

Instrument Rental App

Design Guideline (Material Design 3)

Designed by Tarek Alfutih

Introduction

Requirements:

Design an app that musicians can use to rent or borrow stuff from each other according according to the description below.

Some musicians tend to collect many instruments in their search for the perfect set-up. At the same time others might be looking for something to use for a limited period of time or just want to try out new things. Having a lot of instruments that only collect dust is not a very good way to make money and buying new things all the time is very costly. A smart and sustainable solution could be if you could simply rent what you need for a period of time and also let others rent things you have but don't really need currently. Another possibility could be to just trade things for free.

The company PlayRent has decided to create an app for this market and to first focus on Material design. The task is to create a design of the user interface that can be handed over to the development team for implementation.

After investigations of the market, interviews with potential users and so on they have decided to initially include the following categories of products for rent in their app:

Drums

- Woodwinds
- Brass
- String instruments
- Keyboards

In the **Woodwinds** category they have decided to include the following sub-categories

- Flutes
- Recorders
- Clarinets
- Oboes
- Saxophones
- Bassoons

The following features should be available in the app (apart from navigating through the available items):

- Searching for objects to rent
- Publishing instruments for others to rent
- Viewing the price of an item
- Being able to see when the item is available for rent
- Finding the shortest and longest period of rent (0-24 months)
- View a picture of the item you wish to rent
- Read a short description of the item you wish to rent

If one decides to rent an item it must be possible to provide necessary information. This includes at least name, address, phone number and credit card details. The app should store these so that you do not have to provide the information again next time. When you want to offer an object for others to rent you must be able to enter all the information that is required about an item listed above.

Description

The document describe the visual and interaction guidelines for the Instrument Renal App calls “PlayRent”.

The layout is based on Material Design 3 (MD3) that is means all components, fonts and colours had imported from the (MD3) library.

The guideline explains the overall structure, navigation between pages, interactions, reusable components, and the reason behind the layout.

Breakdown:

Who? Defining Users:

- People who need instruments for limited time.
- Instrument owners who want to rent out instruments because they do not want to use it for specific periods.
- Someone who want to trade instruments instead of renting.

What? An app that connects people to share the instrument through renting or trading.

Why? For many reasons some of them:

- Saving costs for people who can not buy instruments or need to use them for limited time.
- To let people use instruments that did not be used for long or short time.
- Building connection between musicians and people.

When? When someone needs an instrument for a short time or even for longer time up to 24 months or someone wants to lend one out.

Design System overview

Colours:

Briefly describe M3/sys/dark group which included Primary, secondary, surface colours. The app's colour scheme in dark mode supports readability. <https://m3.material.io/styles/color/system/overview>

Typography:

The material type roles has been used which included headline, title, body and more, all from M3. <https://m3.material.io/styles/typography/overview>

Grid, Spacing:

rewrite better: Following MD3 rules will be explained in detail when describing the design elements later.

Components:

All components were imported and reused from Material Design 3 (MD3), with the variable mode set to dark and sourced from the Figma library. Any additional custom components will be clearly defined along with the reasons for their use.

Shared Components:

- 1. Navigation bar:** Navigation bars provide access to five destinations. it is positioned at the bottom of windows for convenient access. Each destination is represented by an icon and label text. One navigation destination is always active. When a navigation bar icon is tapped or focused, people are taken to the navigation destination associated with that icon. All icons into navigation bar have a uniform size of 24×24 dp. See figure 1. For more detailed : <https://m3.material.io/components/navigation-bar/guidelines>

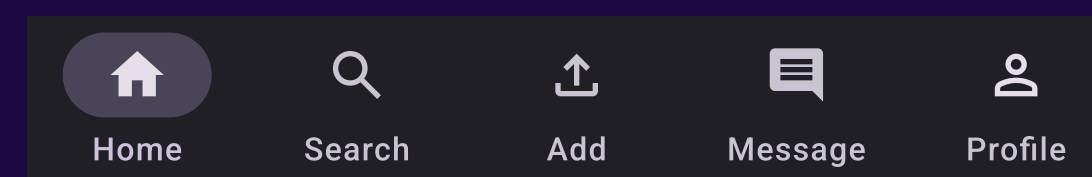

Figure 1

- 2. Search bar:** Imported from MD3 library. It located always on the top of window under the status-bar. it has place holder text: Search instruments ... in order to guid the user to write any searching words into the search bar. In addition it has search icon on right side. Search is a navigation method that allows people to quickly find information across an app. User input a query into the search bar or text field of the search view and then see related results. See figure 2 and for more detailed : <https://m3.material.io/components/search/guidelines>

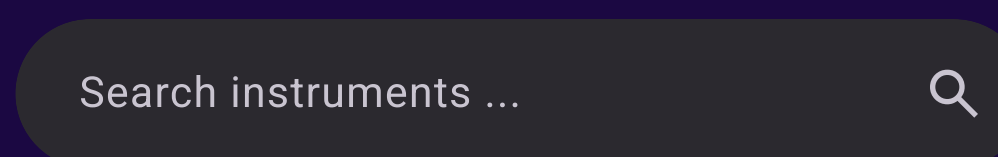

Figure 2

- 3. Custom Stacked Card:** A modified version of the Stacked Card from Material Design 3 (MD3) was used to display items in the search result list. The card consists of two sections:
 - The top section displays an image of the instrument.
 - The bottom section contains text content, including the title and subhead.

Both text styles use M3 Small Body typography. The title colour is M3/sys/dark/on-surface, while the subhead colour is M3/sys/dark/primary. Text padding is set to 16 dp. The custom card is optimised for dark mode and follows a two-column grid.

An additional favourite icon has on-secondary-fixed colour and primary filled colour backgrounds placed in the top-right corner, sized 48×48 dp. The overall card height is 244 dp, with the image area 182 dp high and the text area 62 dp high. Corner radius follows MD3 standards with 8 dp rounding. See figure 3.t

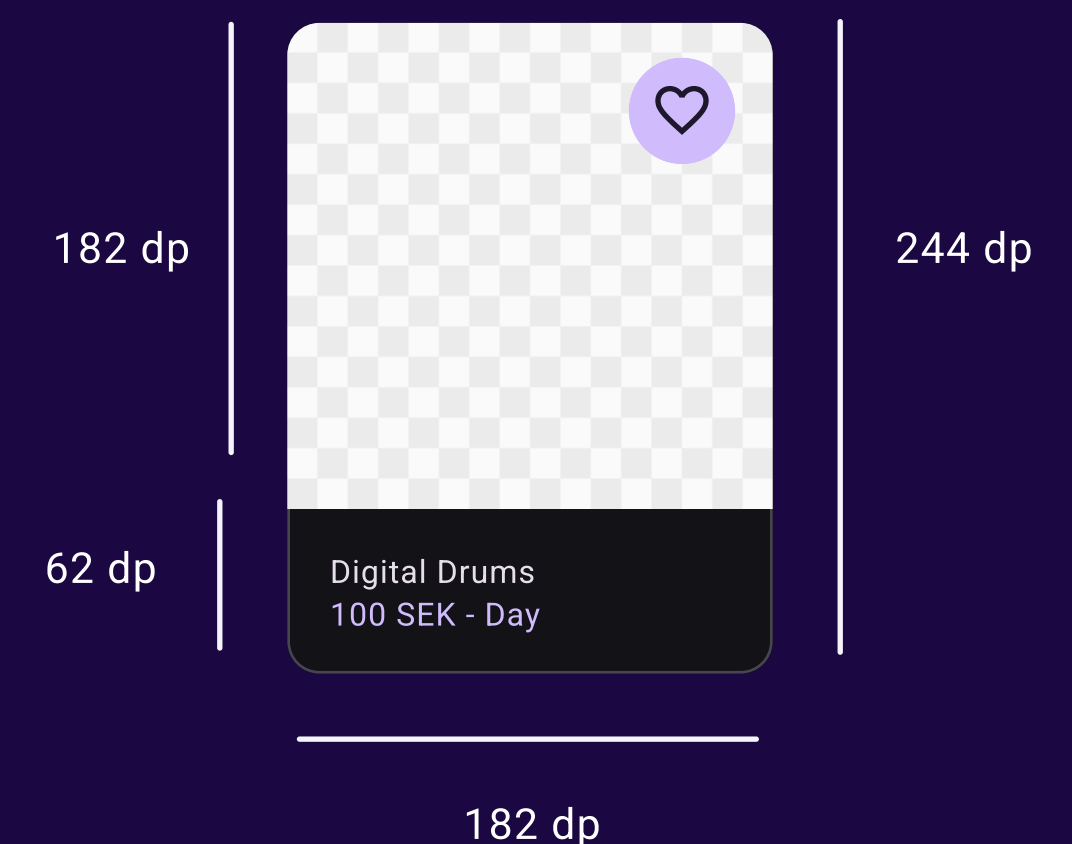

Figure 3

The app frame:

The app frame size is H 412x W917 dp.

The MD3 layout grid was used to follow Material Design 3 spacing recommendations. A layout grid component was placed beneath all elements to ensure proper alignment and consistent spacing.

Each page frame in the app maintains 16 dp margins on both the left and right sides.

DM3: Status-bar component
size: 412 x 52

DM3: Status-bar component
Size: 412 x 24

Log in:

Purpose:

To save user data, a user needs to log in to make a booking, post an advertisement, or chat with other users.

If the user has not created an account, they can click Sign Up.

There is also an option to continue as a guest, which allows users to browse advertisements and explore the app without logging in. However, if they find an ad they are interested in and wish to make a booking, they will need to create an account or log in.

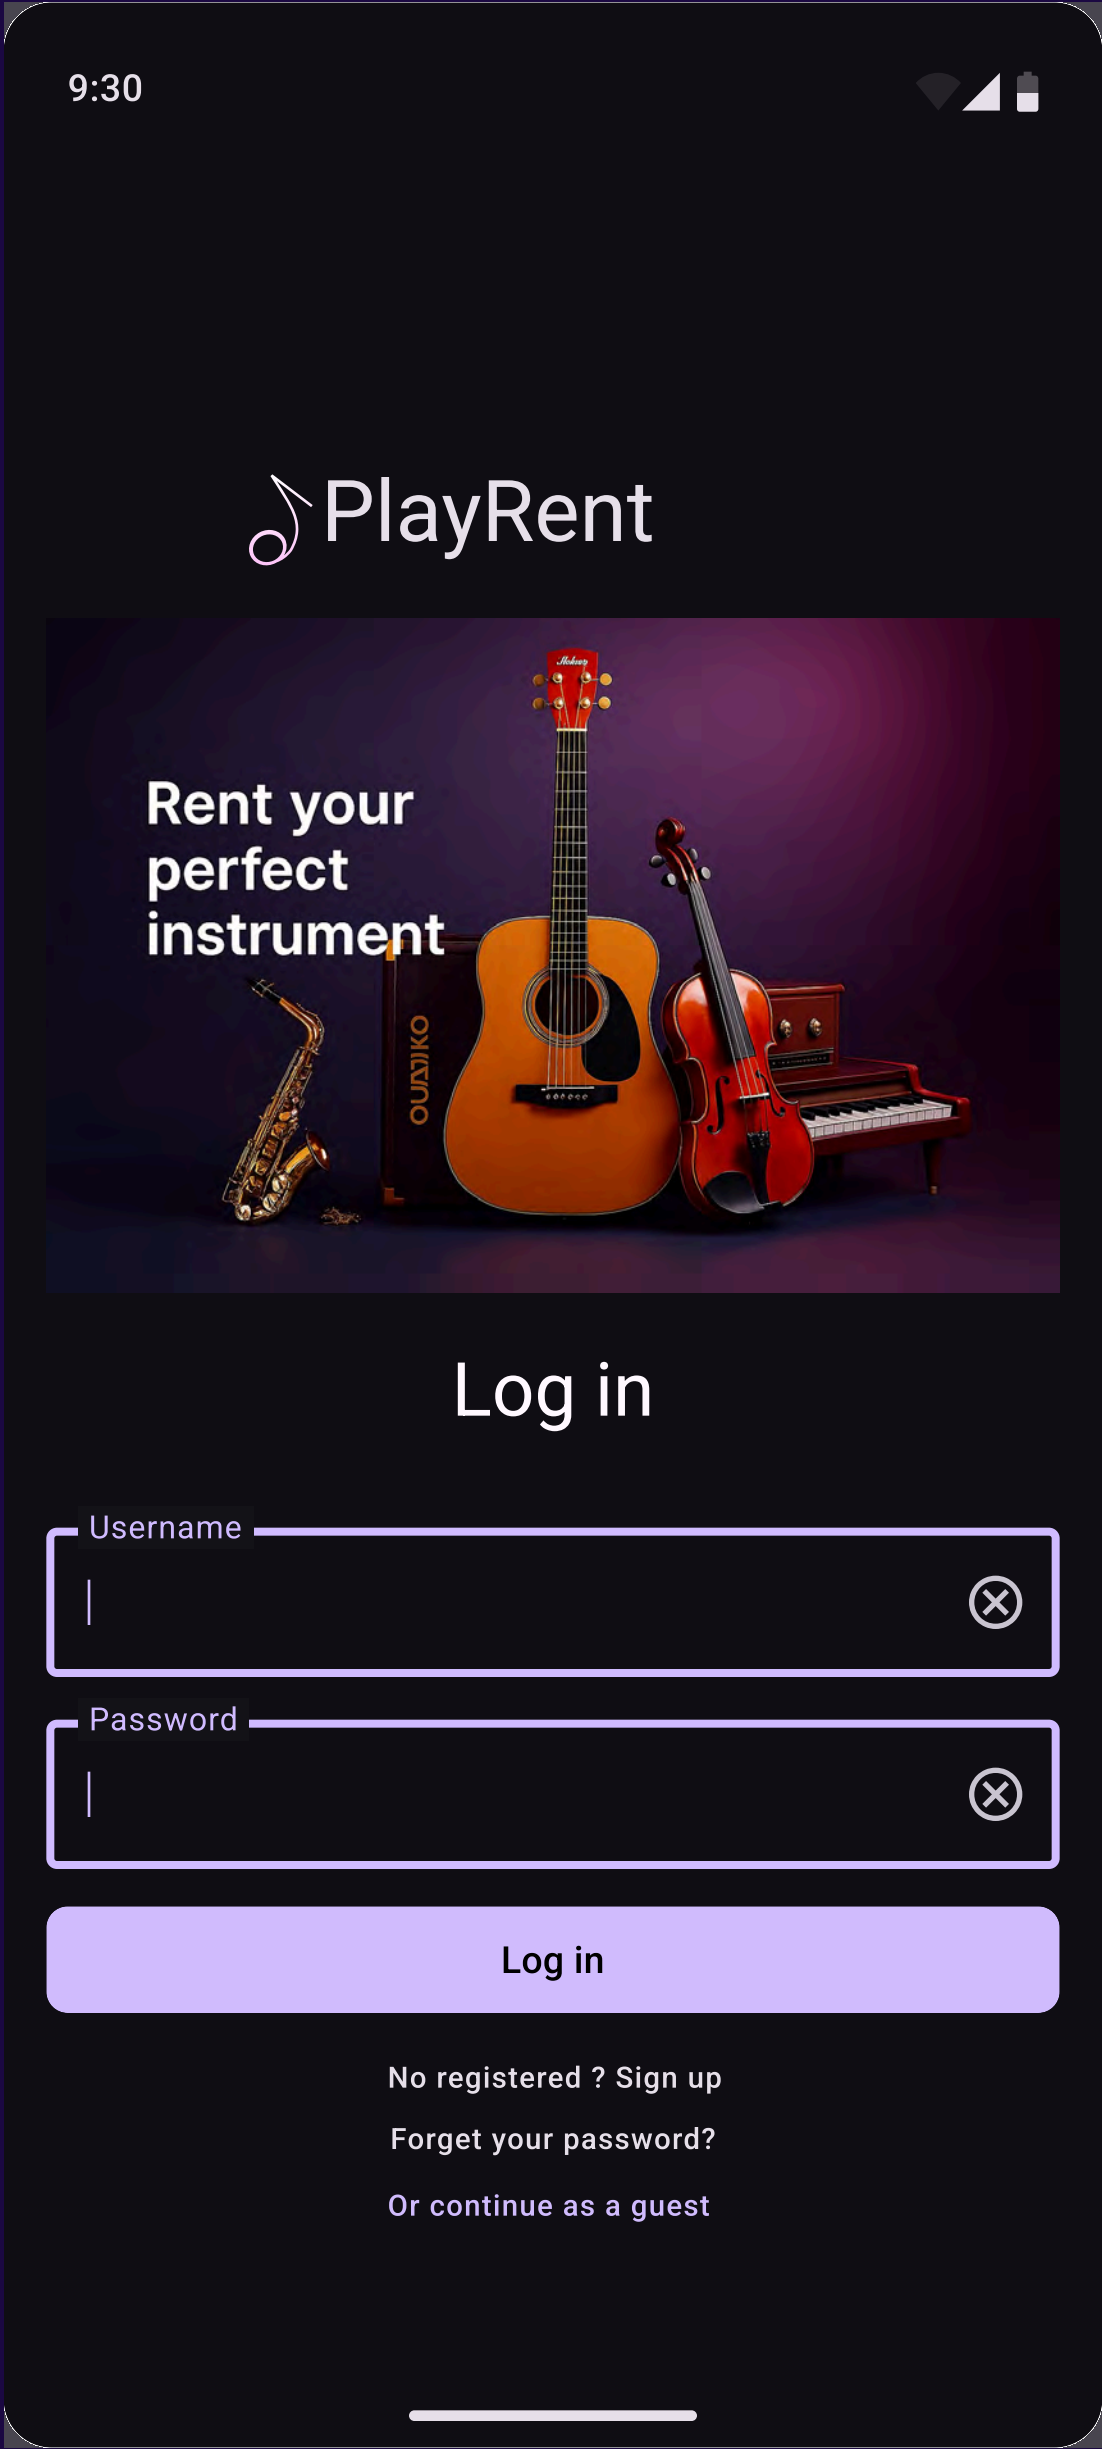

The same applies if a user wants to list an item or contact another user.

Composition: From top to bottom: the logo is placed at the top, with an image below it, separated by 16 dp.

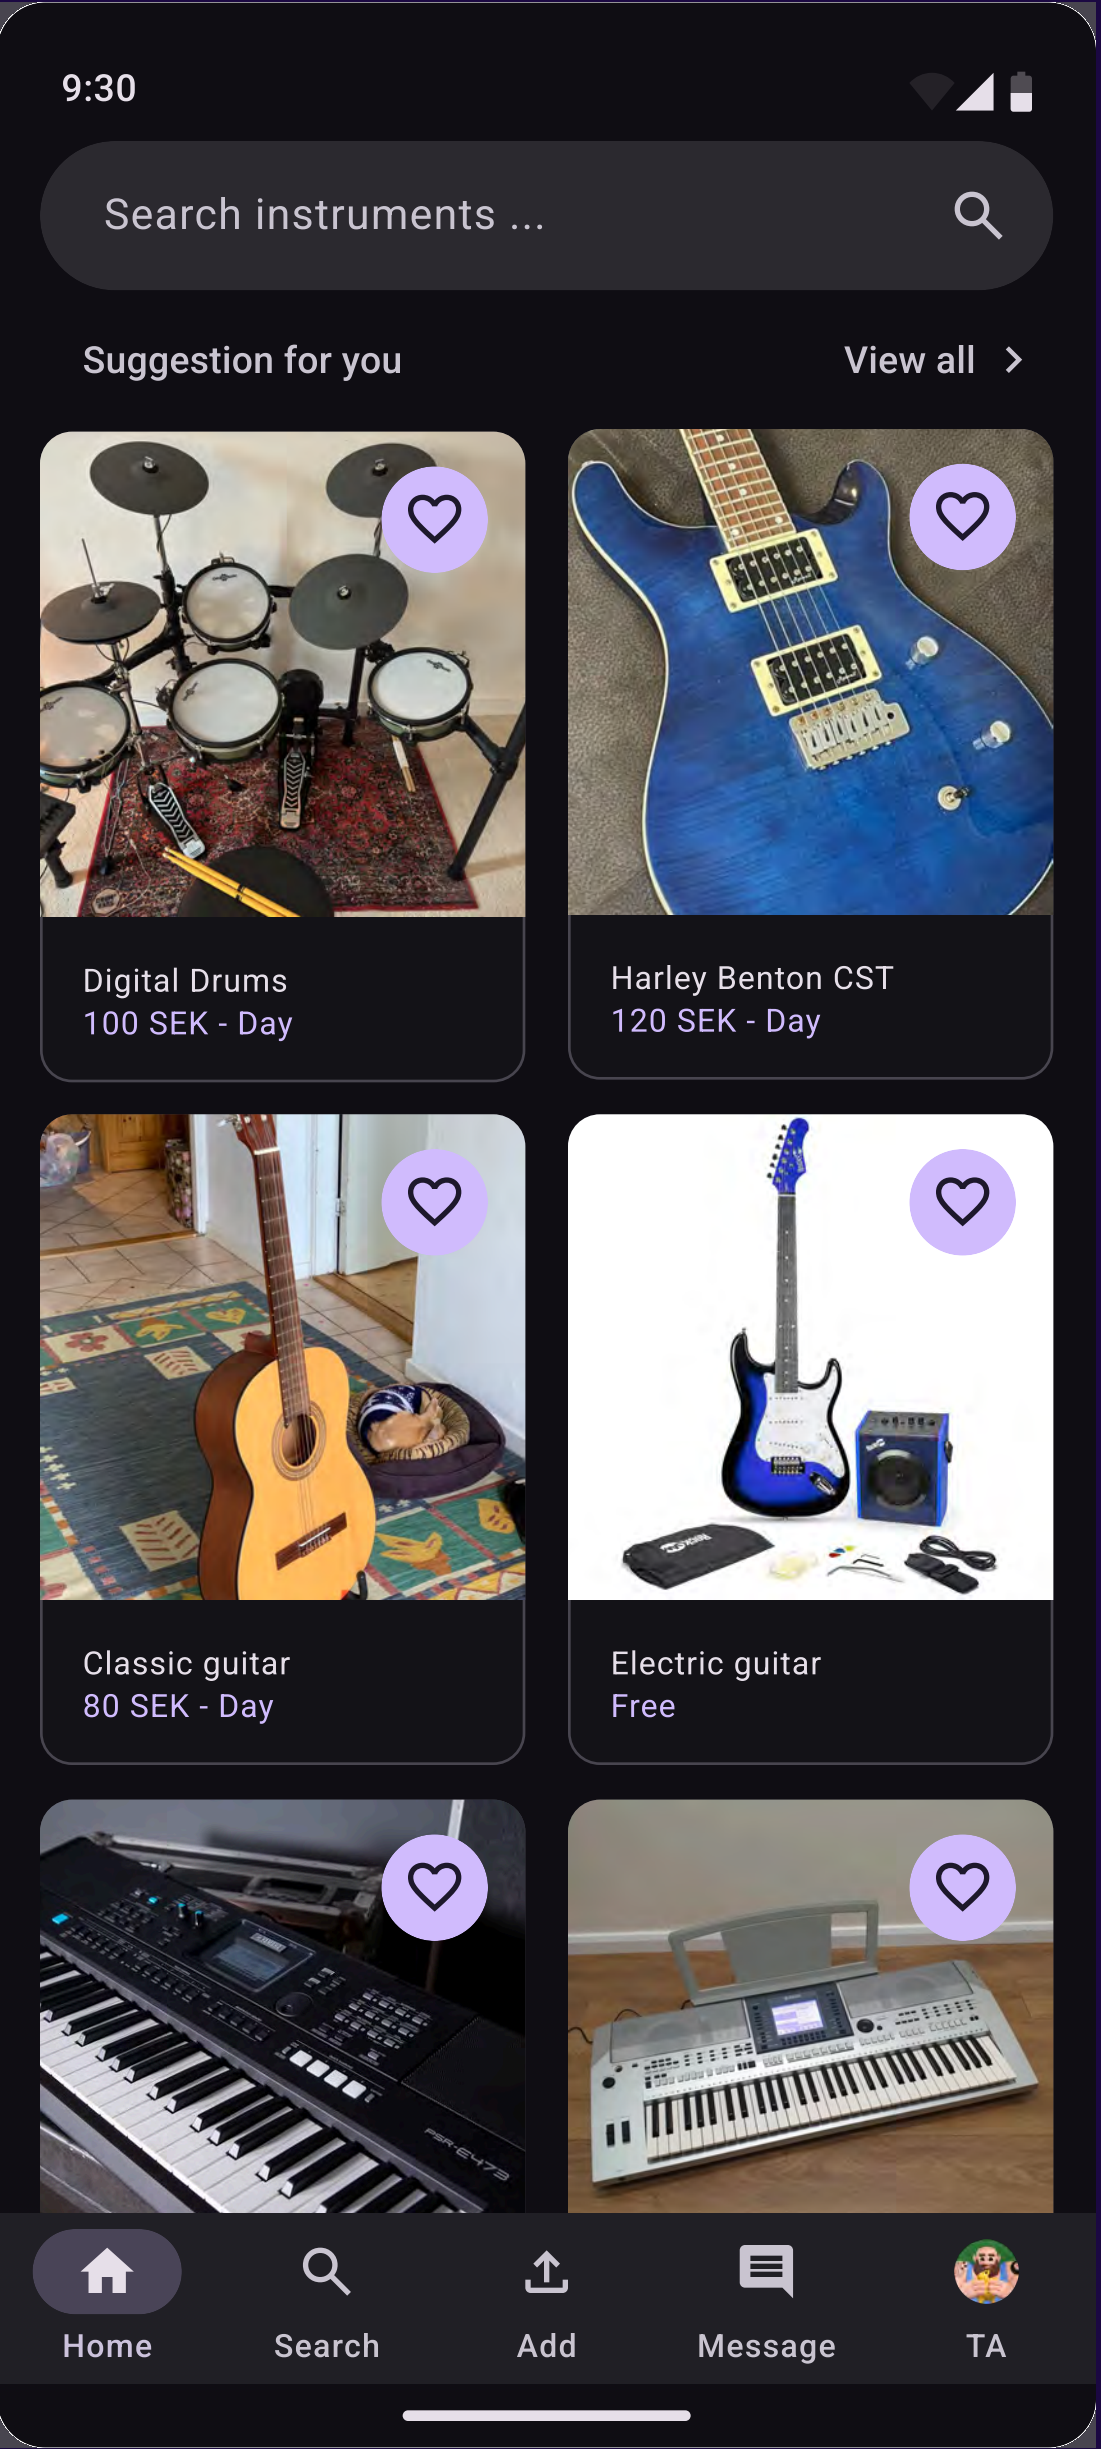

Next, a headline text appears 24 dp below the image, using the on-surface colour.

After another 24 dp, there are two Text Field components from MD3 arranged in a vertical row. Below them, 16 dp apart, there is a small button from MD3 in the primary colour.

Finally, three small label texts, first two have on-surface colour and the the third has primary colour are placed at the bottom, each separated by 8 dp.

After entering the username and the password, the Log in button will lead to the Home page.

Create an account

Purpose:

To create an account, the user needs to fill in all required personal information, including name, email, phone number, personal number, full address, payment details, and a password. Finally, the user must read and accept PlayRent’s User Agreement and Privacy Policy to complete the registration.

The app stores all this information so users don’t need to re-enter it when performing activities such as making bookings, listing ads, or chatting with others. Completing this step once saves time in future interactions.

Additionally, providing the personal number helps verify each user’s identity, ensuring a safer marketplace and preventing scams.

Composition:

This screen follows the Material Design 3 (MD3) guidelines. From top to bottom, a Text Large component is used for the page title. Below it, there are 13 Text Field components in the Outlined style and Enabled state.

The first two fields are placed horizontally beside each other for the first and last name. Below them, five text fields are placed vertically. Then, two text fields are positioned horizontally for the post number and city.

Next, a Text Small component is used as a section label, followed by one horizontal text field, two vertical text fields, and a final horizontal text field.

Below that, there is one List Item (0 Density) with a switch on the right side. Finally, a small MD3 button in the primary color is placed at the bottom of the layout.

All spacing and alignment follow the MD3 spacing and hierarchy rules.

The full list of fields is accessible through vertical scrolling.

User [Agreement](#) and [Privacy Policy](#)

Create account

Purpose:
After filling in all the required information and switching on the button “I accept PlayRent’s User Agreement and Privacy Policy,” the user is directed to another page showing feedback that the account has been created successfully. After a short moment (2,000 ms), the system automatically redirects the user to the home page.

Composition:
On the feedback page, there is a logo title centered at the top. Below it, with a spacing of 135 dp, there is an image sized W380 × H253.

Home page

Purpose:

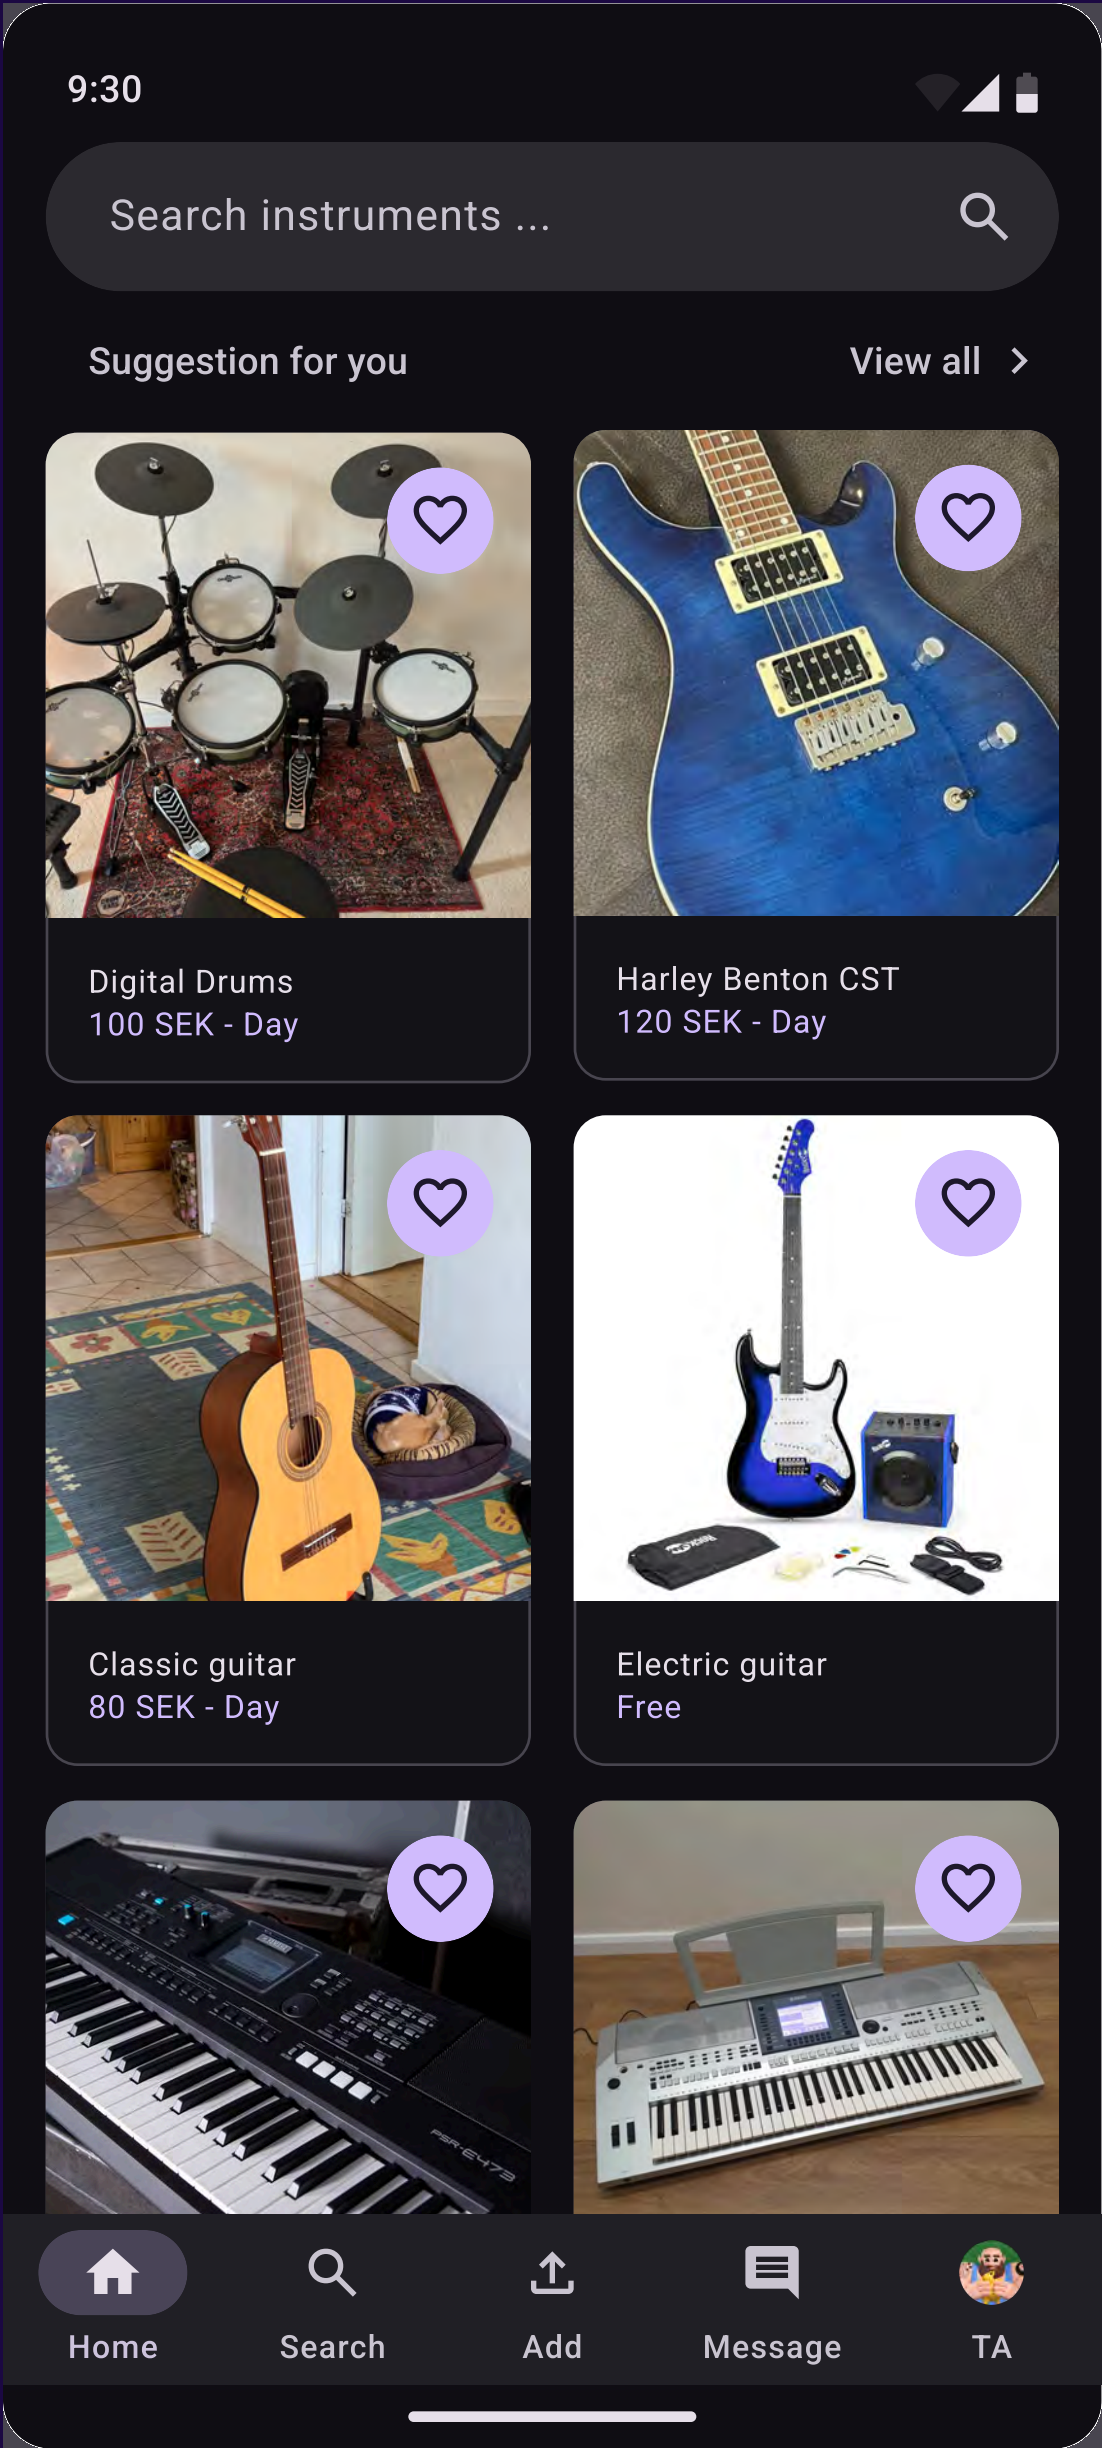

This is the main page where the user can access all other sections of the app. The design includes a search bar at the top for finding advertisements. Below it, there is a suggested ads list containing items from various categories. The app remembers which categories the user has previously visited and suggests new advertisements from those same categories of interest.

On the right side, there is a button with text and an arrow icon, which serves as a simple filter. It allows the user to choose between options such as Show all ads, Show newest first, or Show oldest first. At the bottom, a navigation bar provides access to other sections of the app.

Composition:

A search bar is placed at the top. Below it, on the left side of a horizontal row, there is a navigation item labeled Suggestions for you. On the same row, to the right, there is the button with text and an arrow icon.

Underneath, there are custom stacked cards, arranged two per row vertically. Finally, the navigation bar is positioned at the bottom of the screen.

Choosing an item

Purpose:

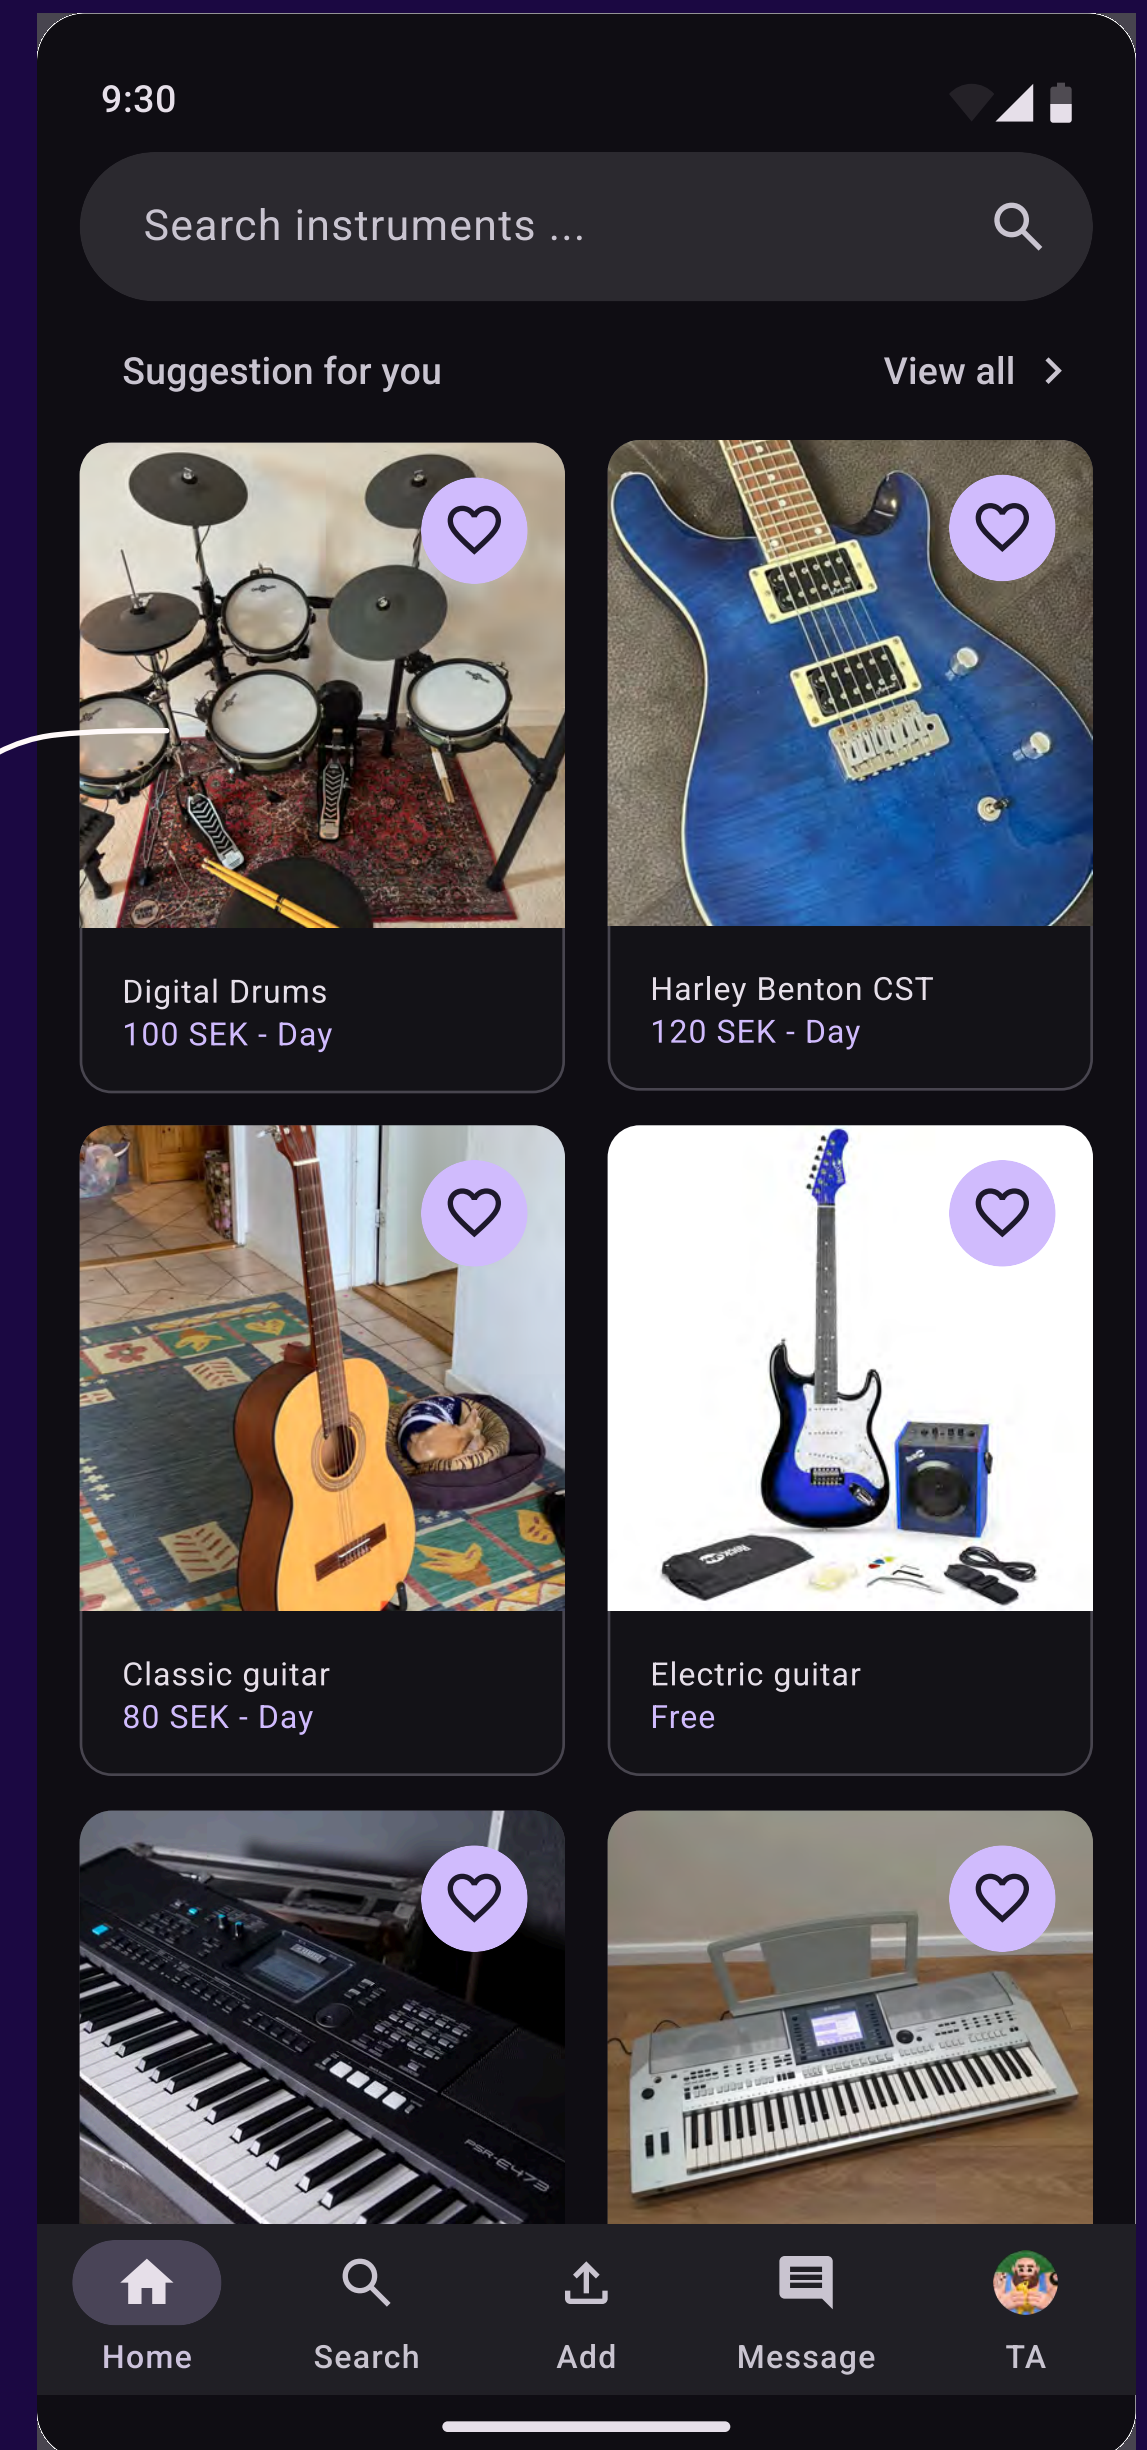

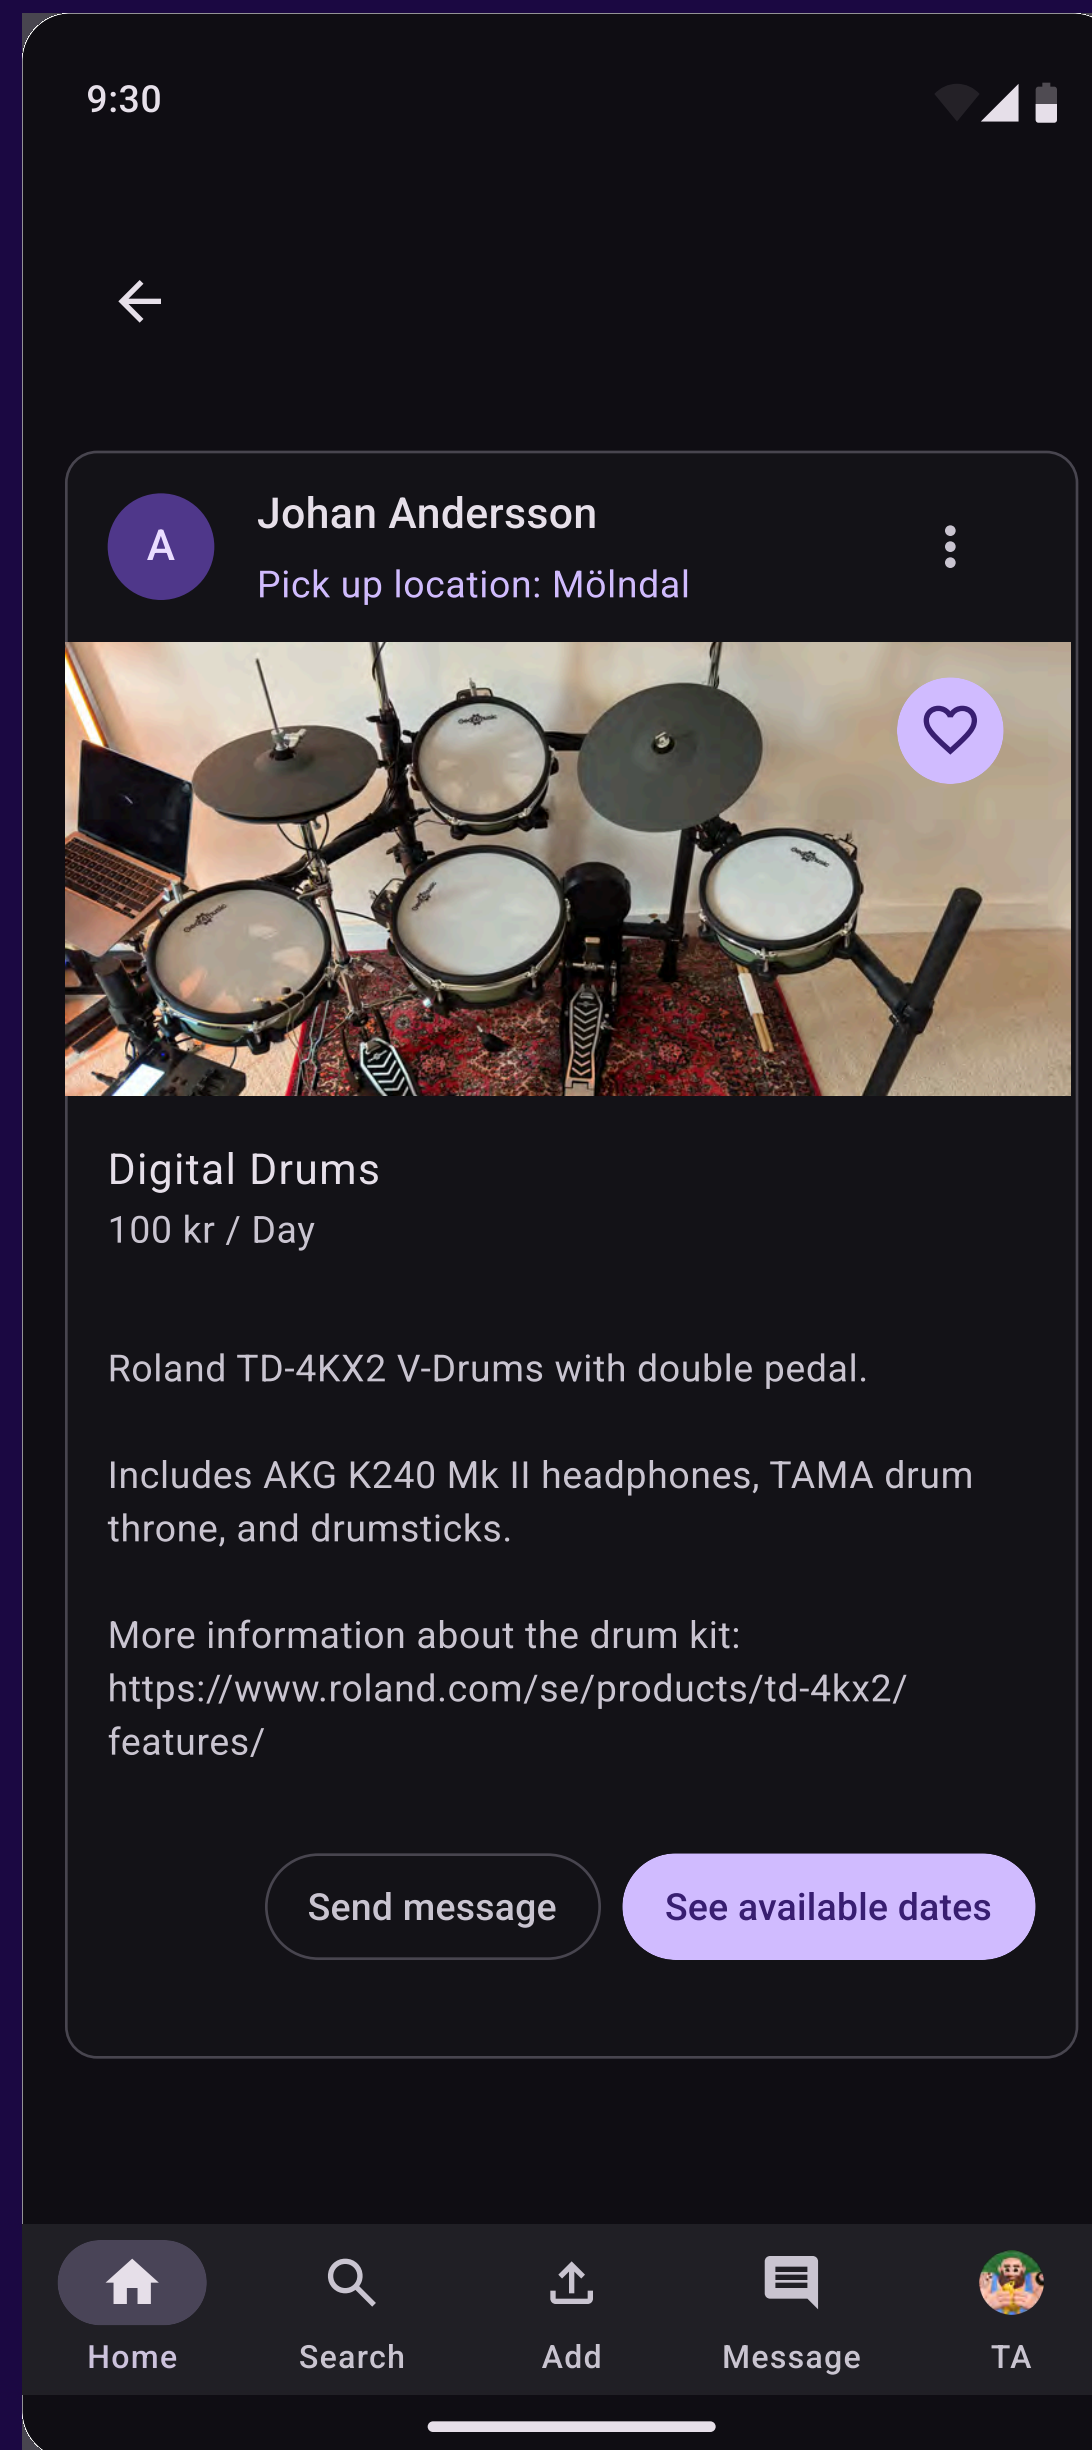

When the user clicks on an ad, the app opens a detailed view of the advertisement. This page provides more photos, allows users to send messages, and displays available booking dates. The user can also see the publisher's name and pickup location.

By clicking Send message, the system navigates to the message section, where the user can ask questions or chat with the owner. By clicking See available dates, the user is taken to the calendar view, which is explained on the next slide.

Composition:

From top to bottom:

- App bar in small configuration with a back arrow icon to return to the previous page.
- Outlined stacked card component with Media & Text layout.
- The secondary action area includes header, subheader, title, subtitle, and supporting text.
- Card width is 380 dp, and height varies depending on the amount of supporting text.
- Two MD3 buttons are placed below the card content following MD3 spacing rules.
- The Navigation Bar component.

See available dates

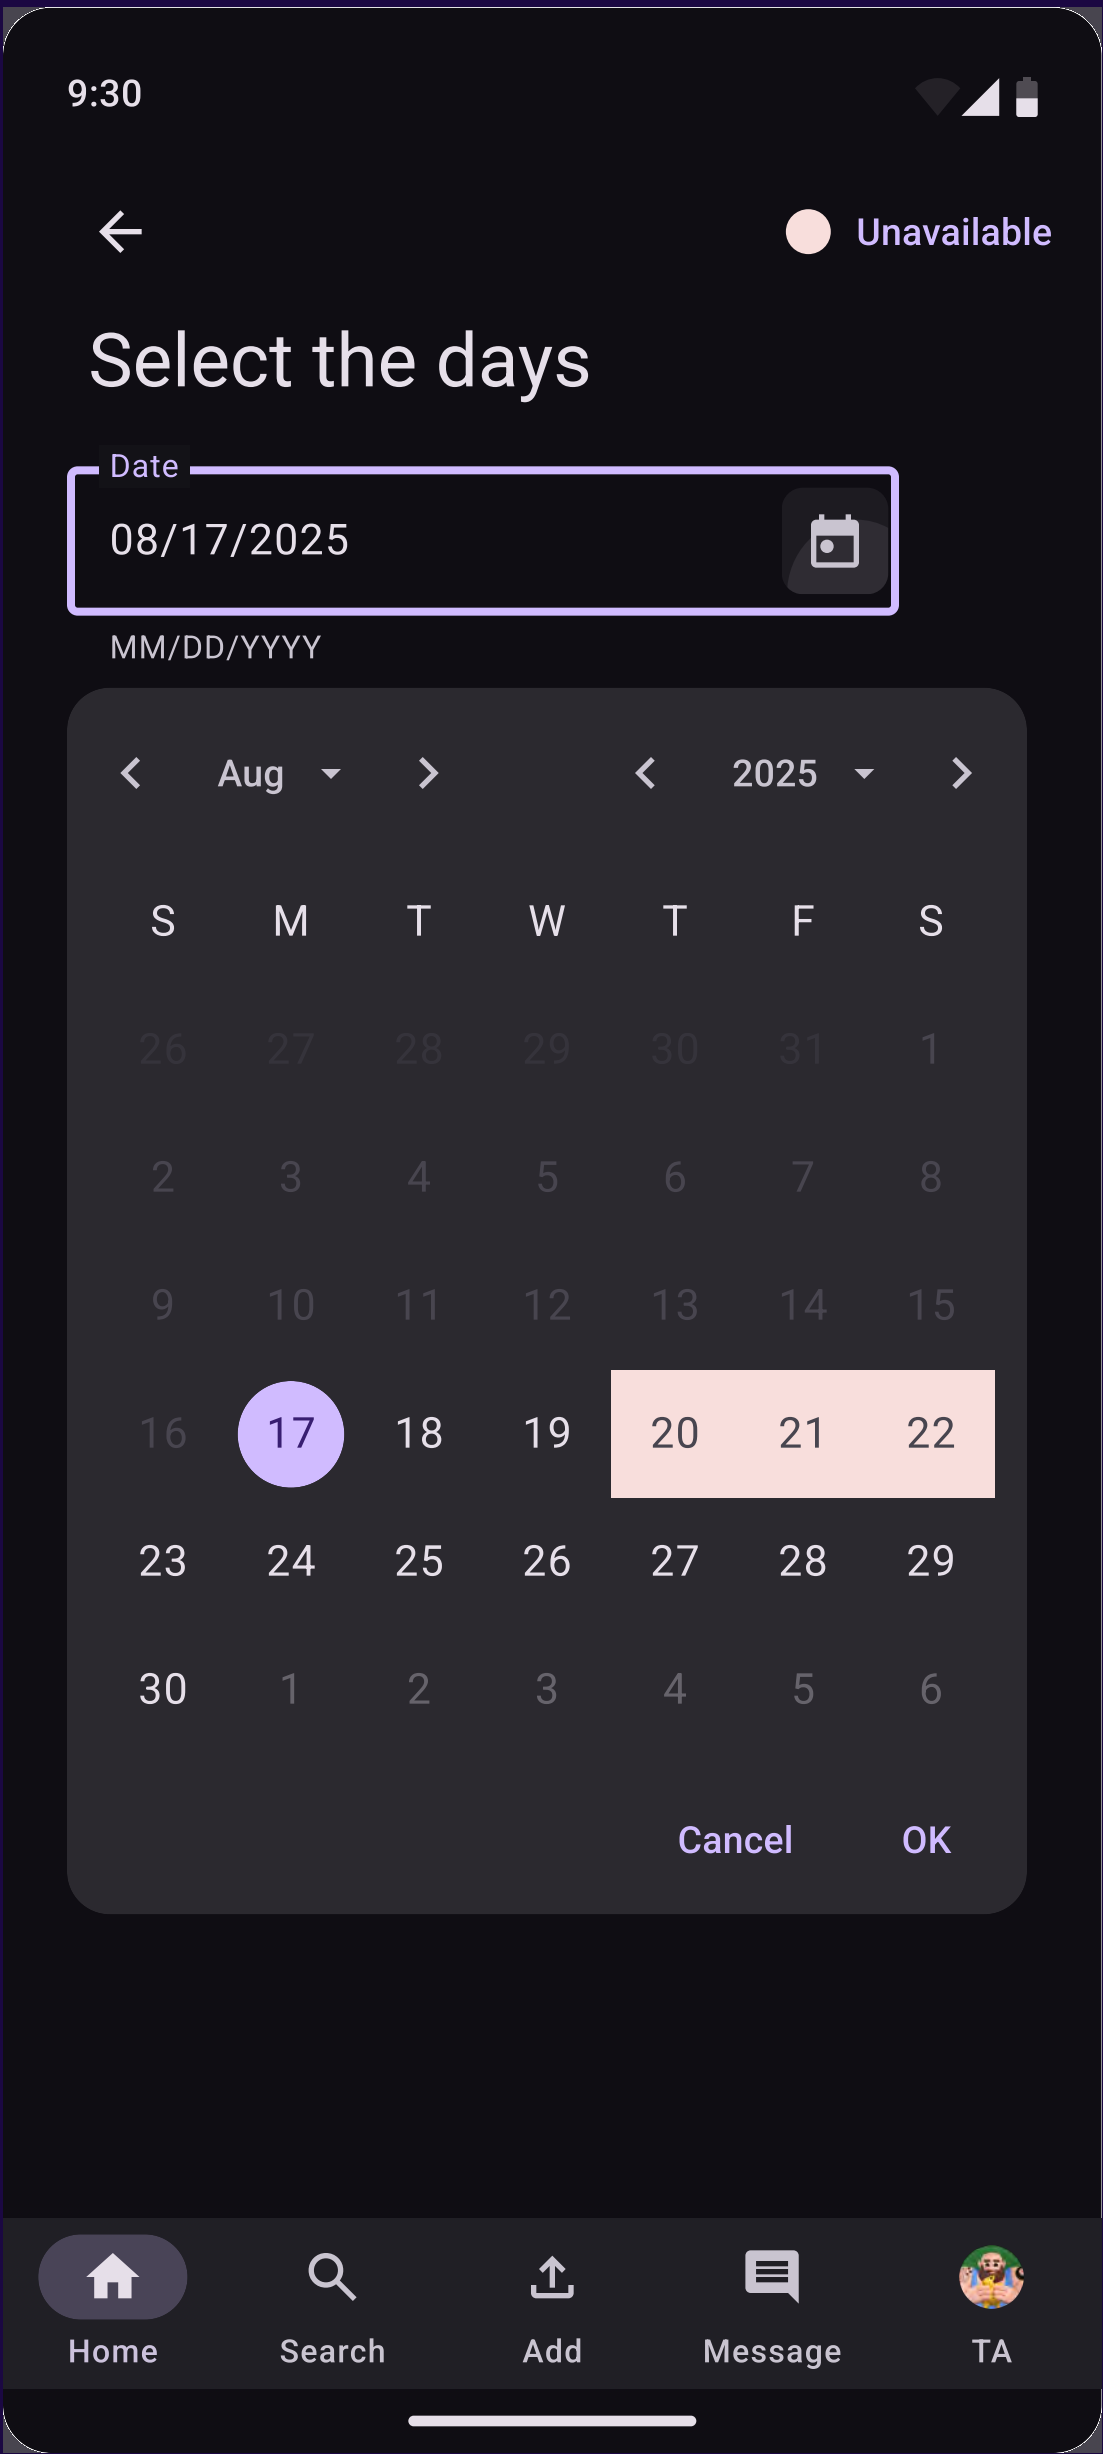

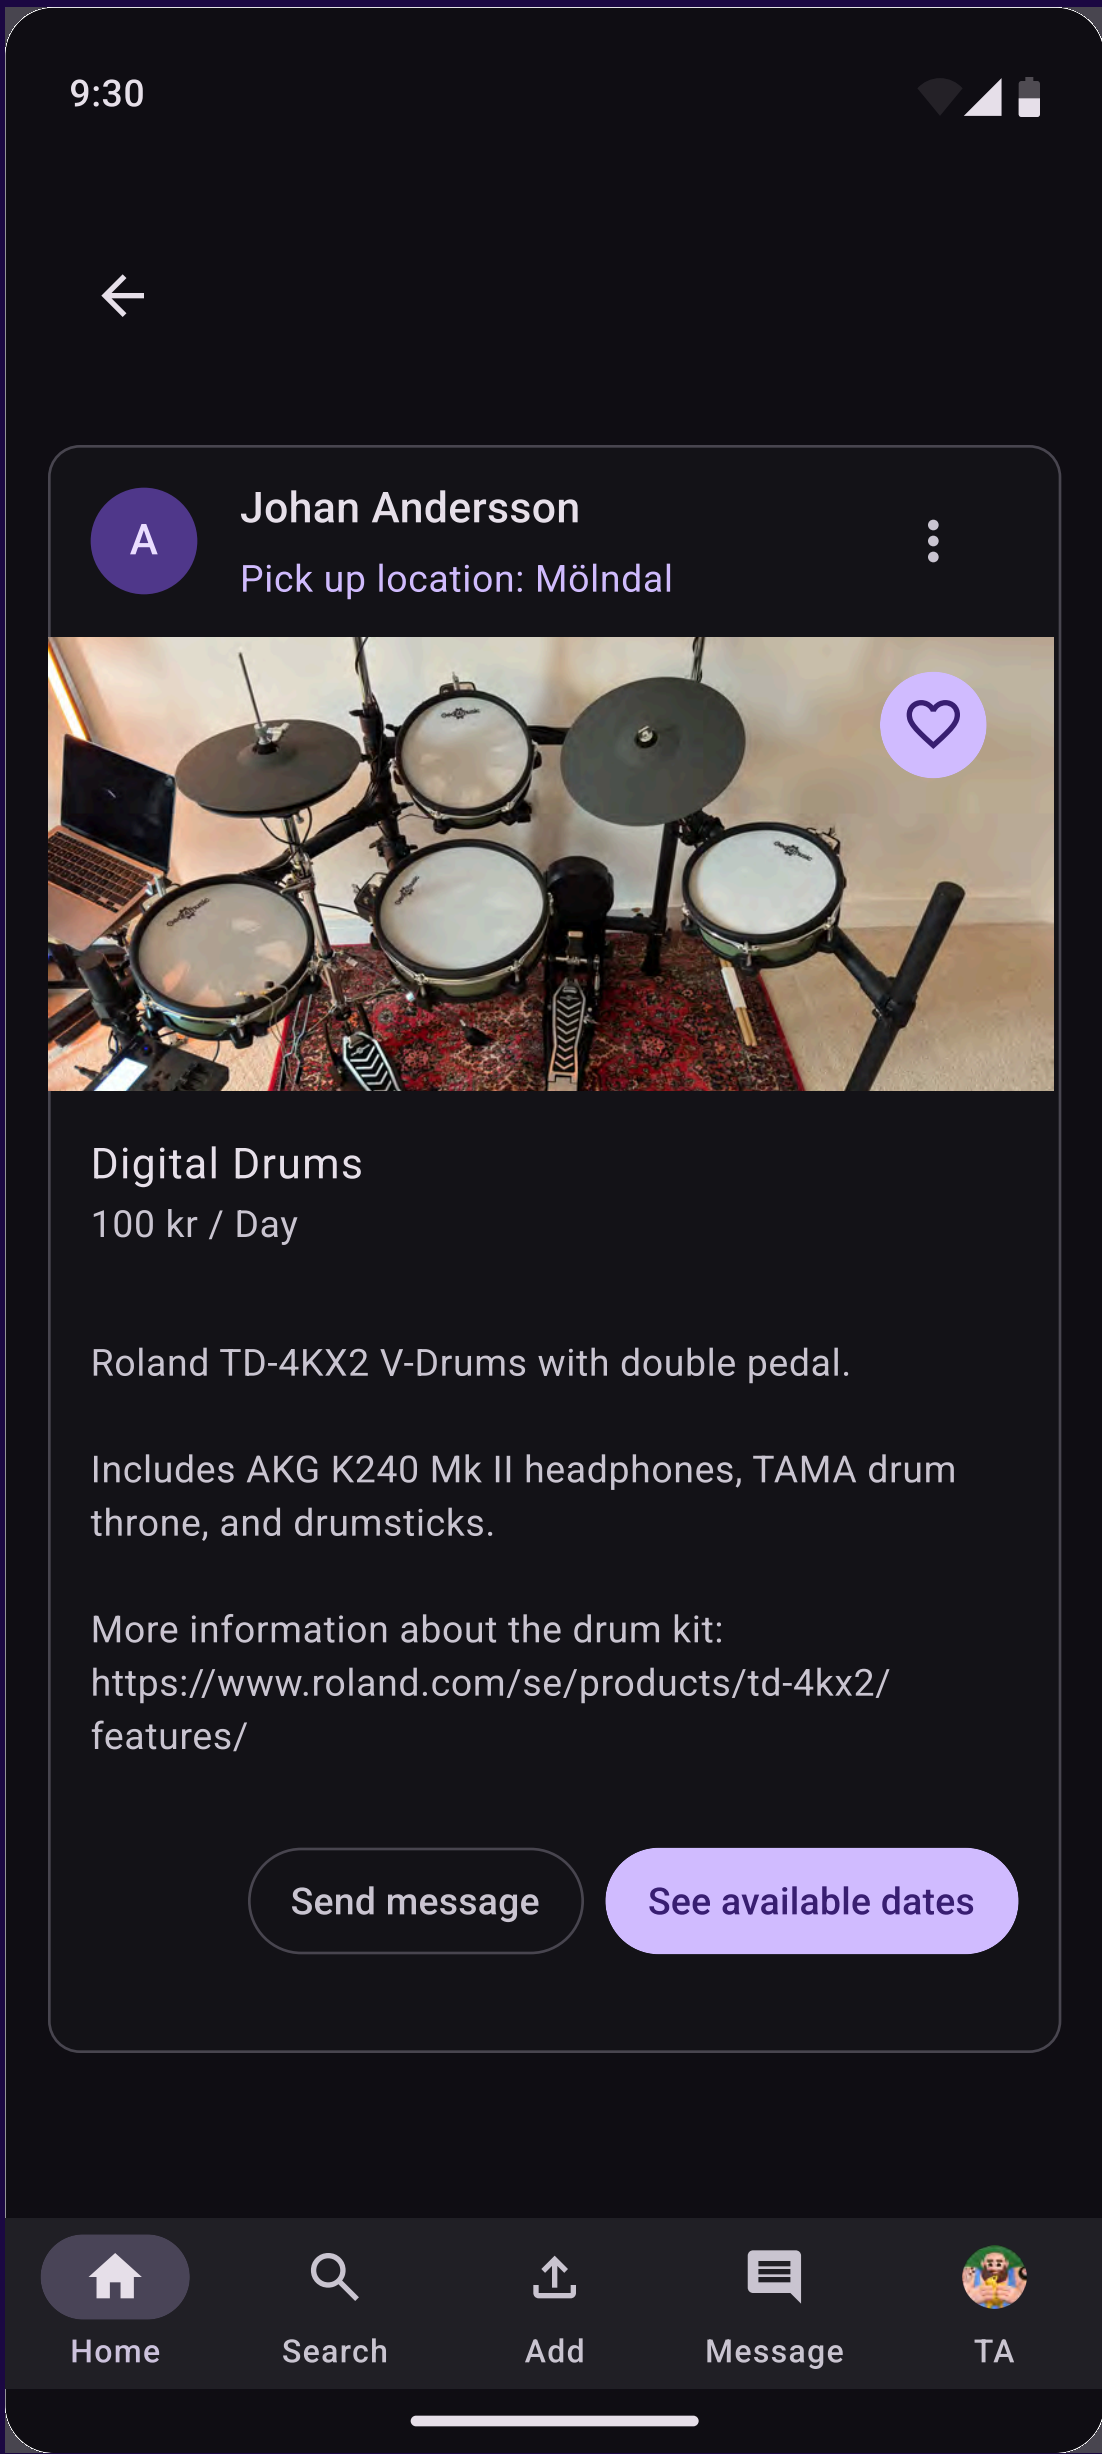

Purpose:

This action will lead to the calendar where the user can select the preferred dates and see when the item is available or not. The system displays availability for up to 24 months.

Composition:

From top to bottom:

- App bar component in small configuration, it includes a back arrow icon to return to the previous page, a headline text that reads “Select the days,” and, on the right side, a Small Text Button component with an icon in on-error-container colour and square shape.
- Edited Docked input date picker component. The part was edited is to delete all years list that over 2027 to be insure that the calendar is limited up to two years only not more.
- The Navigation Bar component.
- See figure 4.

Docked Input Date Picker [desktop]

❖ Docked input date picker [desktop]

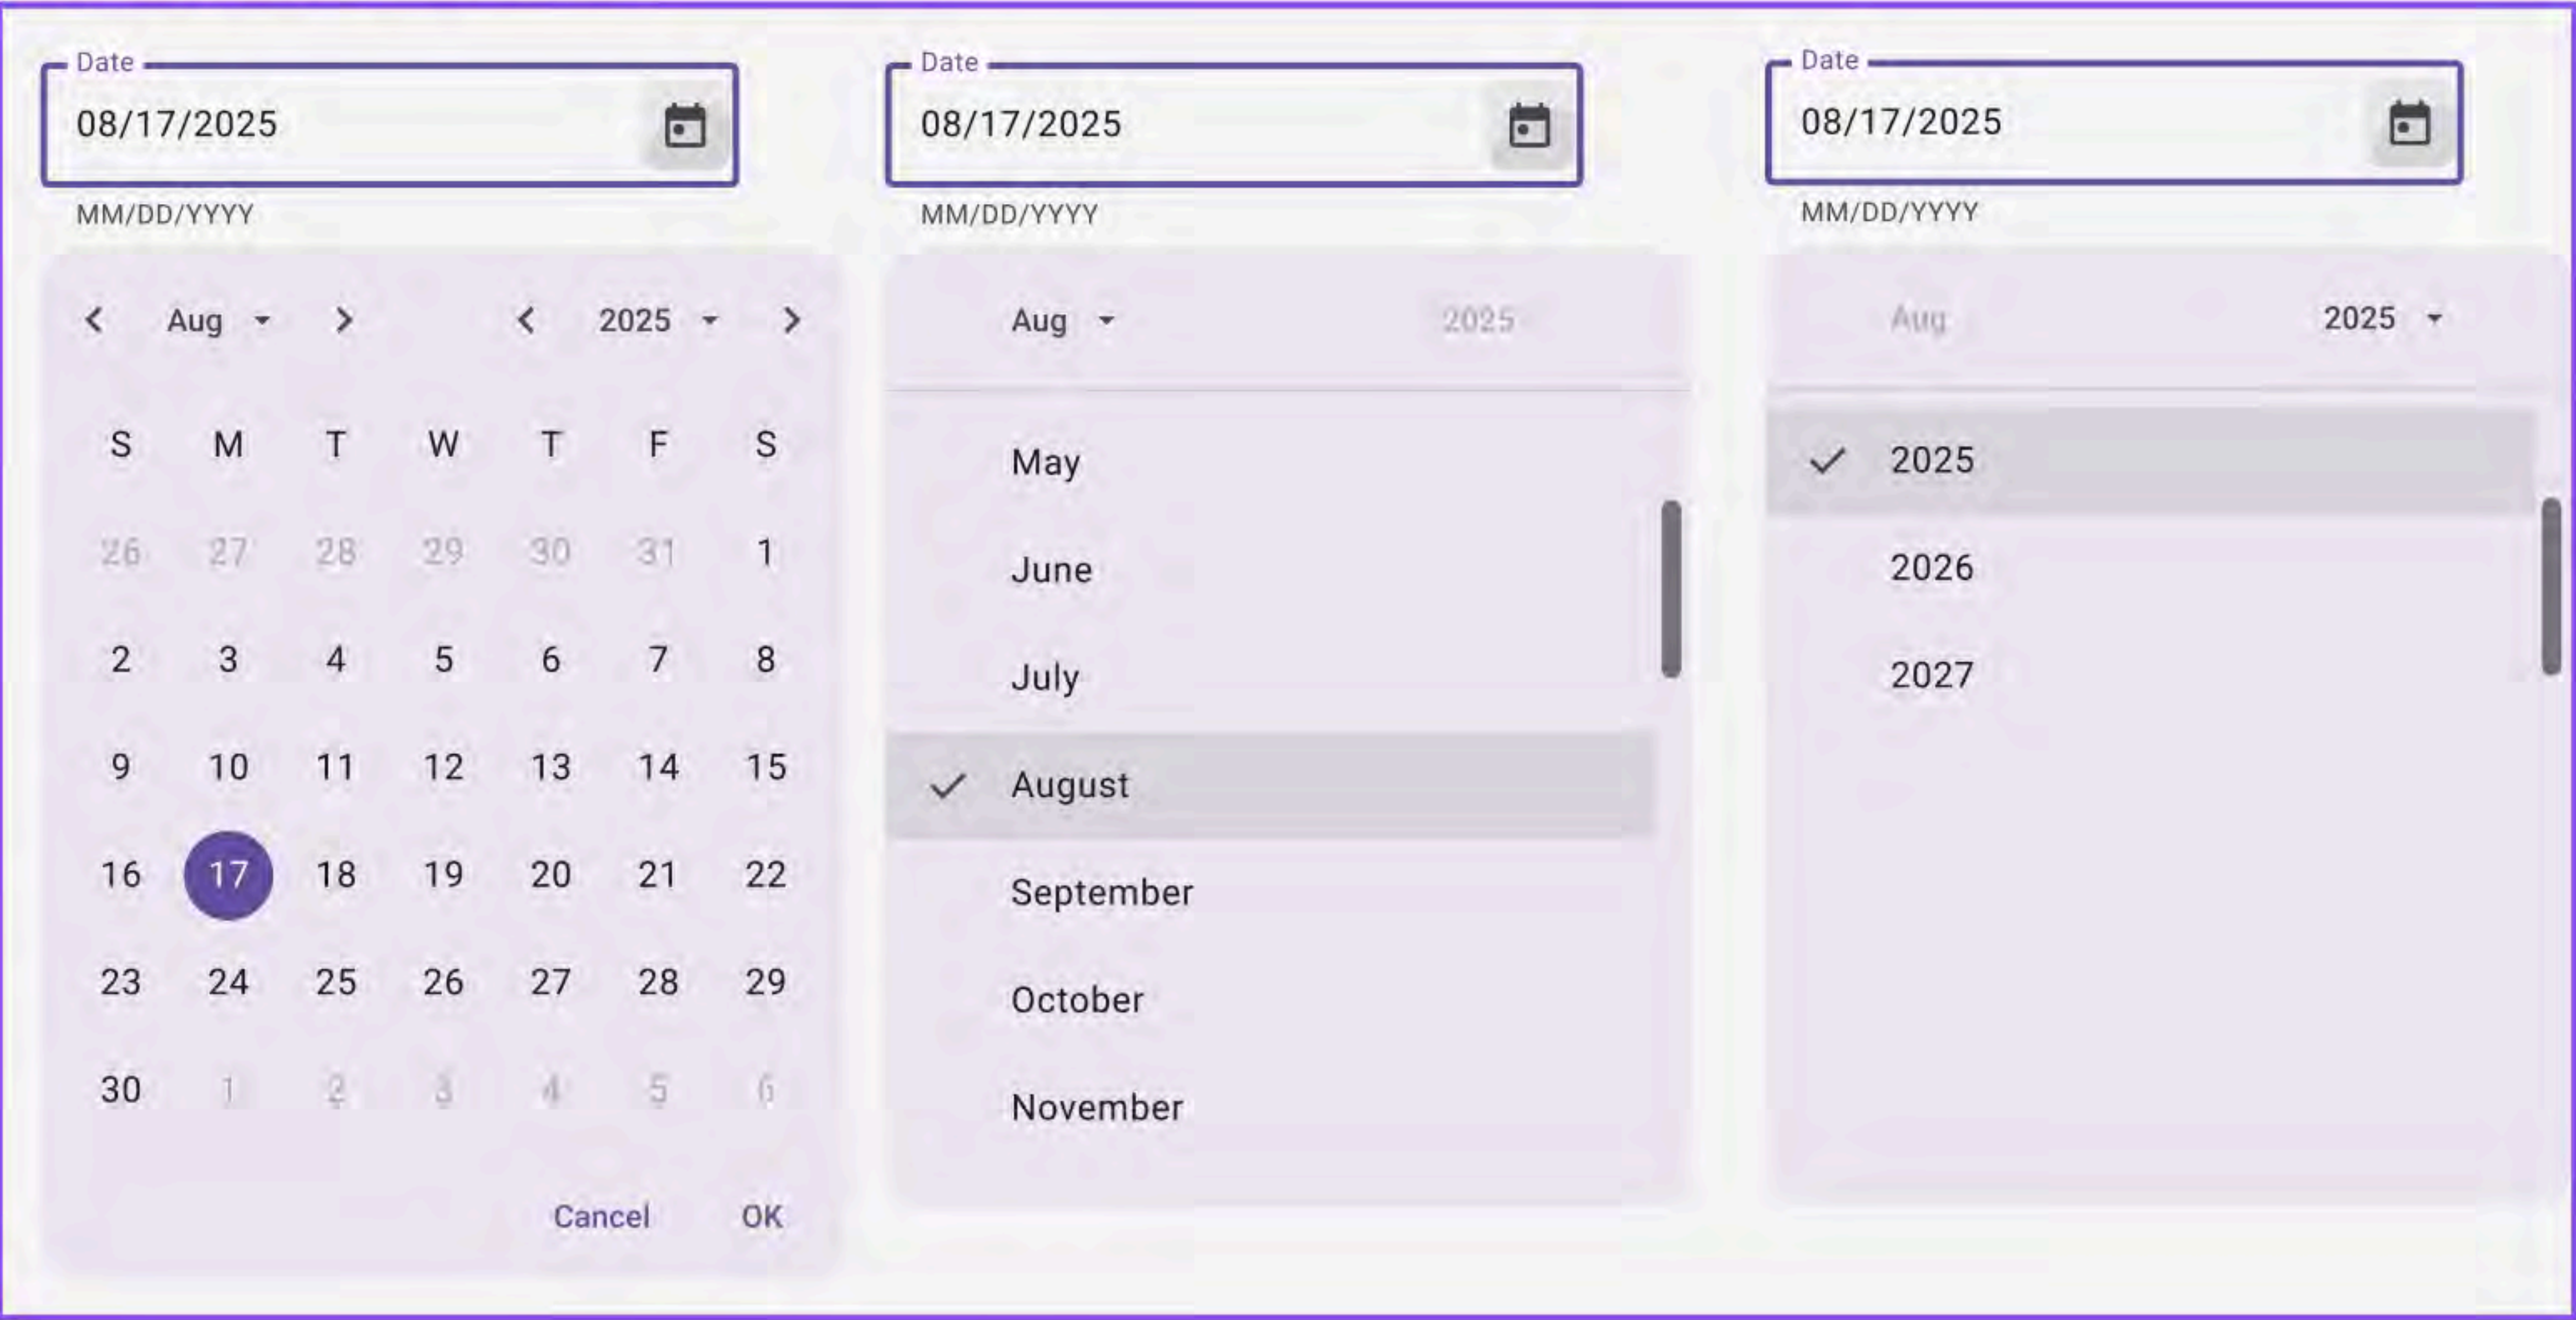

Figure 4: Screen shut from the edited Docked Input Date Picker component MD3

Book and Confirm Booking

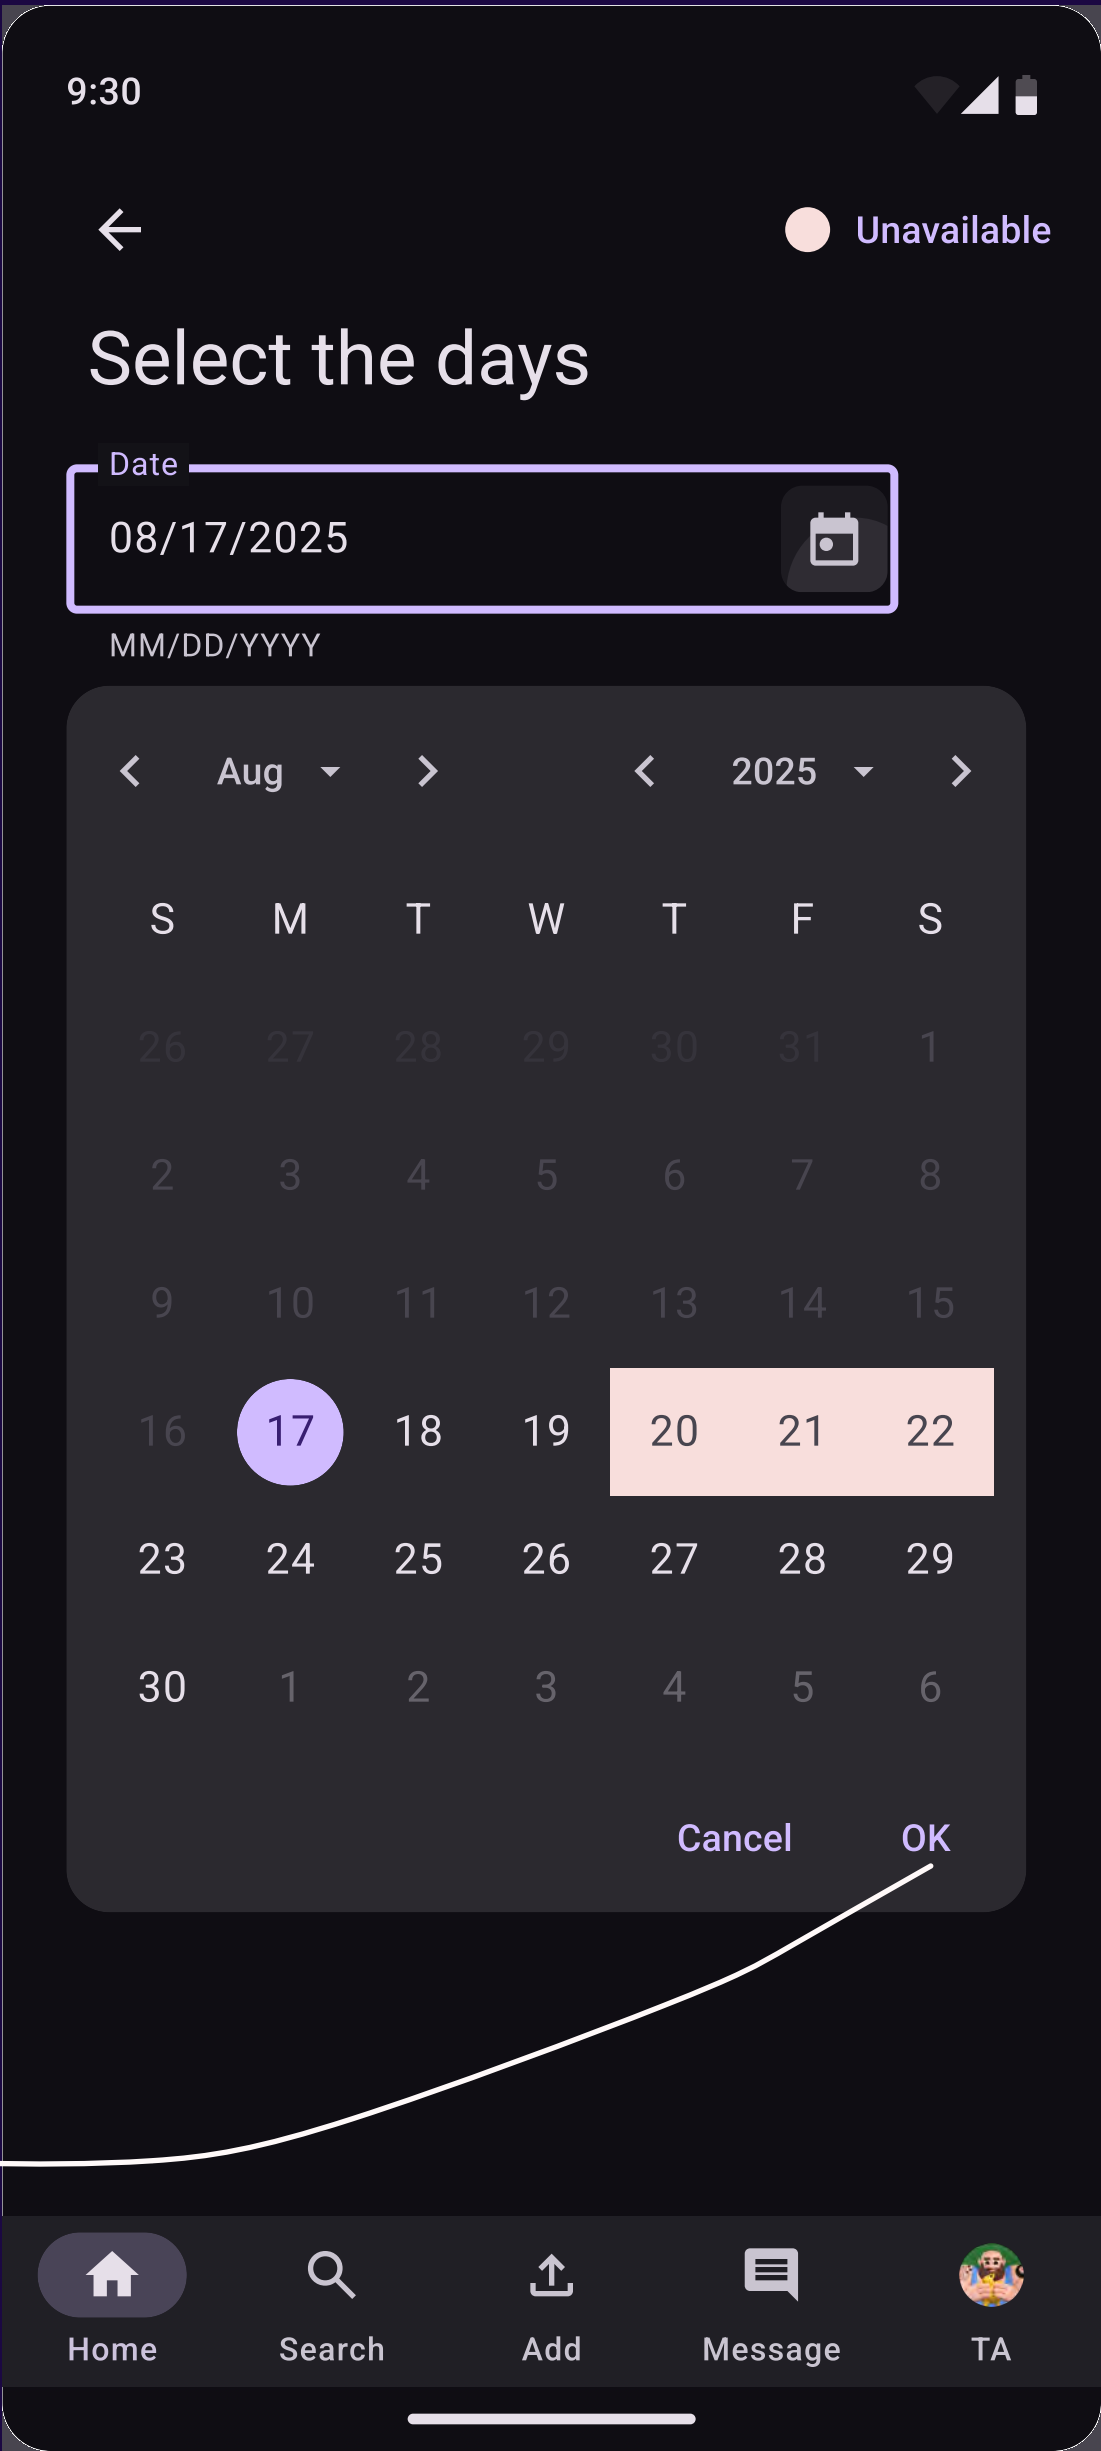

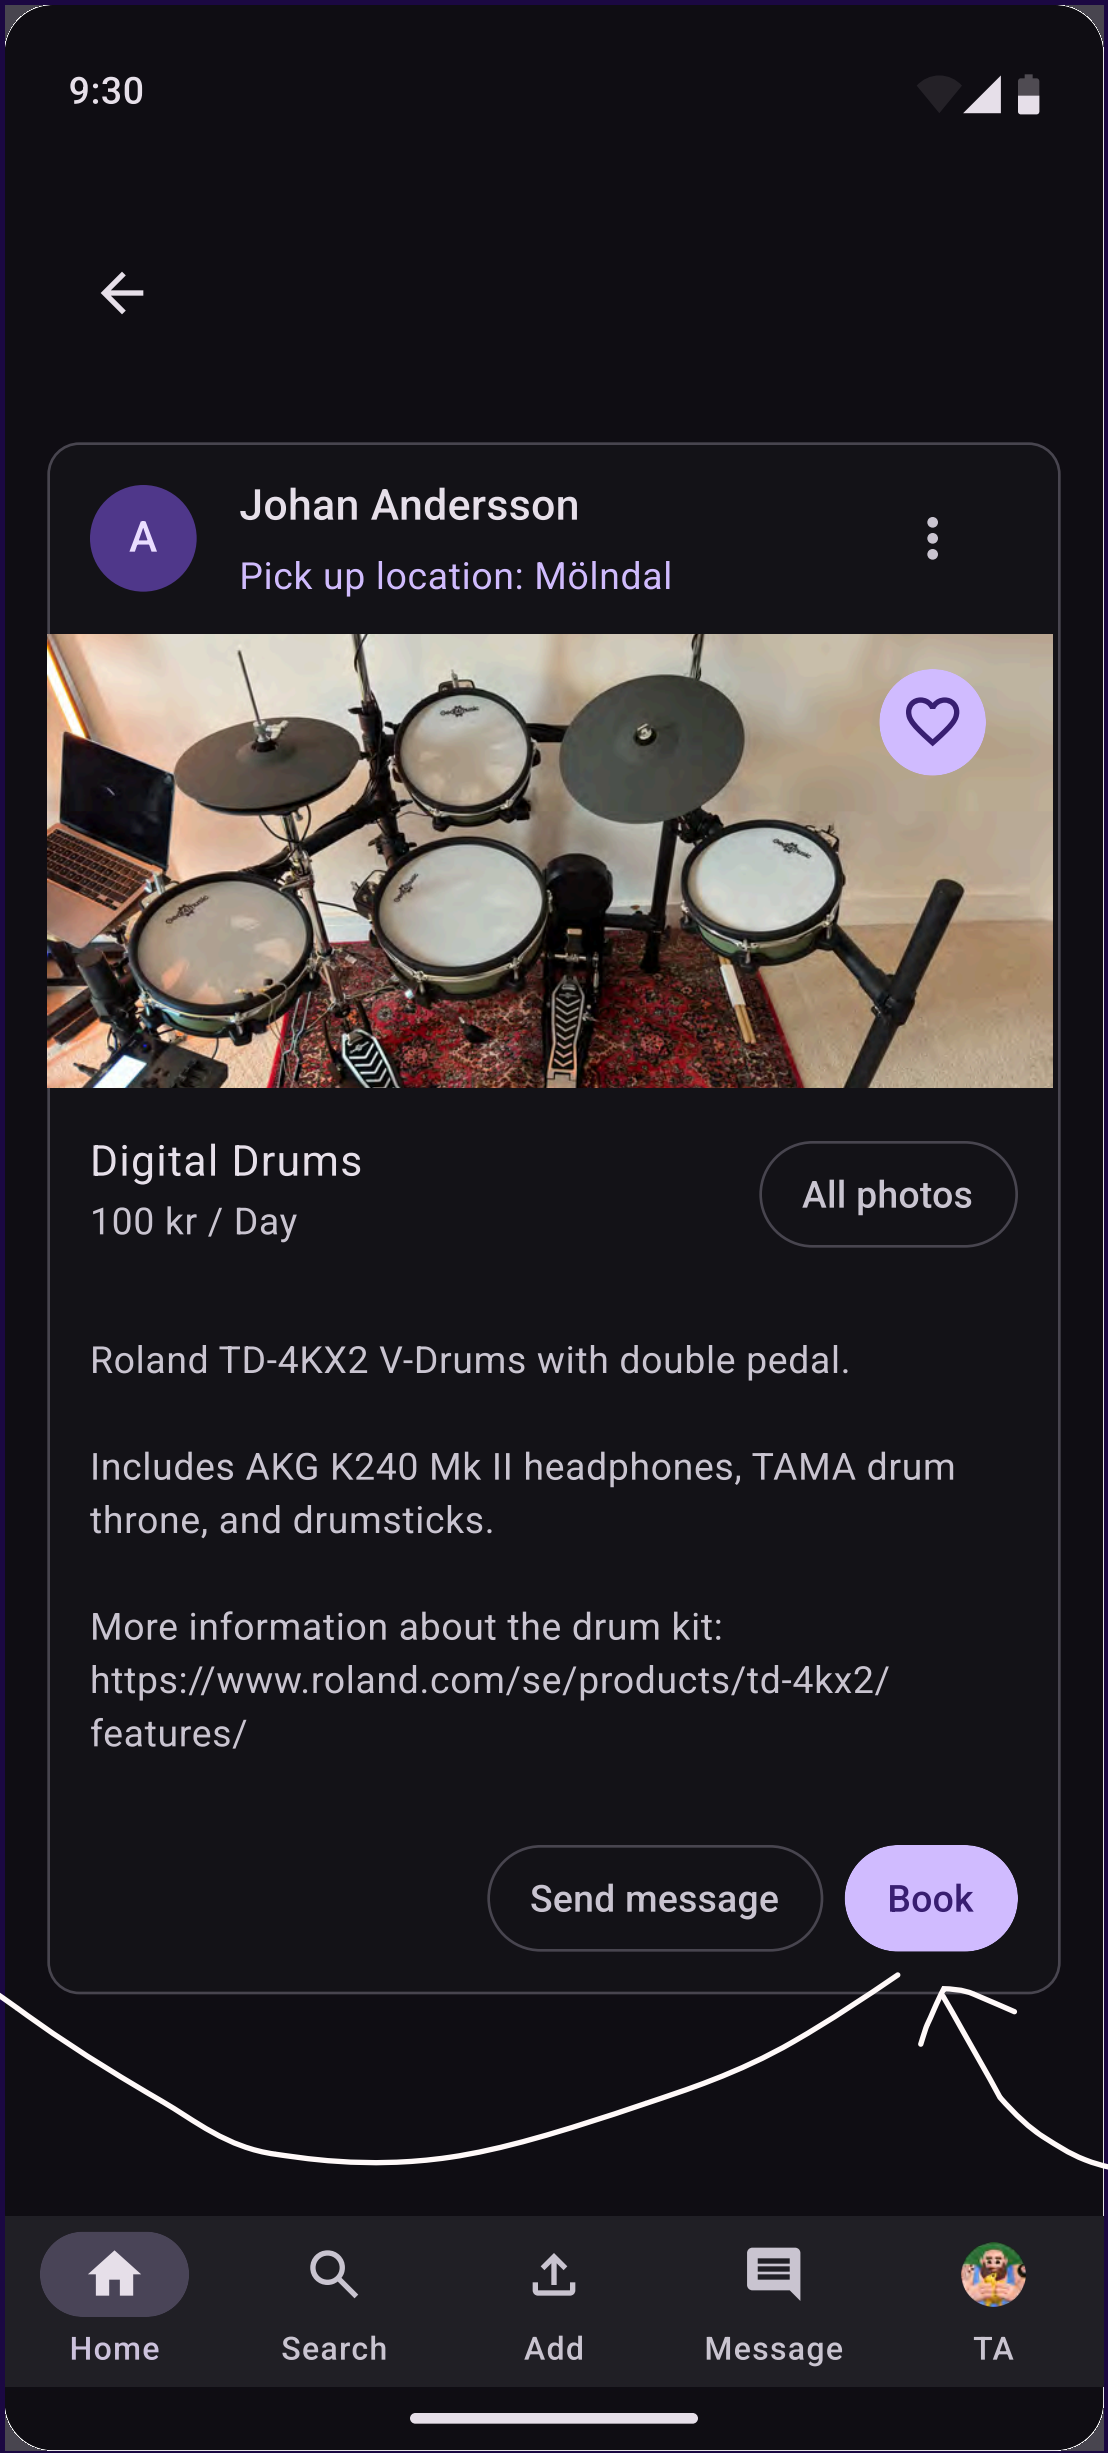

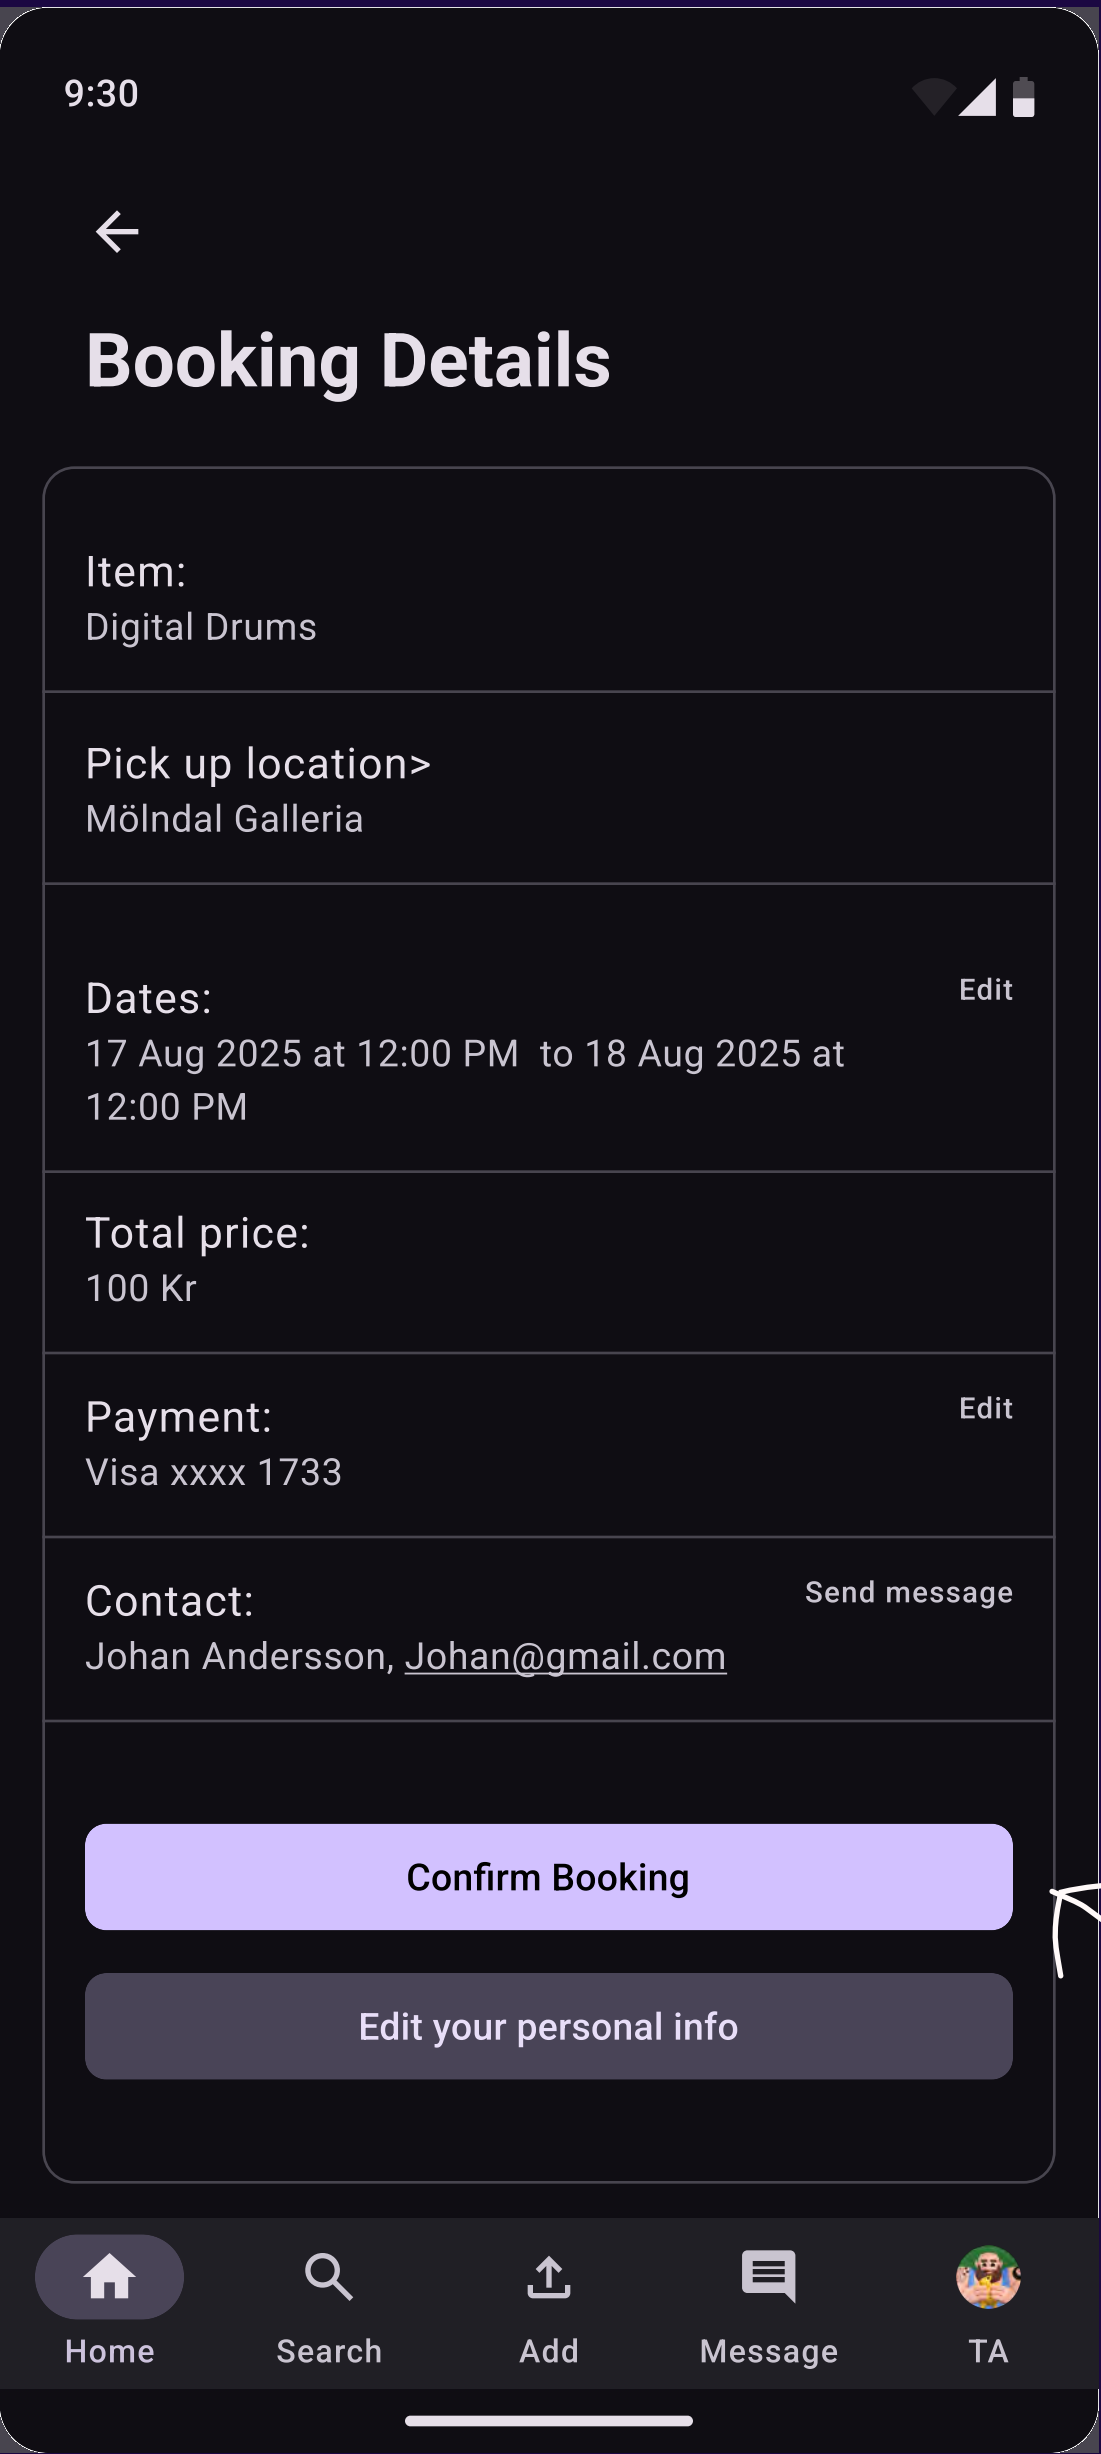

Purpose:

After selecting the preferred dates and clicking OK, the user is redirected back to the card page. The only change on this page is that the “See availability” button is replaced by a “Book” button. When the user clicks this button, the system navigates to the Booking Details page, where the user can review all input information, confirm the booking, or edit personal details.

Composition:

For the booking Details page, from top to bottom:

- App bar component in small configuration, it includes a back arrow icon on the left side to return to the previous page, a headline text that reads “Booking Details”.
- Outlined card inside it there are 6 List Items 0 with three line condition Density. first, second and forth does not have trailing support text and rest have. The trailing support text is edit button will allow user to edit specific data. The divider is showed in all these List Items.
- 16 dp space.
- A small button component in the primary colour.
- A small button component in the Secondary-container.
- The Navigation Bar component.

Confirm Booking and Editing Your Personal Info

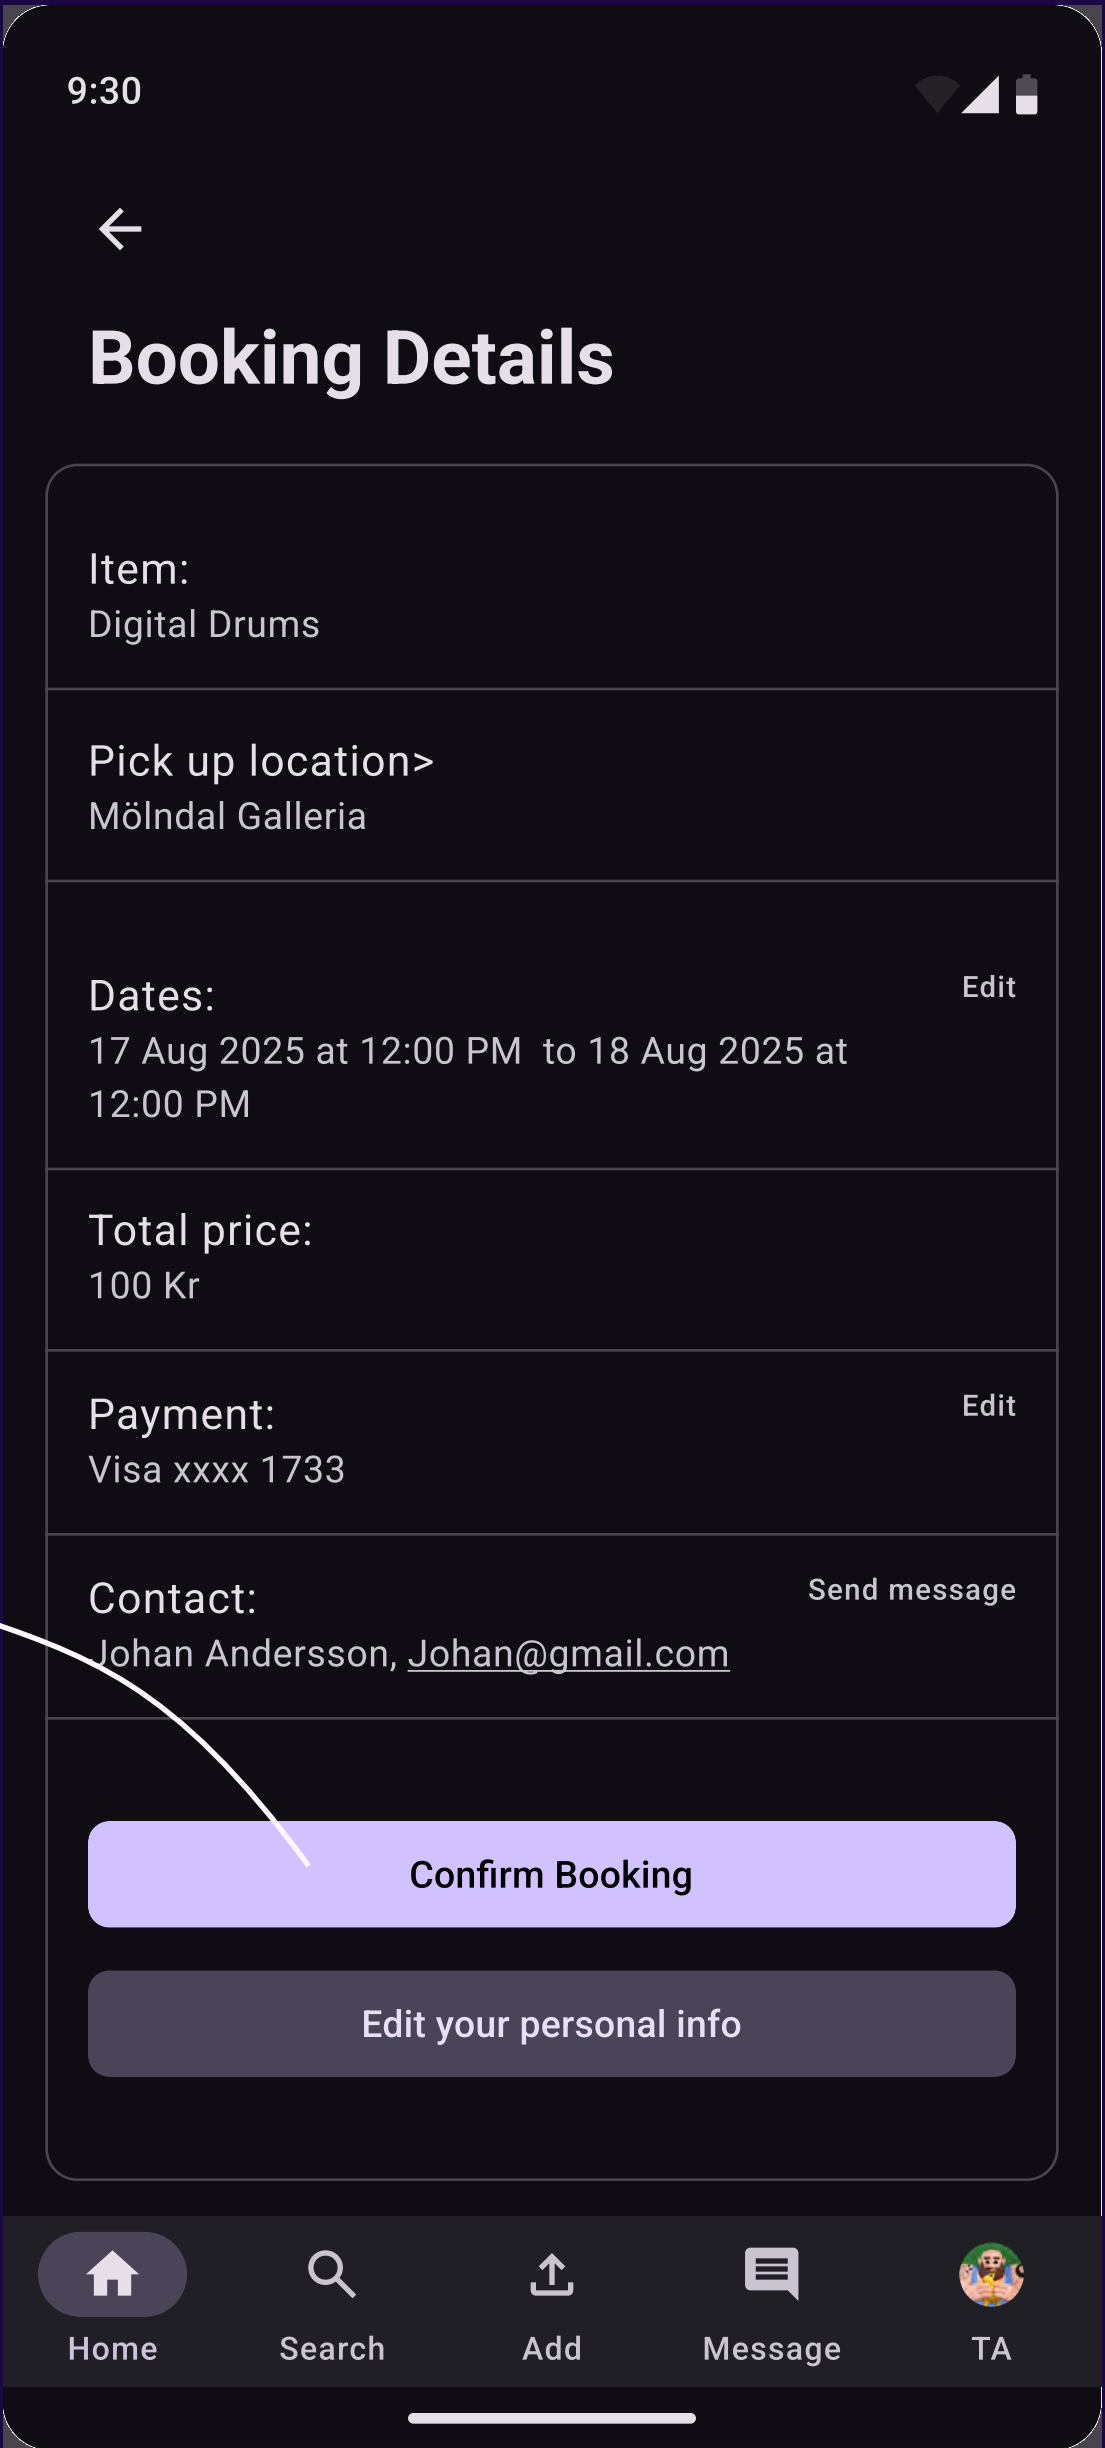

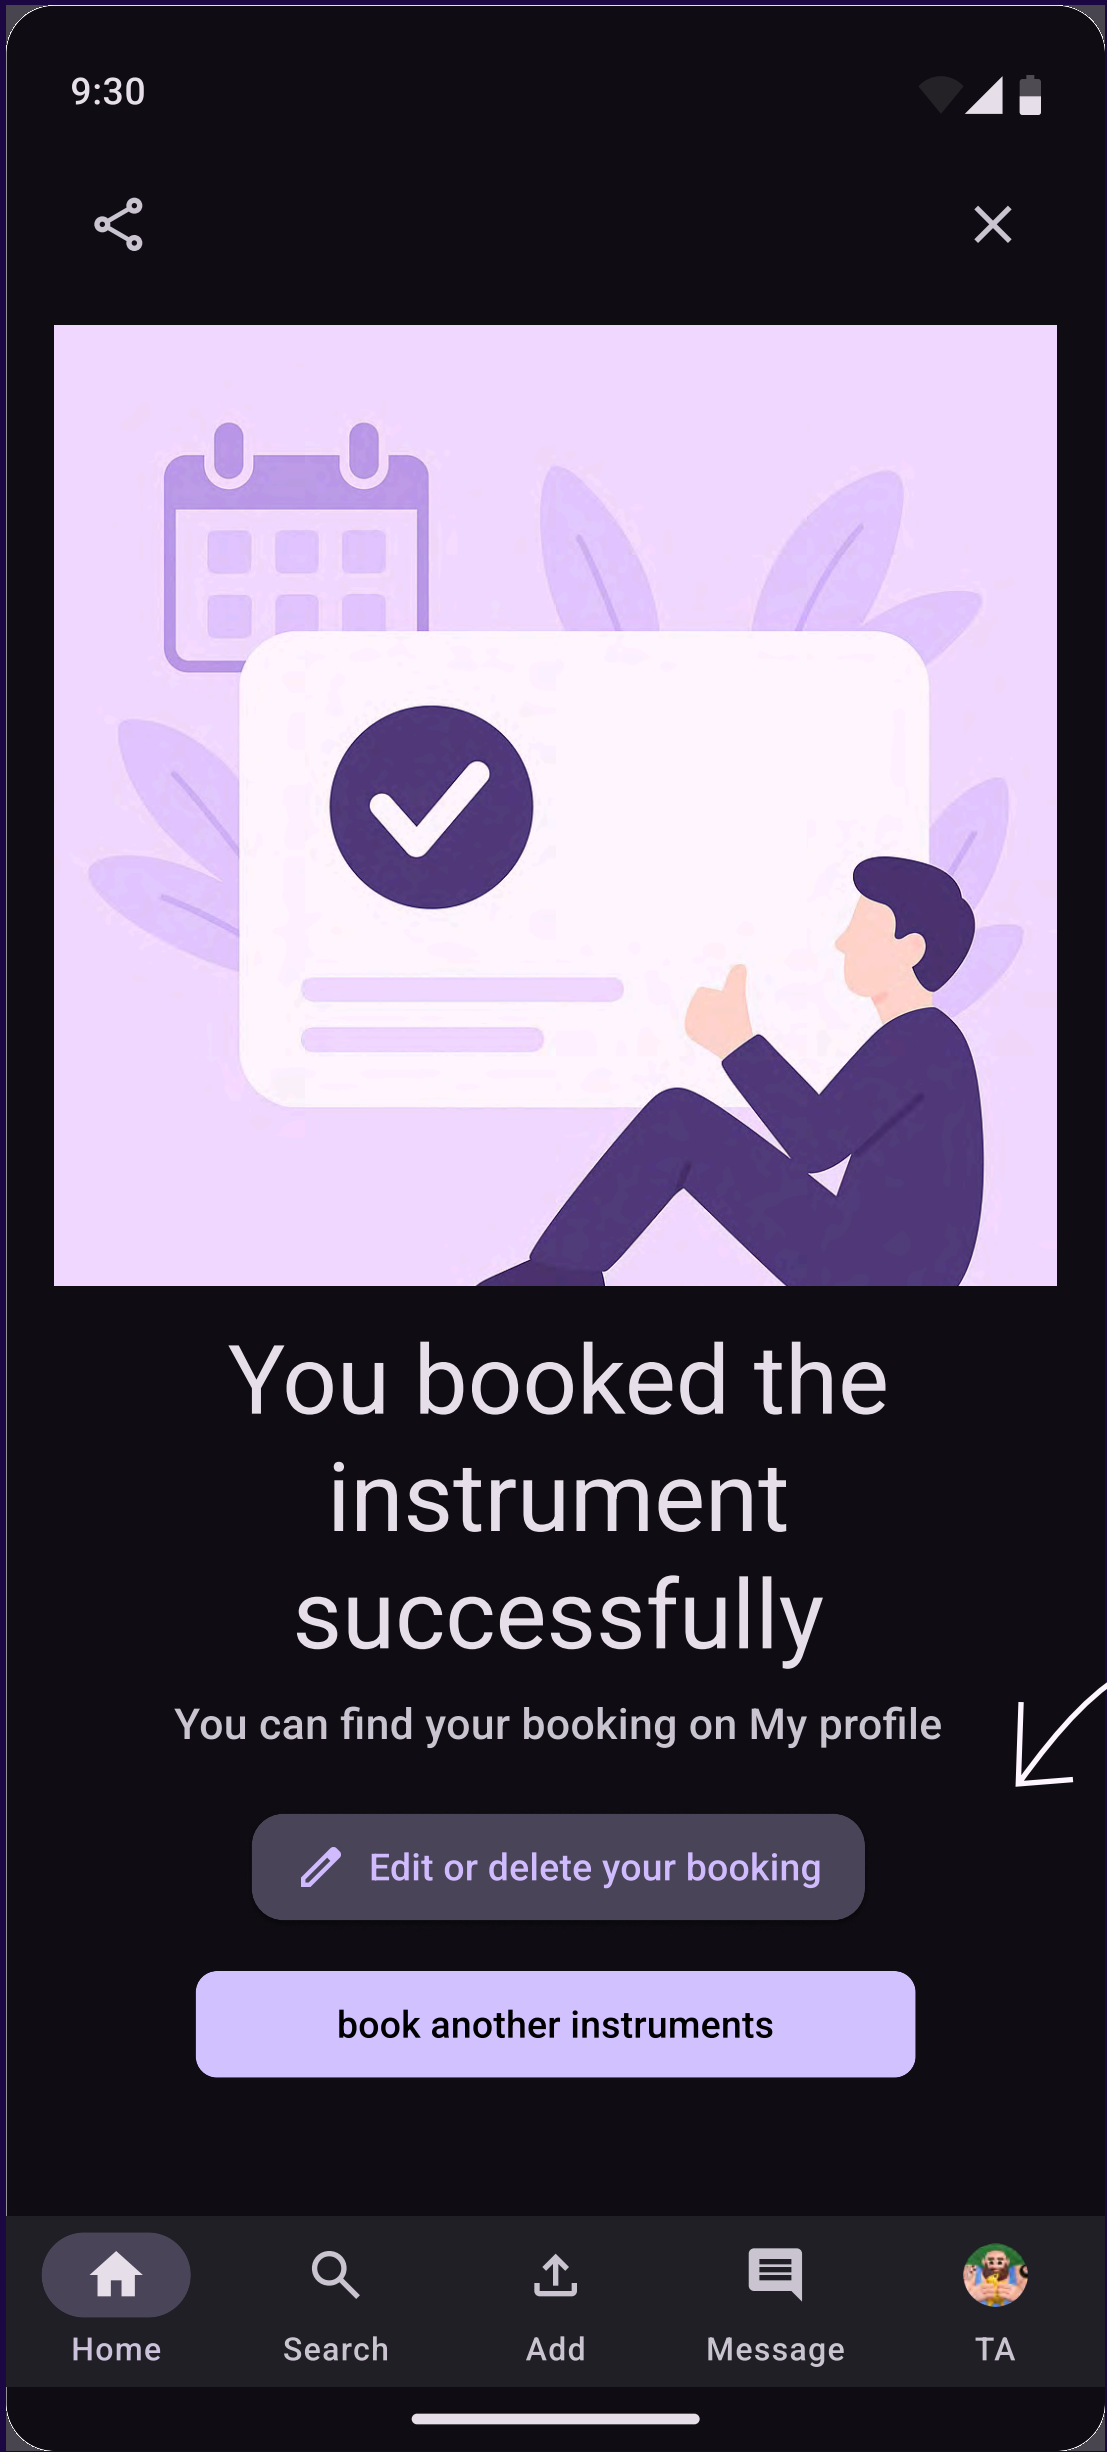

Purpose:

If user click the Confirm Booking button, will be navigated get feedback that say: “Tou booked the instrument successfully” and message bellow say You can find your booking on My profile” to help user finding the booking at any time. In addition user will receive an confirming email for the booking. There are two options, first edit or delete the booking and second, book another instrument. The design also allows the user to share the booking on different platforms.

Composition:

From top to bottom:

- On the left side 48x48 Icon button Togglable component and the icon is Share. In the same raw on the right side 48x48 Icon button Togglable component and the icon is Close.
- 14 dp space.
- Filled Card component for the picture and size is w376 and h360 dp.
- Text Large, the font is display large from M3, “on-surface” colour..
- Text Large Font, the font is title medium, “on-surface” colour.
- 16 dp space
- Toggle button - elevated, the filled color is surface-container and the font’s color is Primary.
- 16 dp space.
- Small button on primary filled color and font’s color is on-secondary container.
- Lastly the Navigation Bar component.

Editing Your Personal Info

Purpose:
When the user clicks Edit Your Personal Info, the system navigates to the Profile page within the personal account section, where all previously saved data is displayed. Here, the user can update their information.
After editing, the user can return to the Booking Details page to confirm the booking or click Cancel to discard the changes.

Composition:
For the Editing your Personal Info page has been used same components and structure that been used in Create account page, from top to bottom: A Text Large component is used for the page title. Below it, there are 13 Text Field components in the Outlined style and Enabled state. The first two fields are placed horizontally beside each other for the first and last name. Below them, five text fields are placed vertically. Then, two text fields are positioned horizontally for the post number and city. Next, a Text Small component is used as a section label, followed by one horizontal text field, two vertical text fields, and a final horizontal text field. Below that, there is one List Item (0 Density) with a switch on the right side. A small MD3 button in the primary colour for Update. Finally, a small MD3 button in Secondary-Container colour is placed at the bottom of the layout for Update. Finally,. All spacing and alignment follow the MD3 spacing and hierarchy rules. The full list of fields is accessible through vertical scrolling.

Search section

Purpose:

When the user clicks Search in the navigation bar, they are taken to the main instrument categories, where they can browse and sort items to find the desired advertisement.

The main instrument categories consist of Drums, Woodwinds, Brass, String Instruments, and Keyboards.

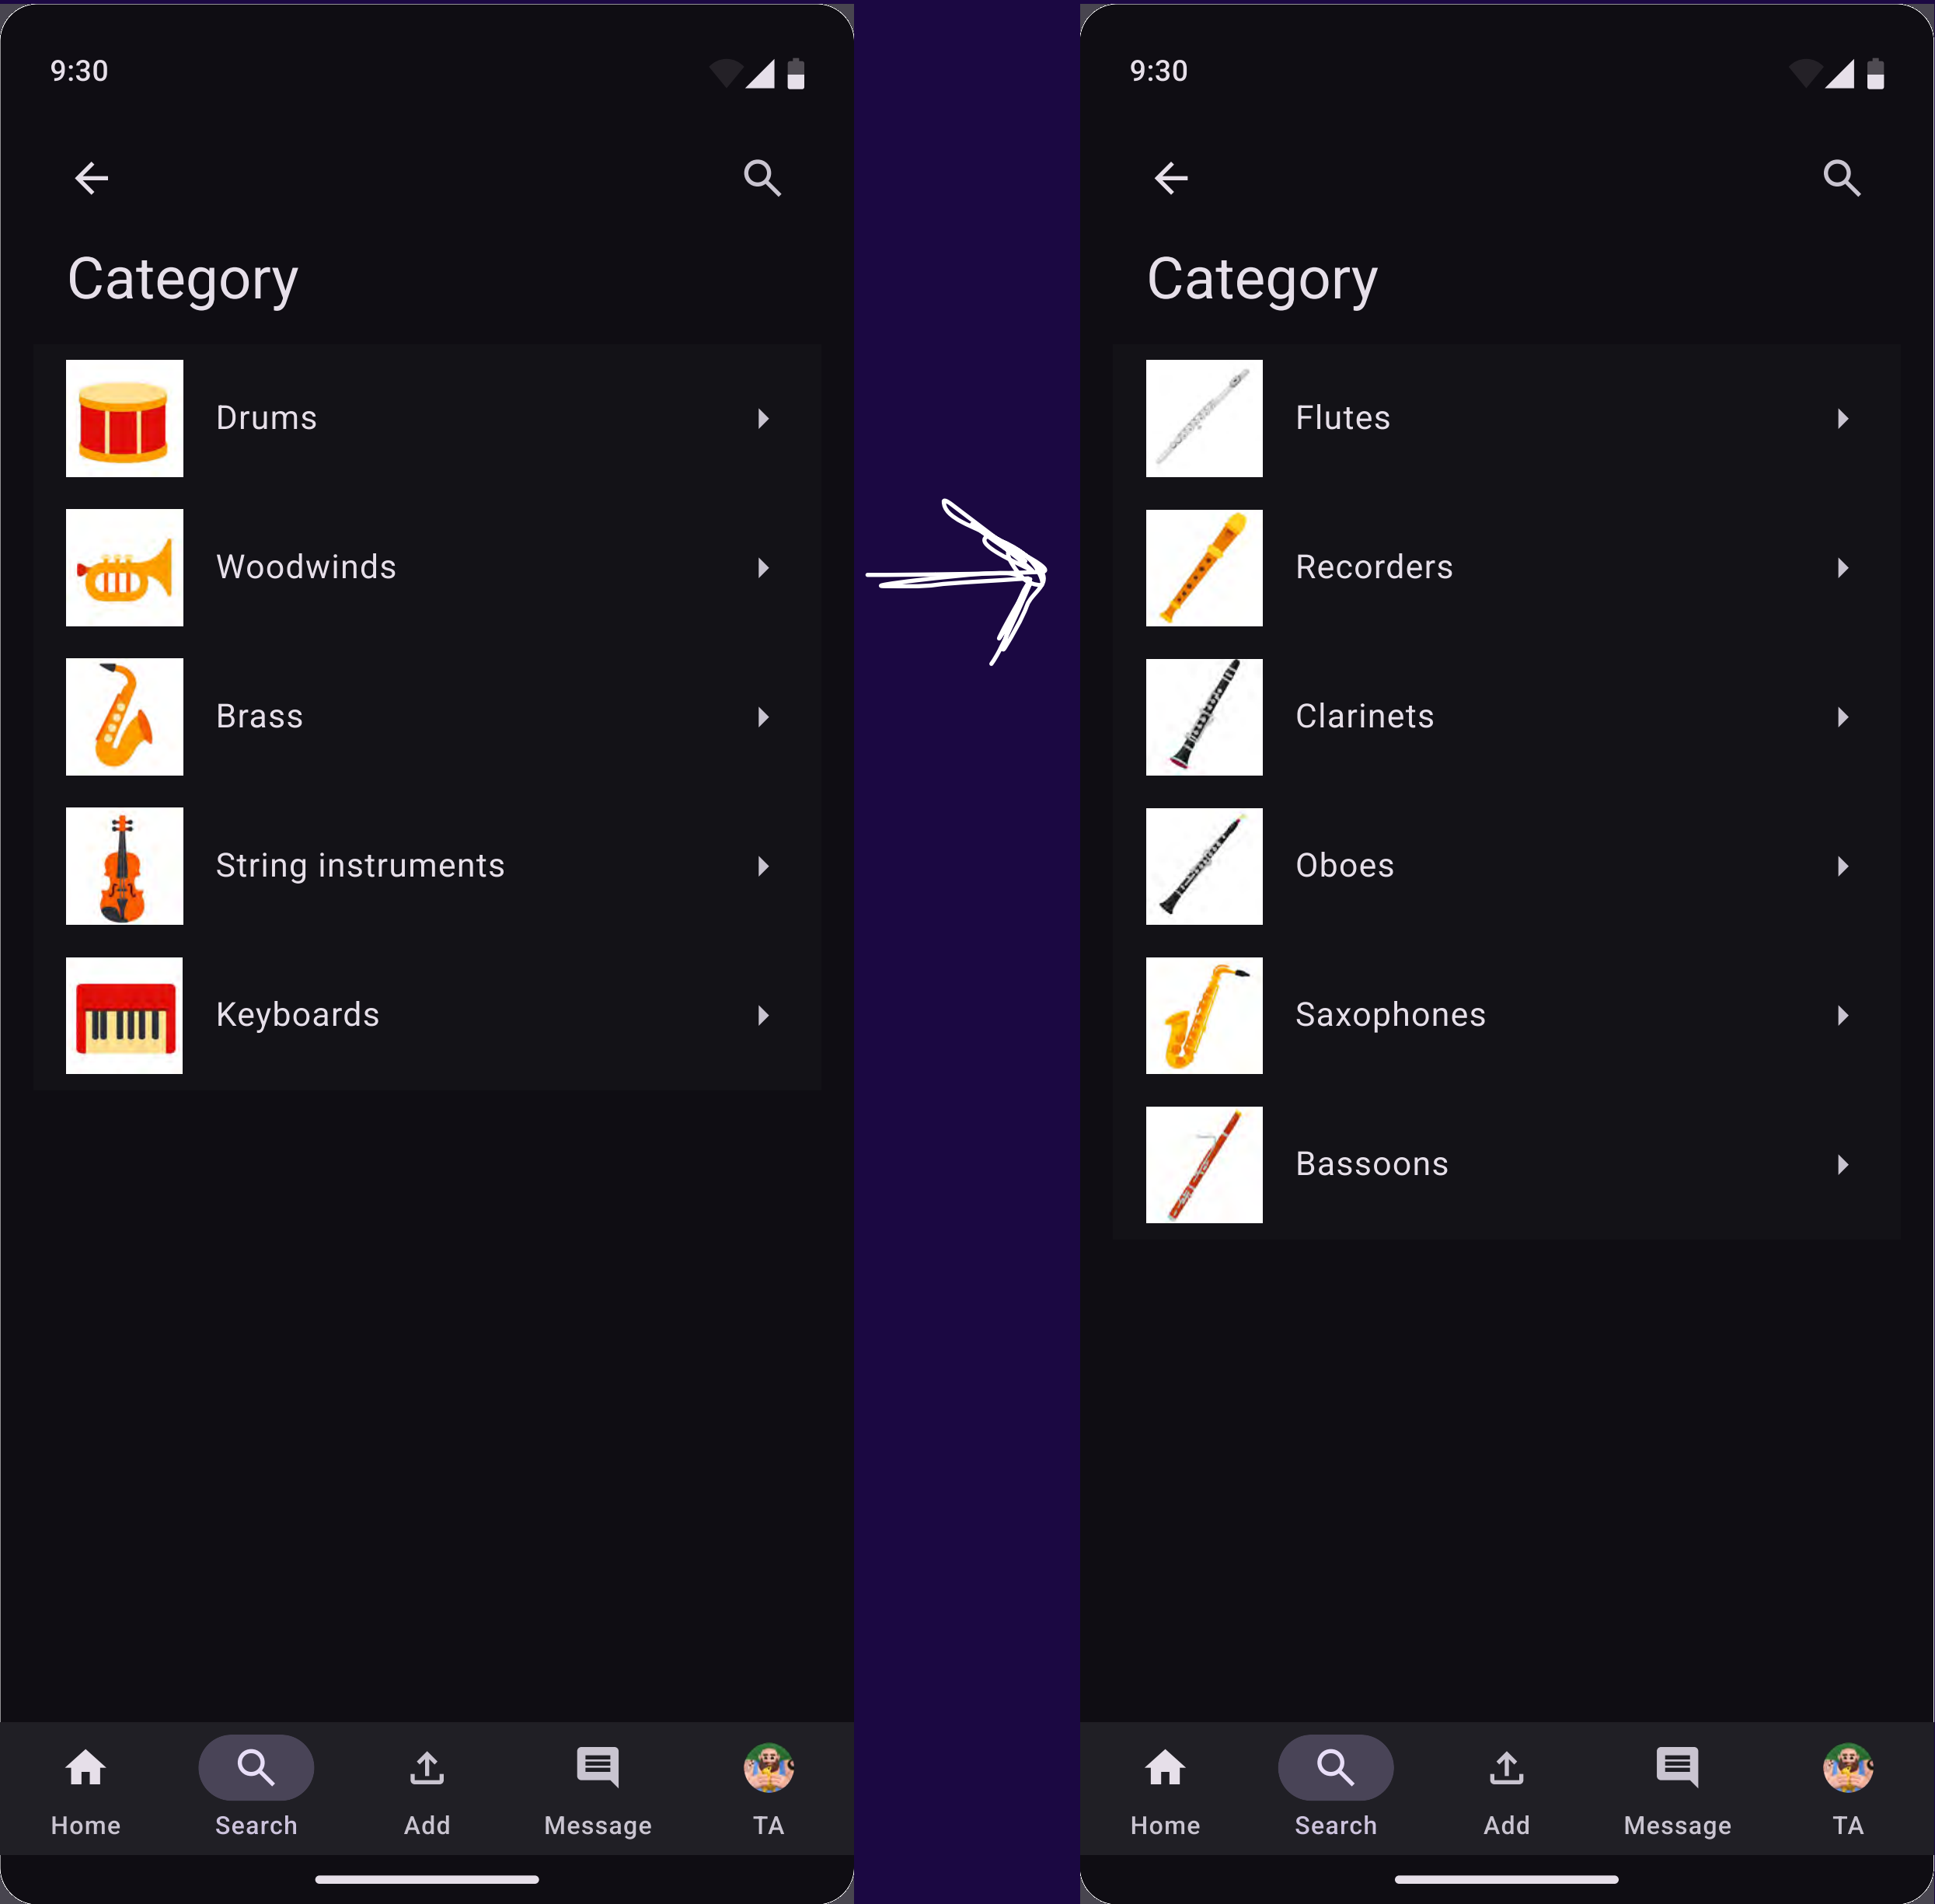

In the Woodwinds category, the following subcategories are included: Flutes, Recorders, Clarinets, Oboes, Saxophones, and Bassoons.

After selecting one of these categories, the system displays only the instrument ads that belong to the selected category.

Composition:

From top to bottom:

- App Bar component in Medium configuration, showing the first trailing action.
- Five List Item (0 Density) components arranged vertically. Each list item has:
 - Condition: 1 line
 - Leading: Image
 - Trailing: Icon (switched on to show image)
- The same composition applies to the subcategory view.
- Navigation Bar at the bottom, with the Search icon activated and selected.

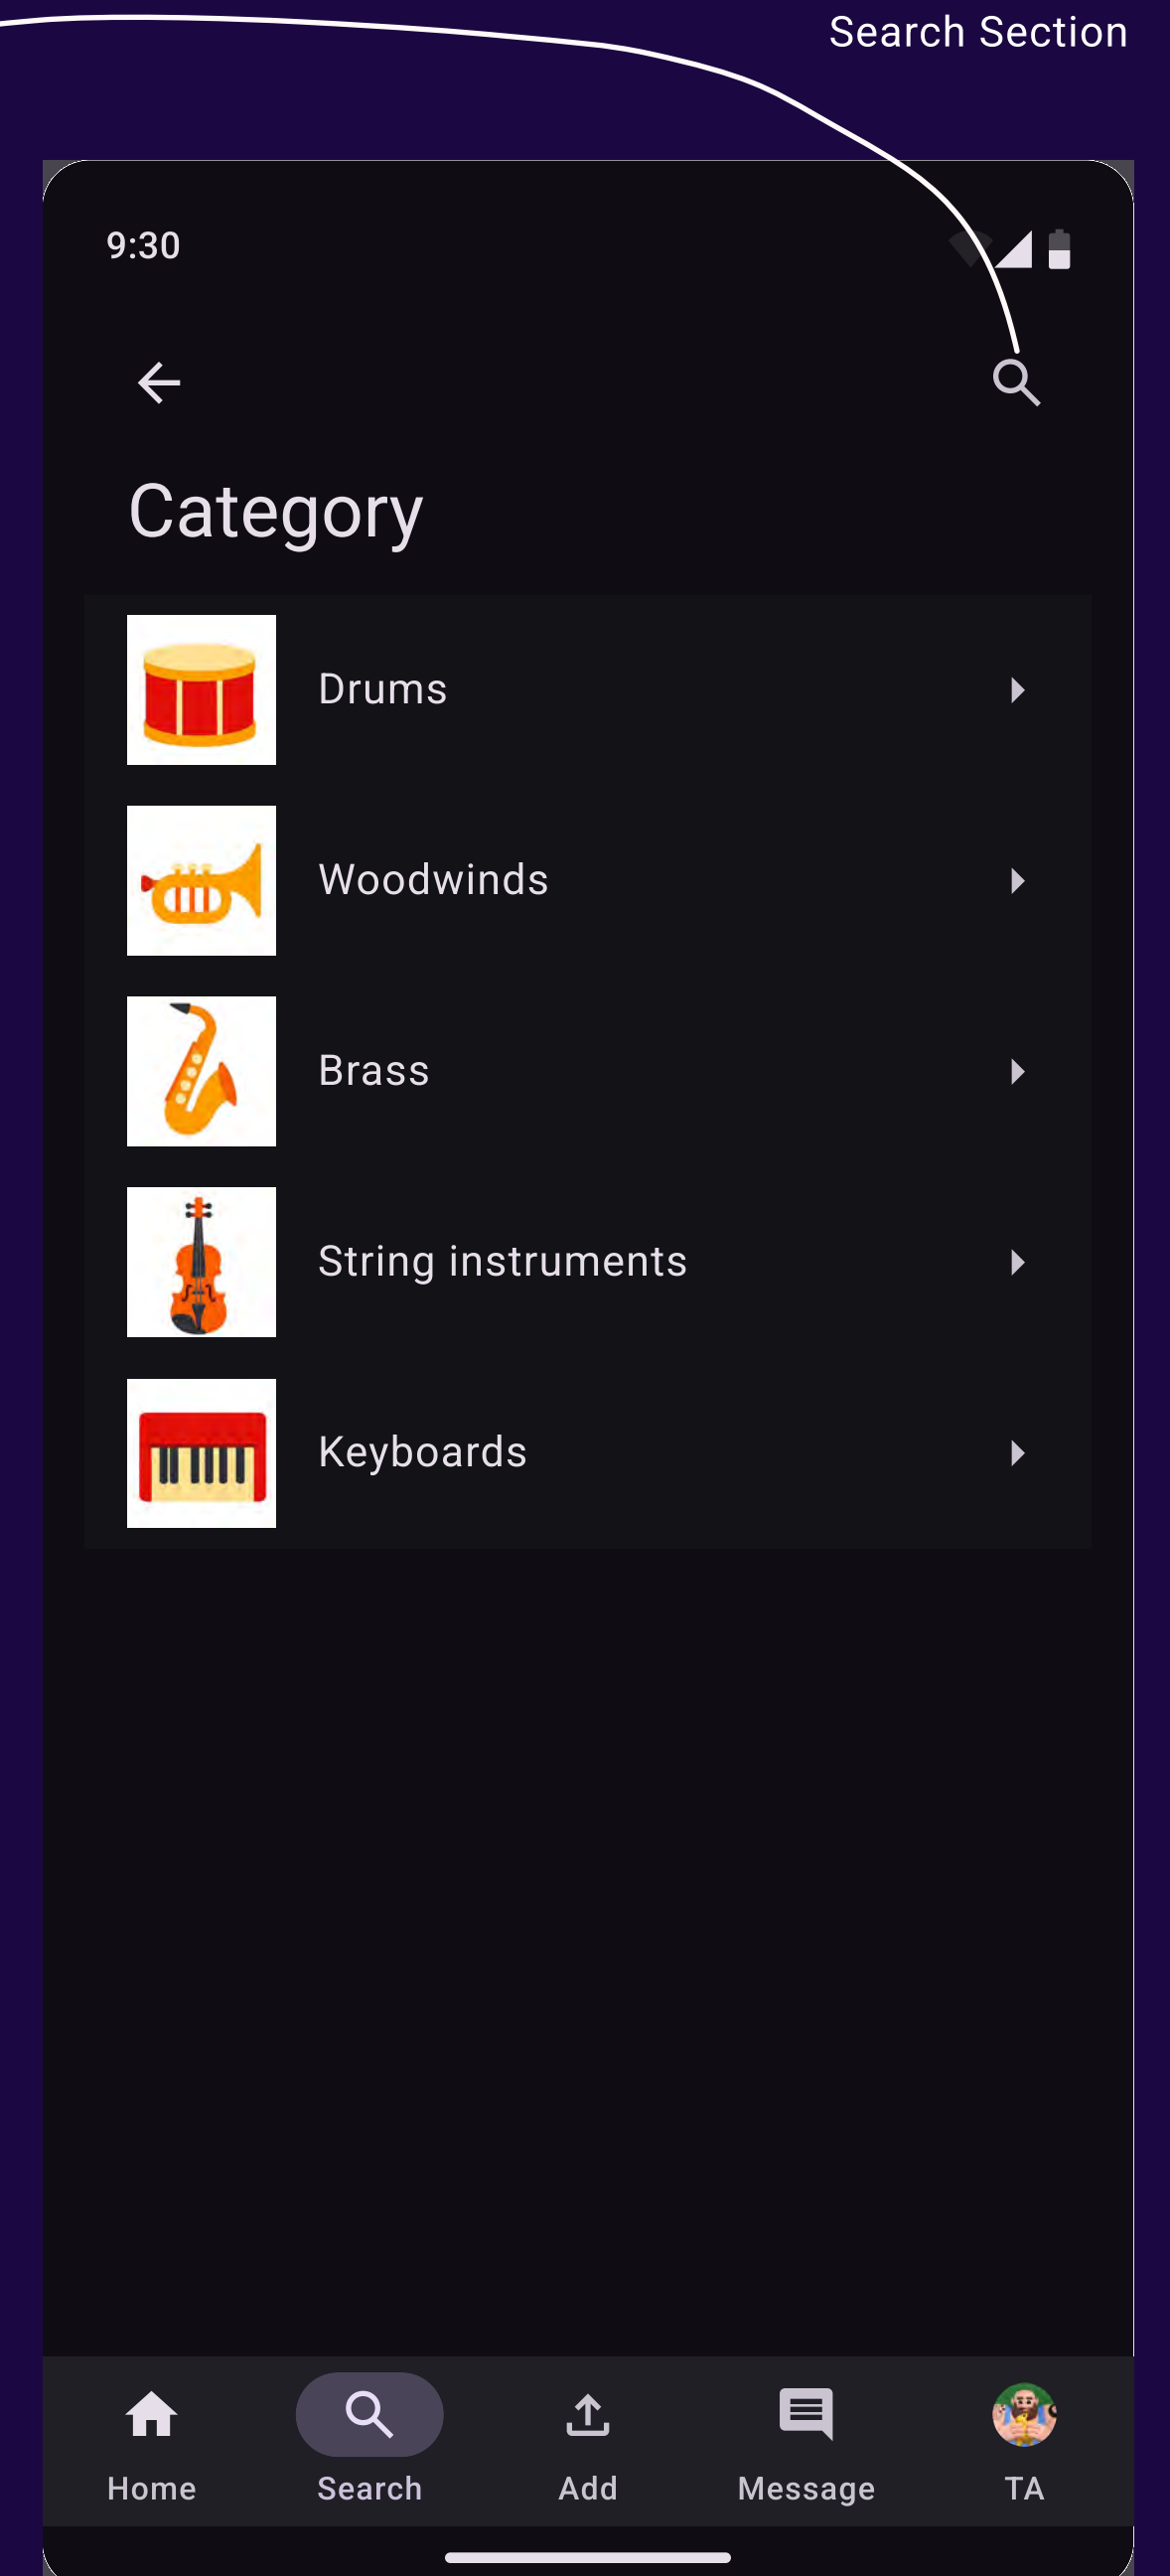

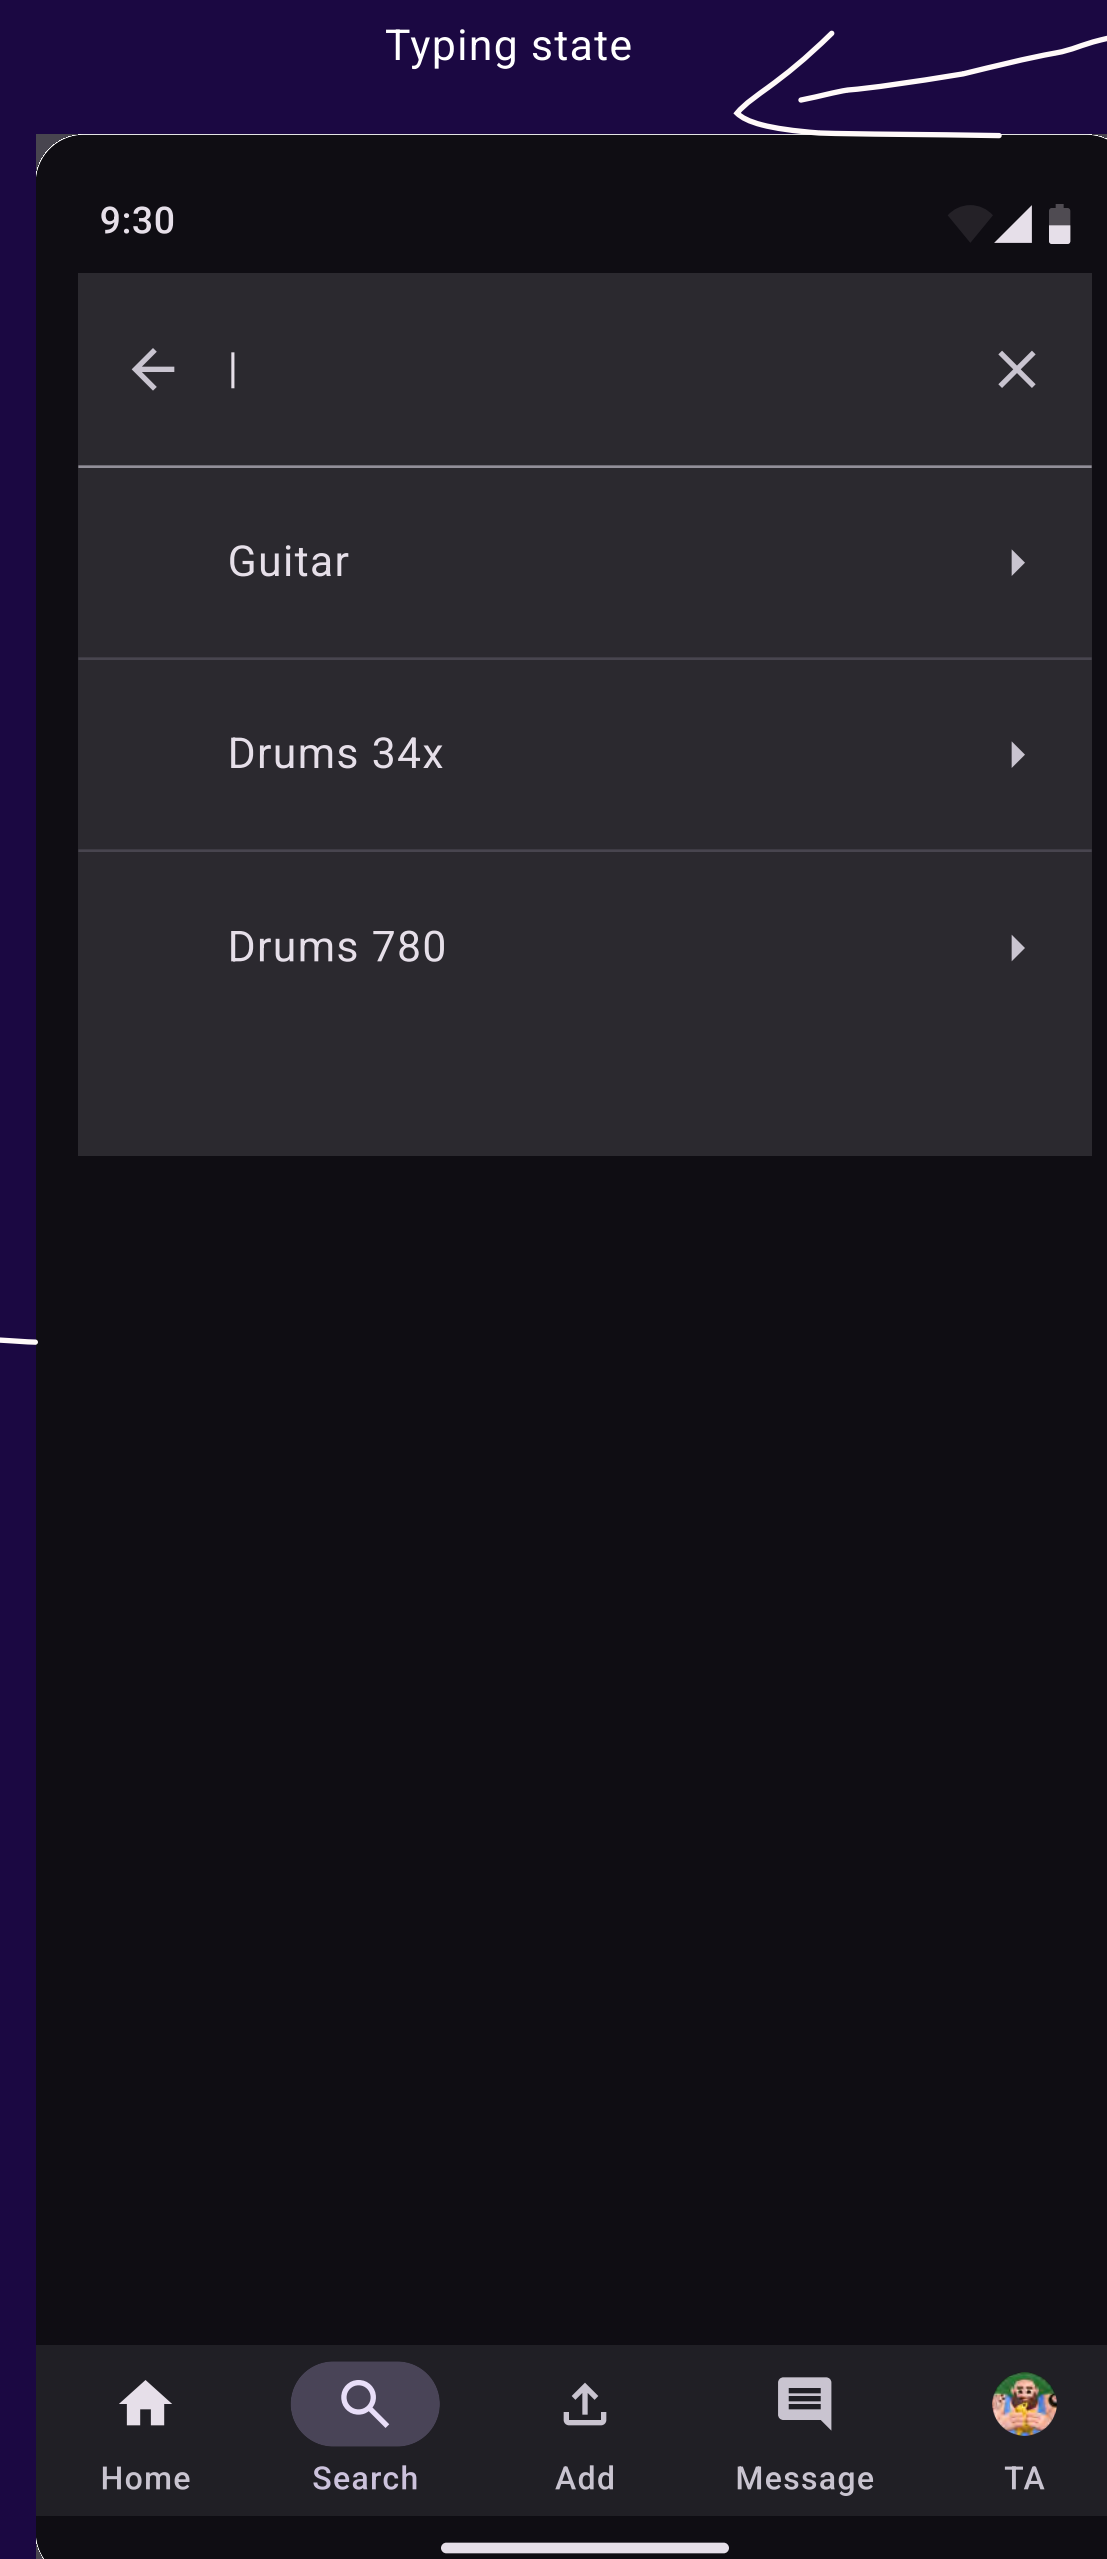

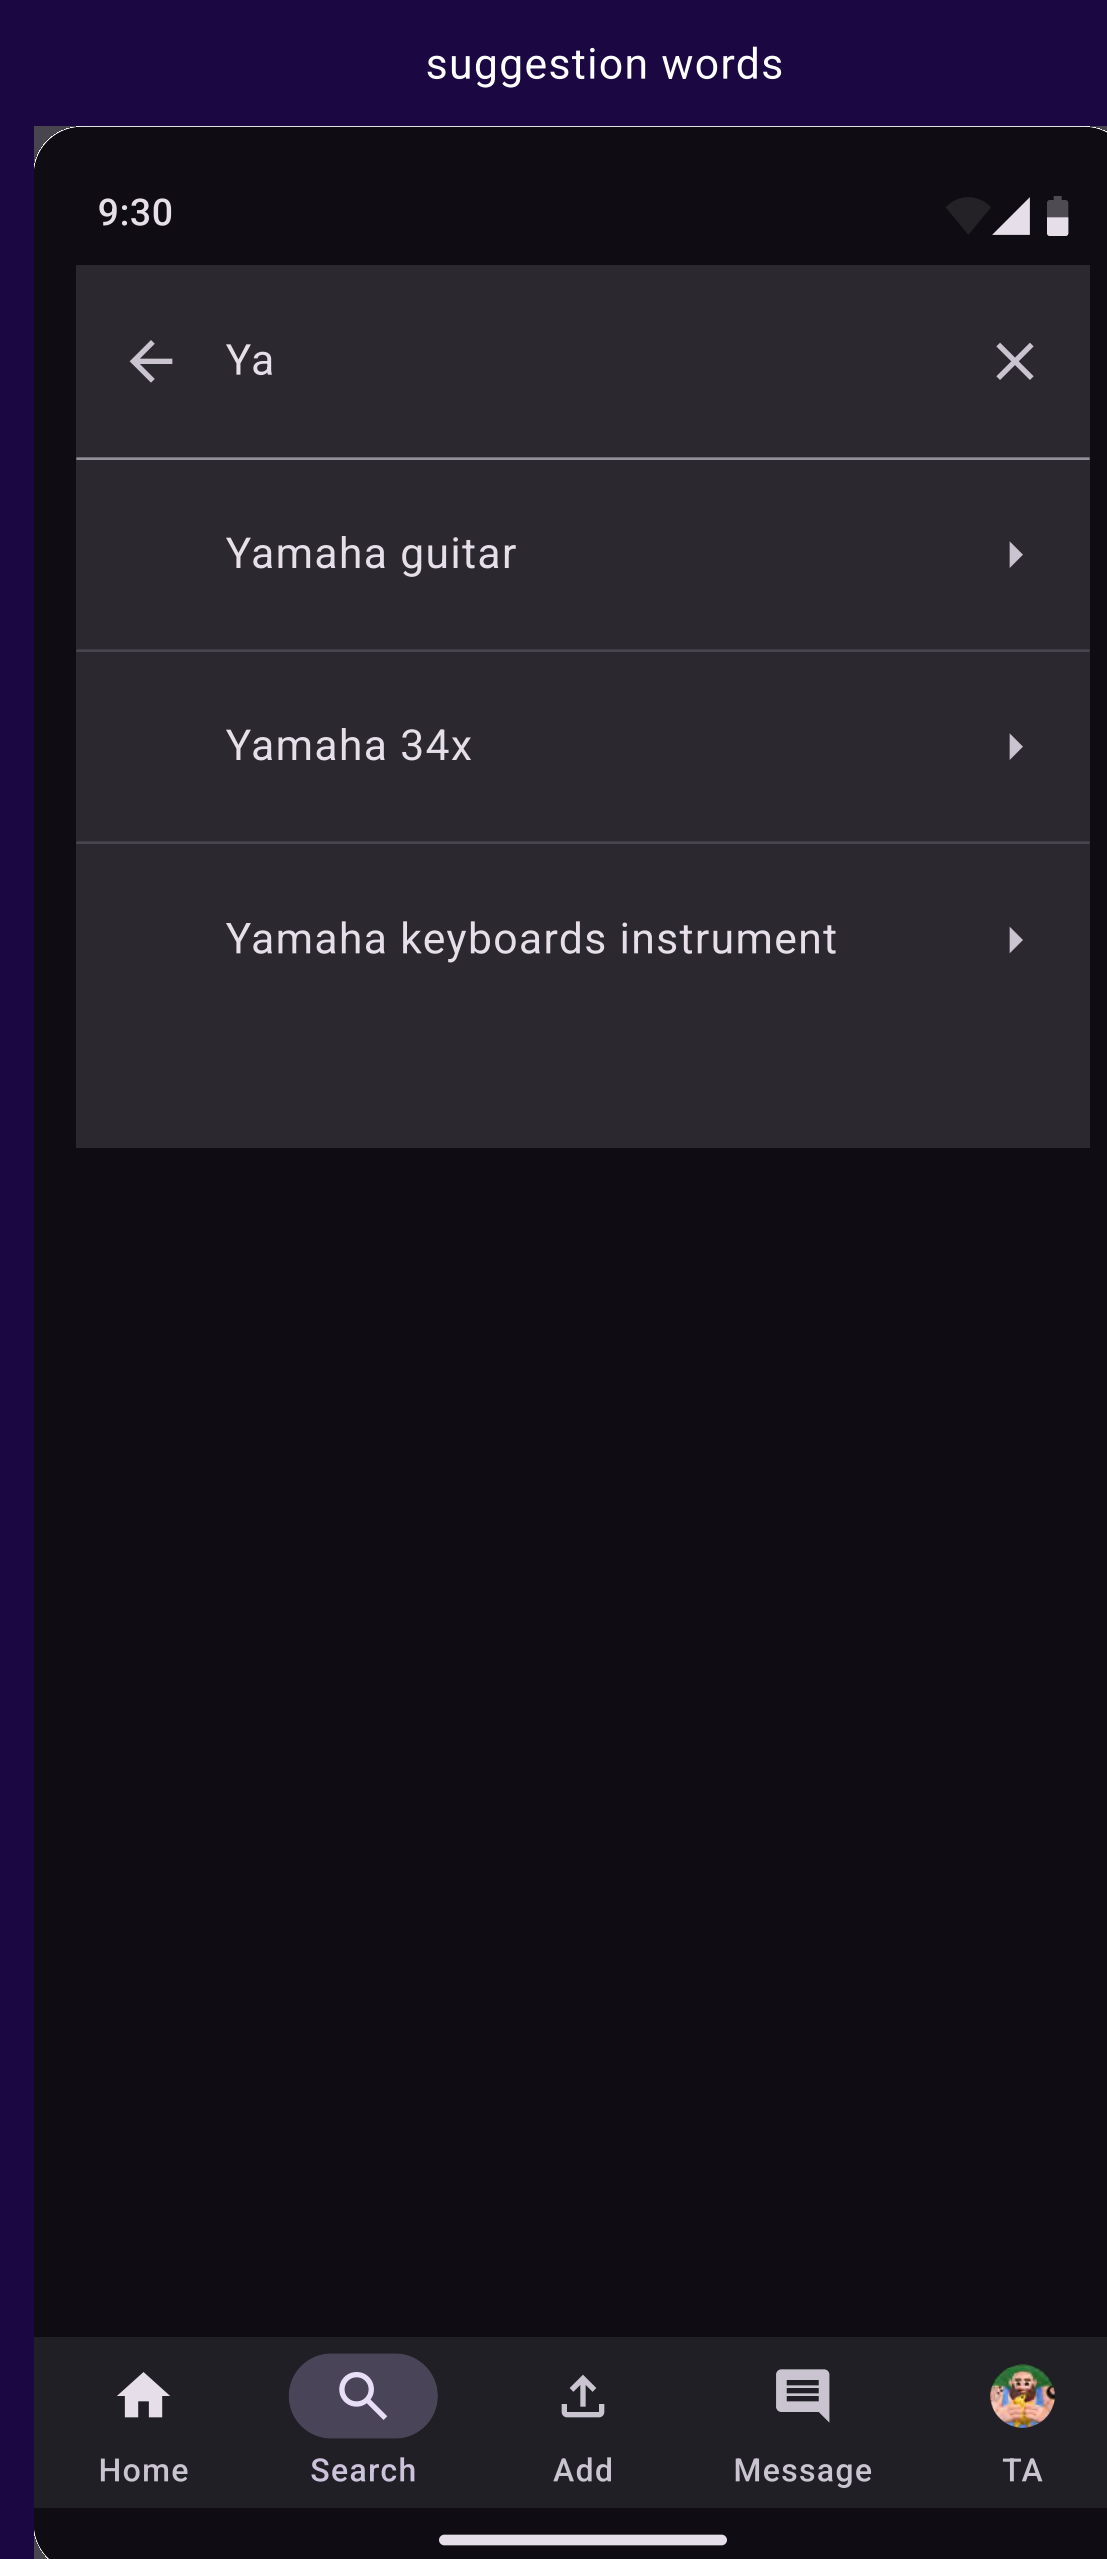

Typing state and suggestion words

Purpose:

When the user clicks the search bar, it switches to the typing state. As the user starts typing, the search bar suggests words that begin with the same capital letters. For example, if the user types "Ya," the system will suggest "Yamaha" in order to help users finding the correct names and spelling.

Composition:

It had used Search View Full Screen component. on the top right there is Close icon to delete the text and on the left side there is arrow icon to go back to the home page. Navigation Bar.

Dealing with the filter bar

Purpose:

After selecting any category from the list – for example, Drums – the system displays all advertisements that belong to the chosen category. A filter option is available for further selection.

The filter is presented in a vertically scrollable bar, with each property displayed as a button.

The filter buttons units are: All filters, Category, Price, Place, Date, Only available and Sort by. See figure 5.

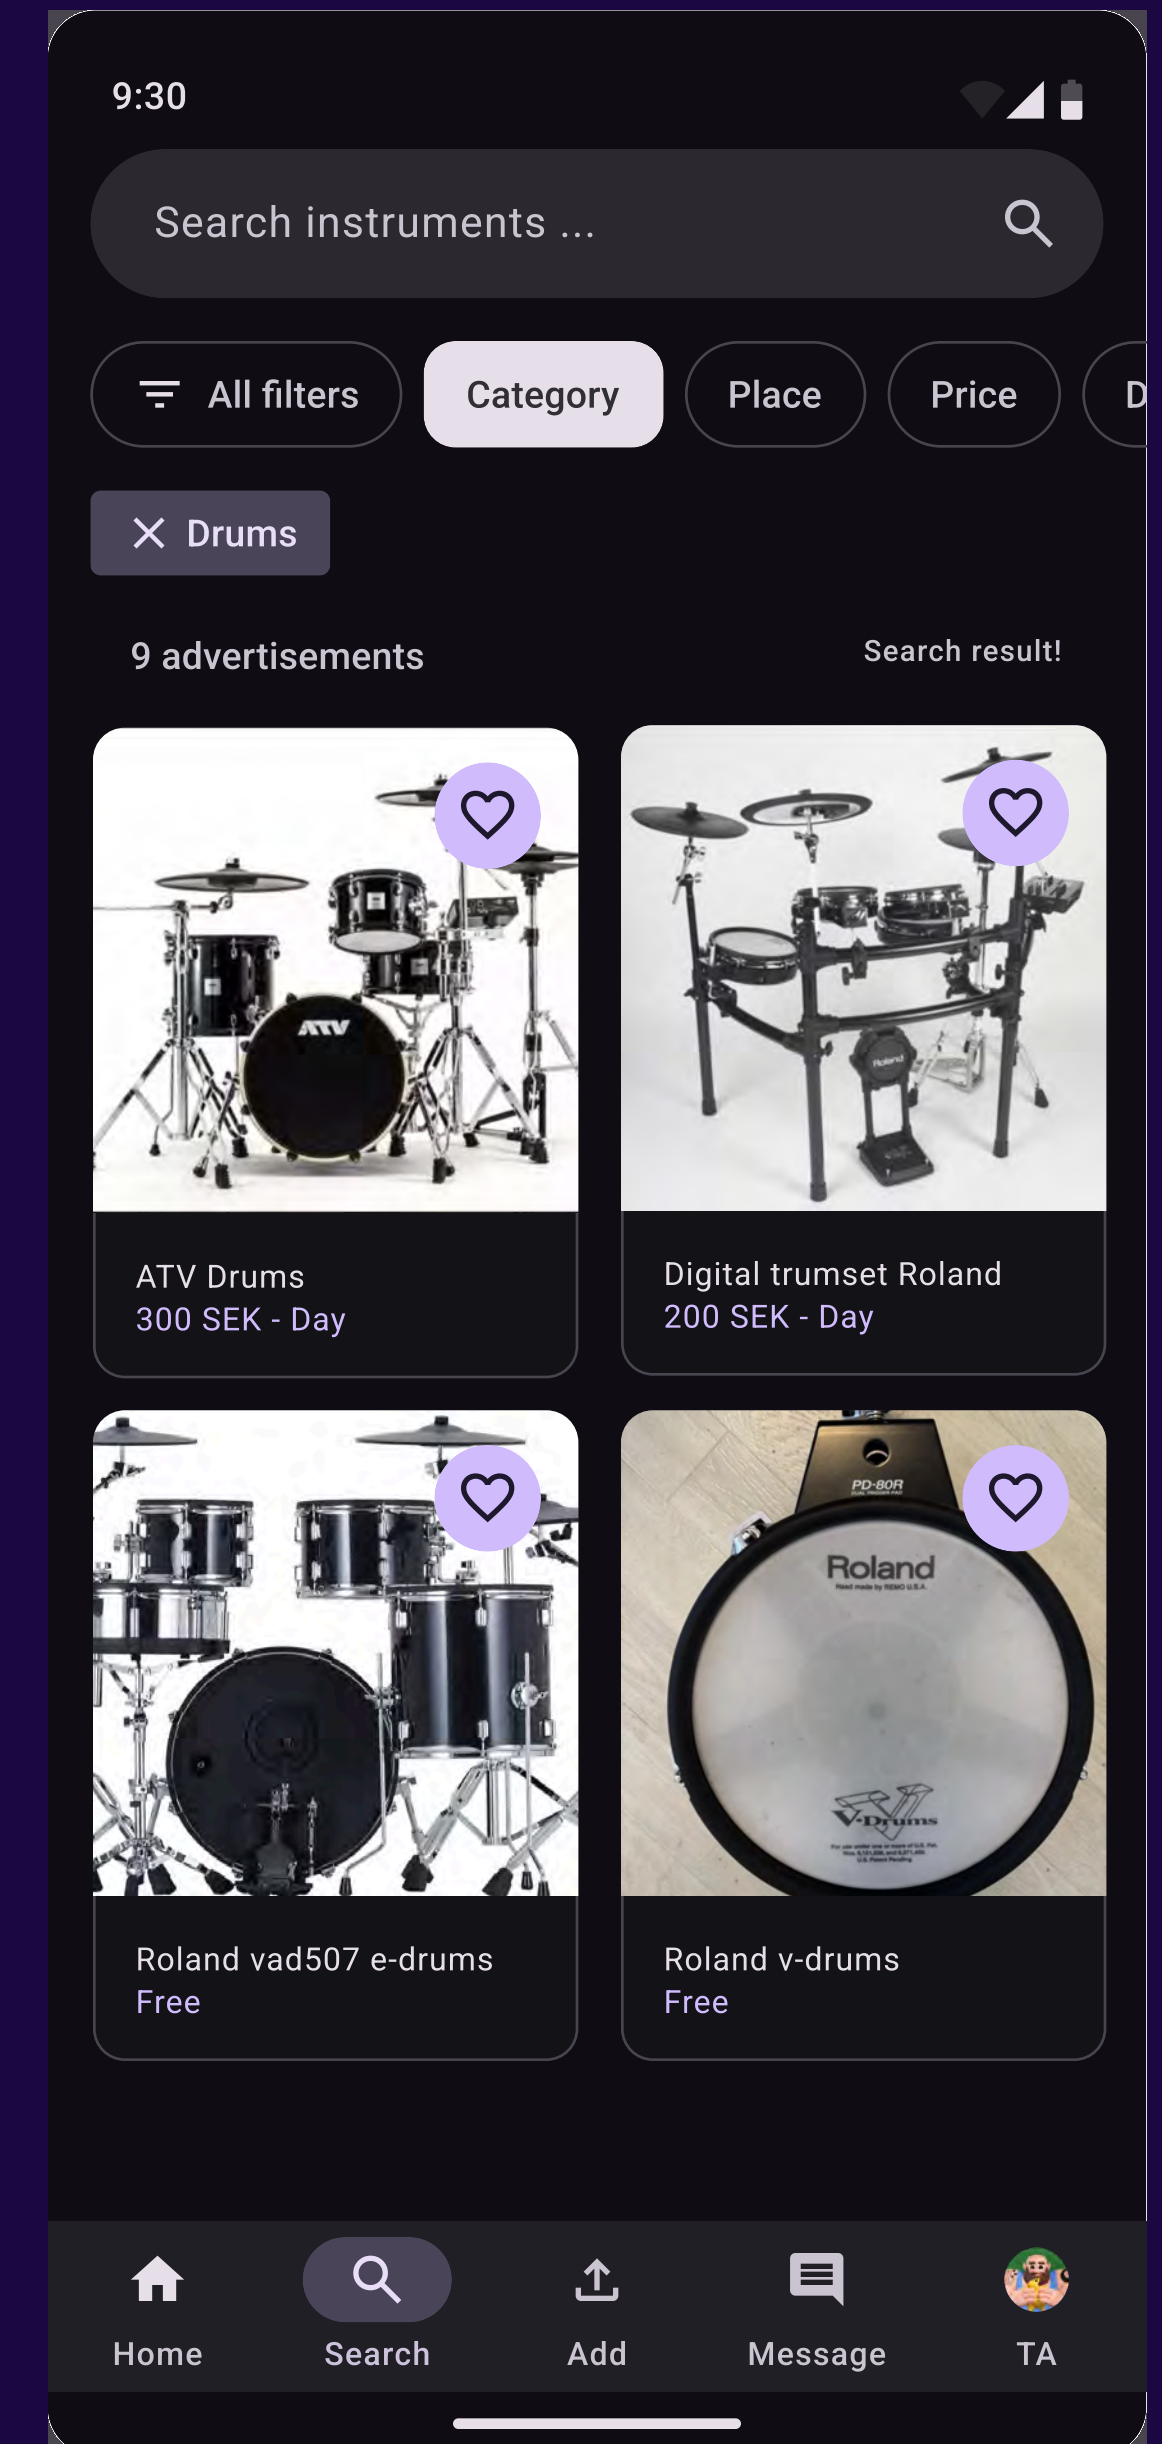

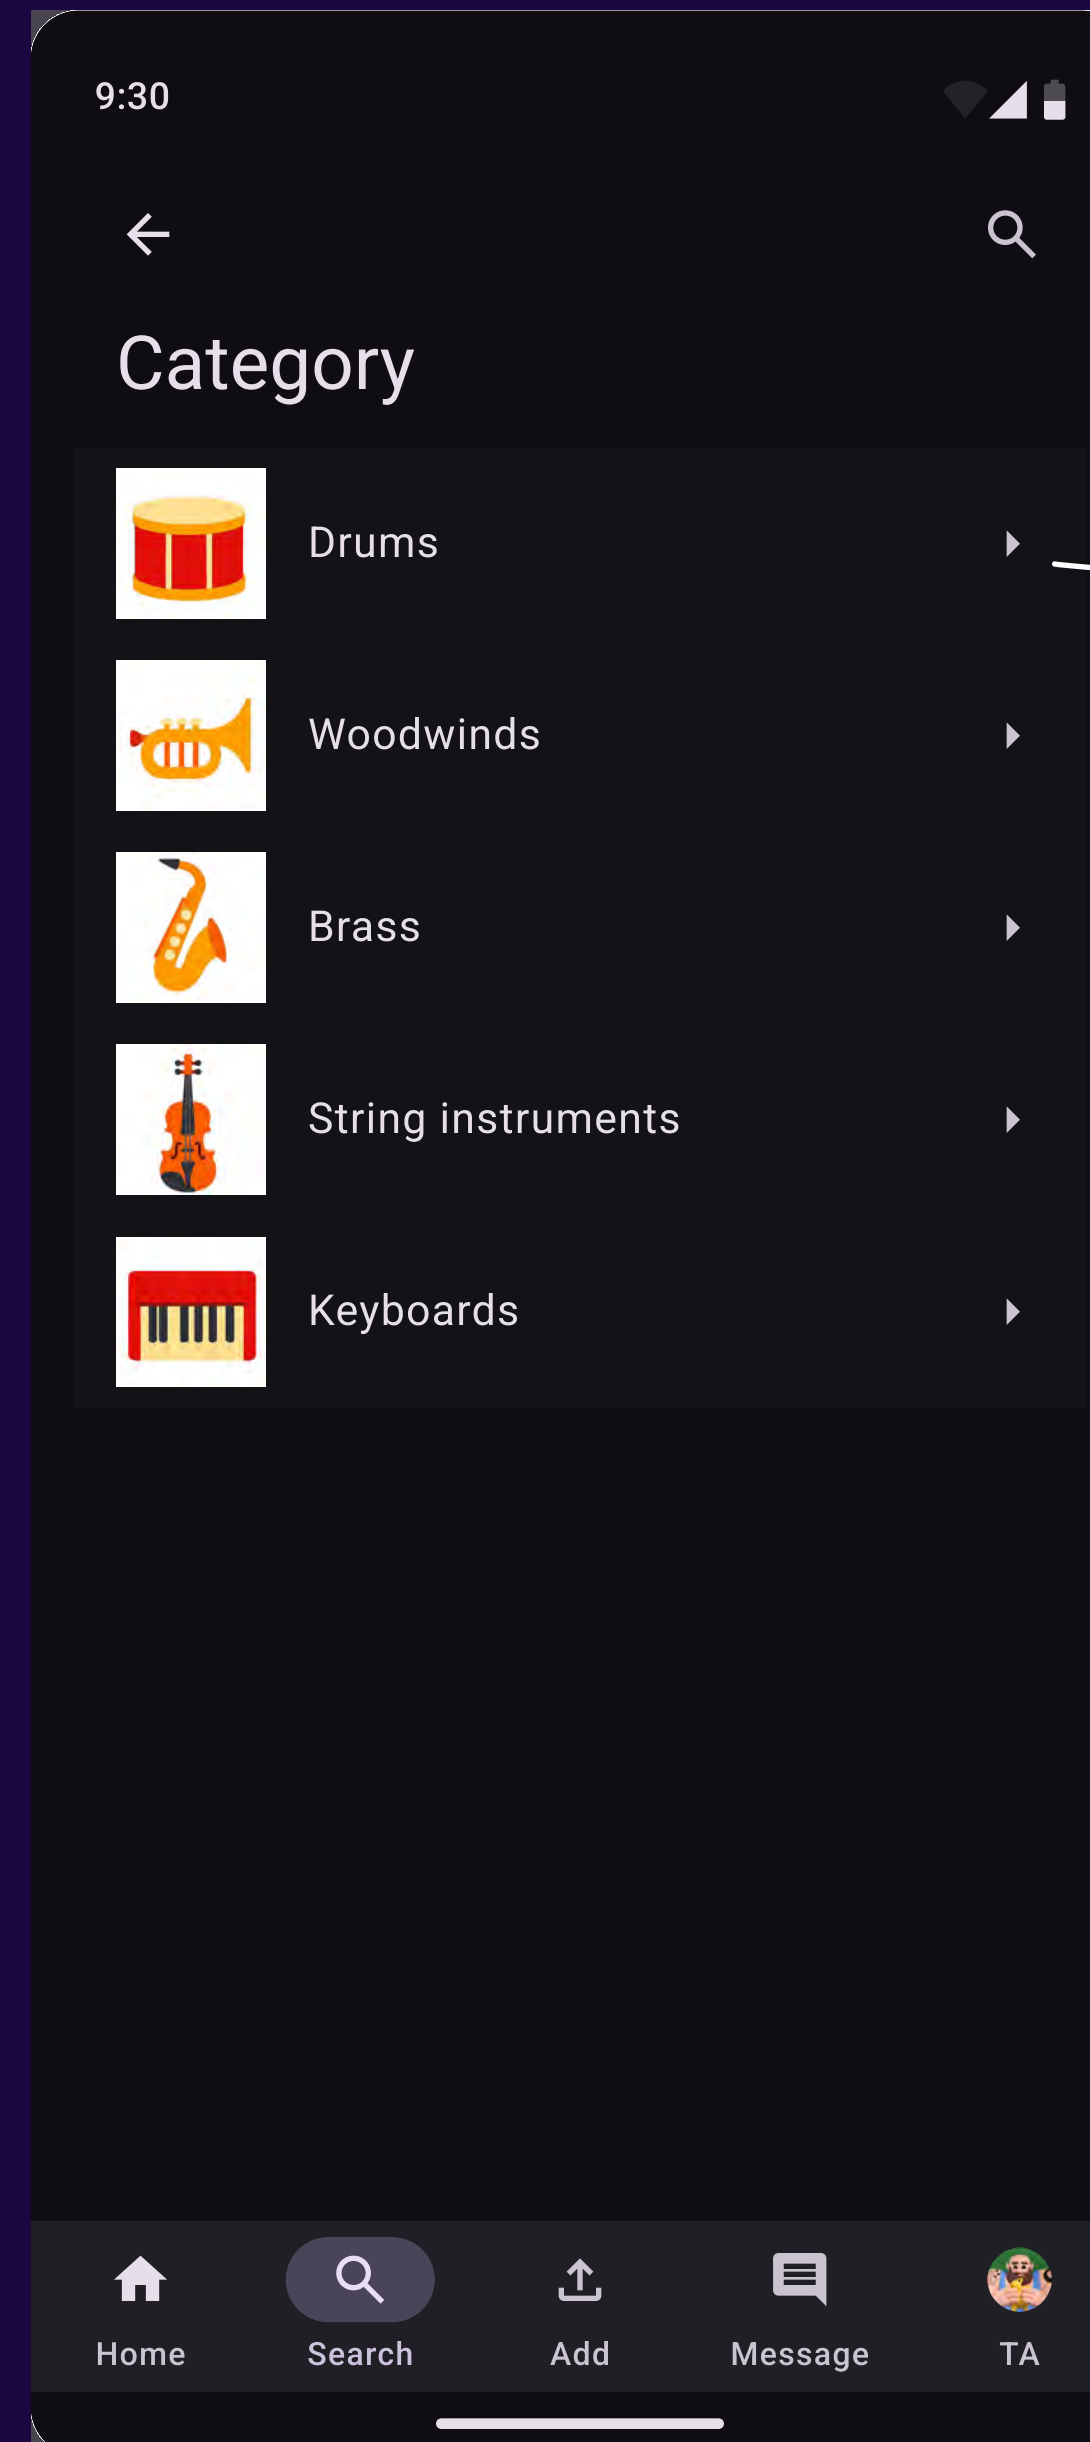

Additionally, there is a button for showing all filters, which will be explained later.

Composition:

From top to bottom:

- Search bar
- 12 dp space below
- Seven Toggle Button (Outlined) components placed horizontally with 8 dp spacing.
 - The second button on the left has a square shape, while the others are round.
 - The first button displays an icon, while the others do not.
 - Horizontal scrolling is enabled to select the desired option.
- 12 dp space below
- X-Small Button, unselected, showing an icon.
- Two Horizontal Navigation Items – one aligned to the right, the other to the left.
- Custom Stacked Cards components, arranged two per horizontal row.
- Navigation bar at the bottom.

Figure 5

Place from filter bar

Purpose:

The user can filter ads by city using the Place option in the filter menu. By selecting a specific city where they want to pick up the instrument, the system will display only the instruments available in that selected city.

Composition:

From top to bottom:

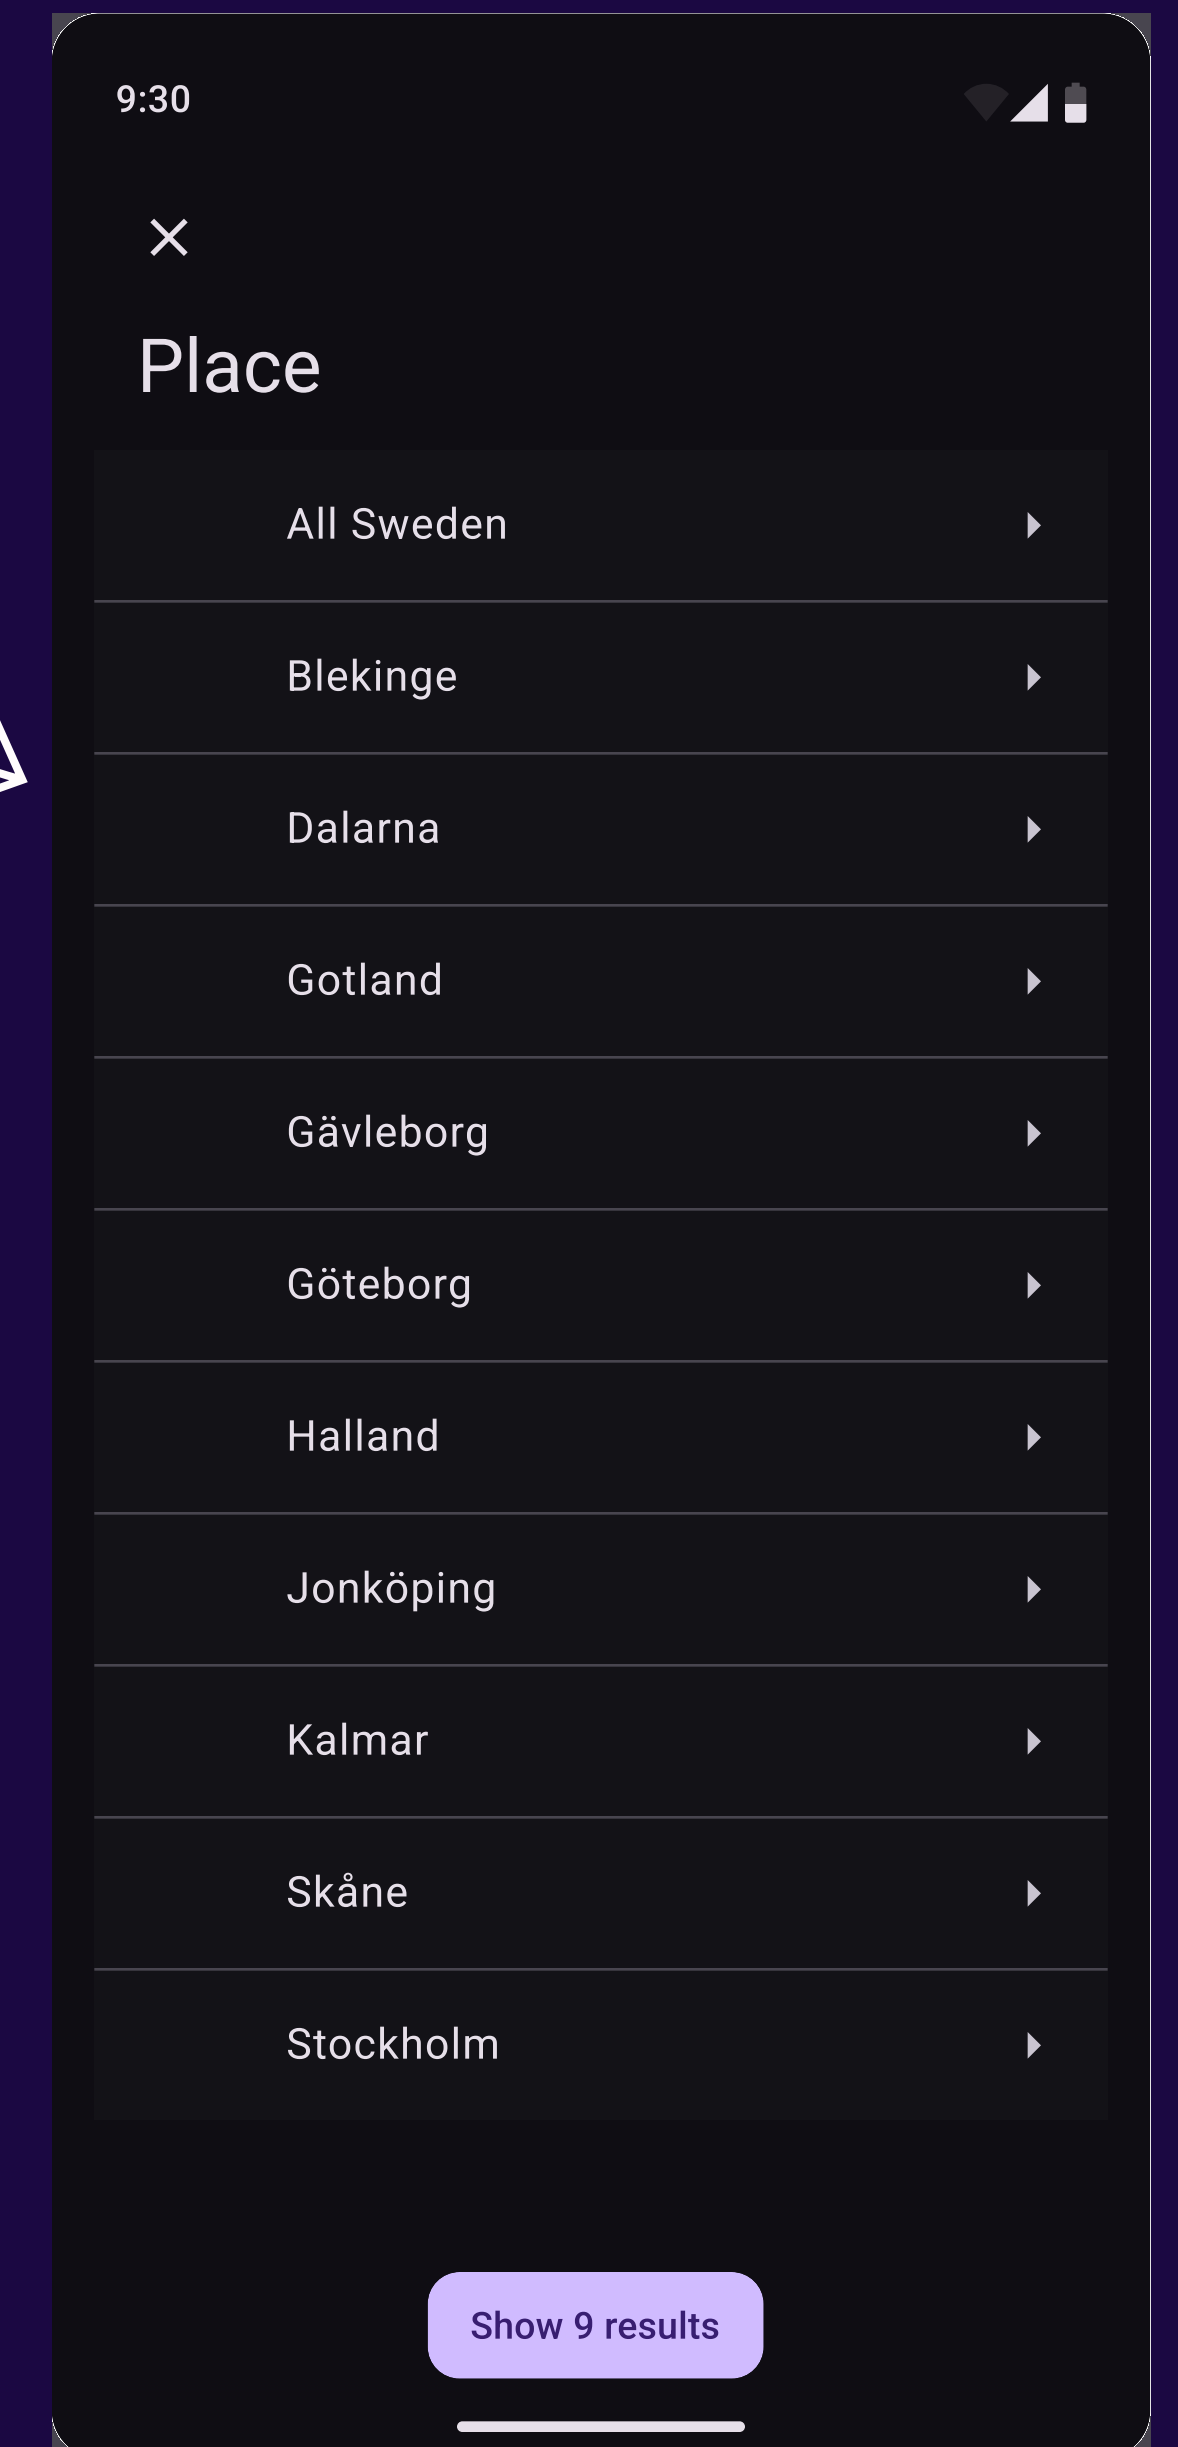

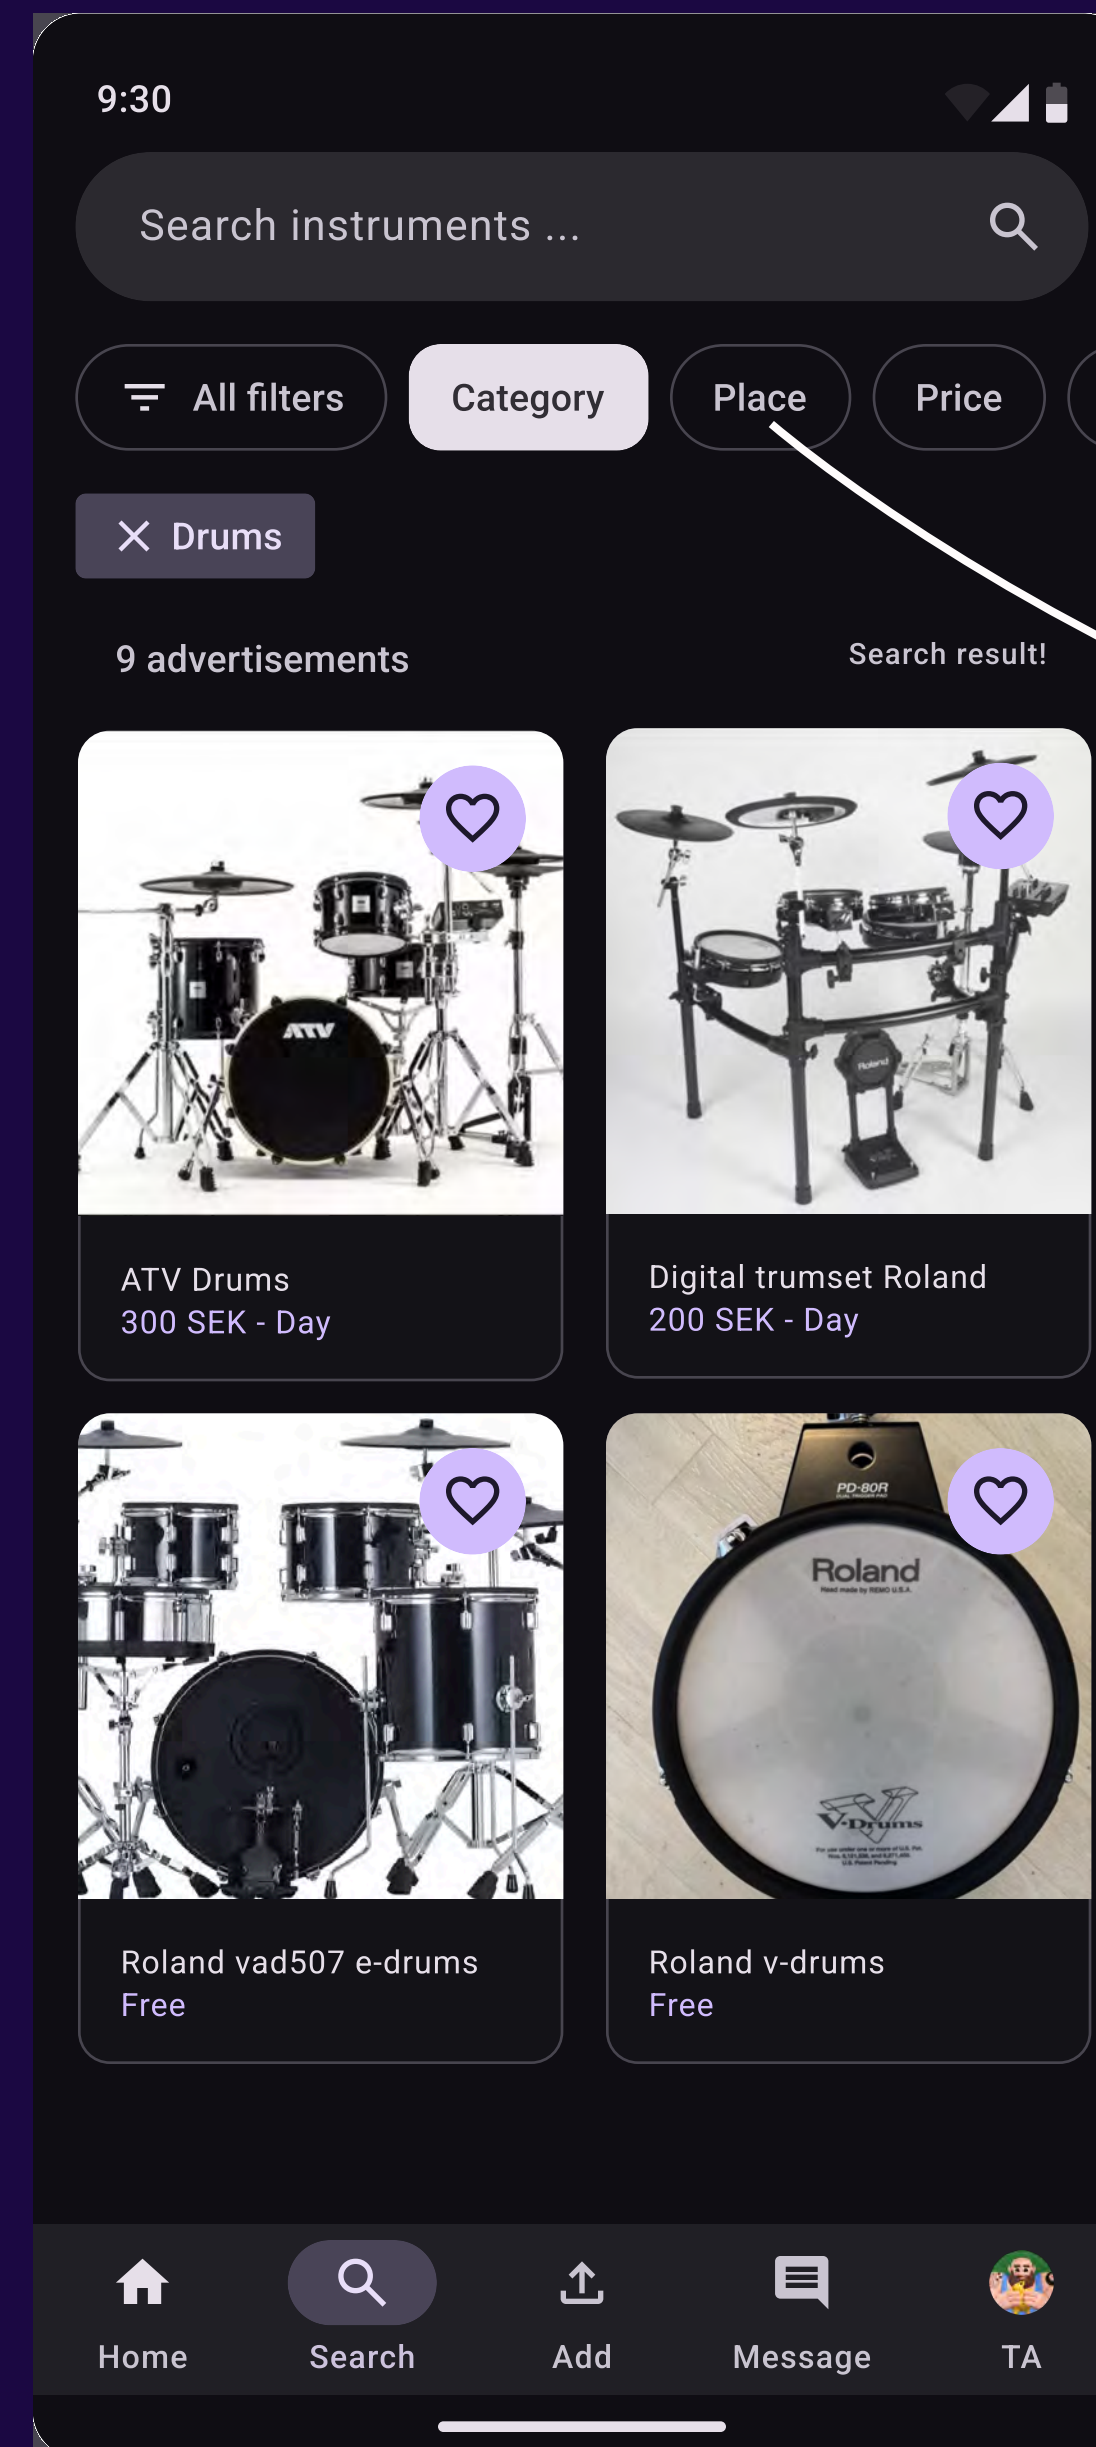

App Bar component in Small configuration, including a "Close" icon on the left side to close the page, and a headline text that reads "Place."

11 List Item (0 Density) components, each with:

- Condition: 1 line
- Leading: Monogram
- Trailing: Icon

Additionally, dividers are placed between each list item.

A Button in the primary colour positioned at the bottom.

Price from filter bar

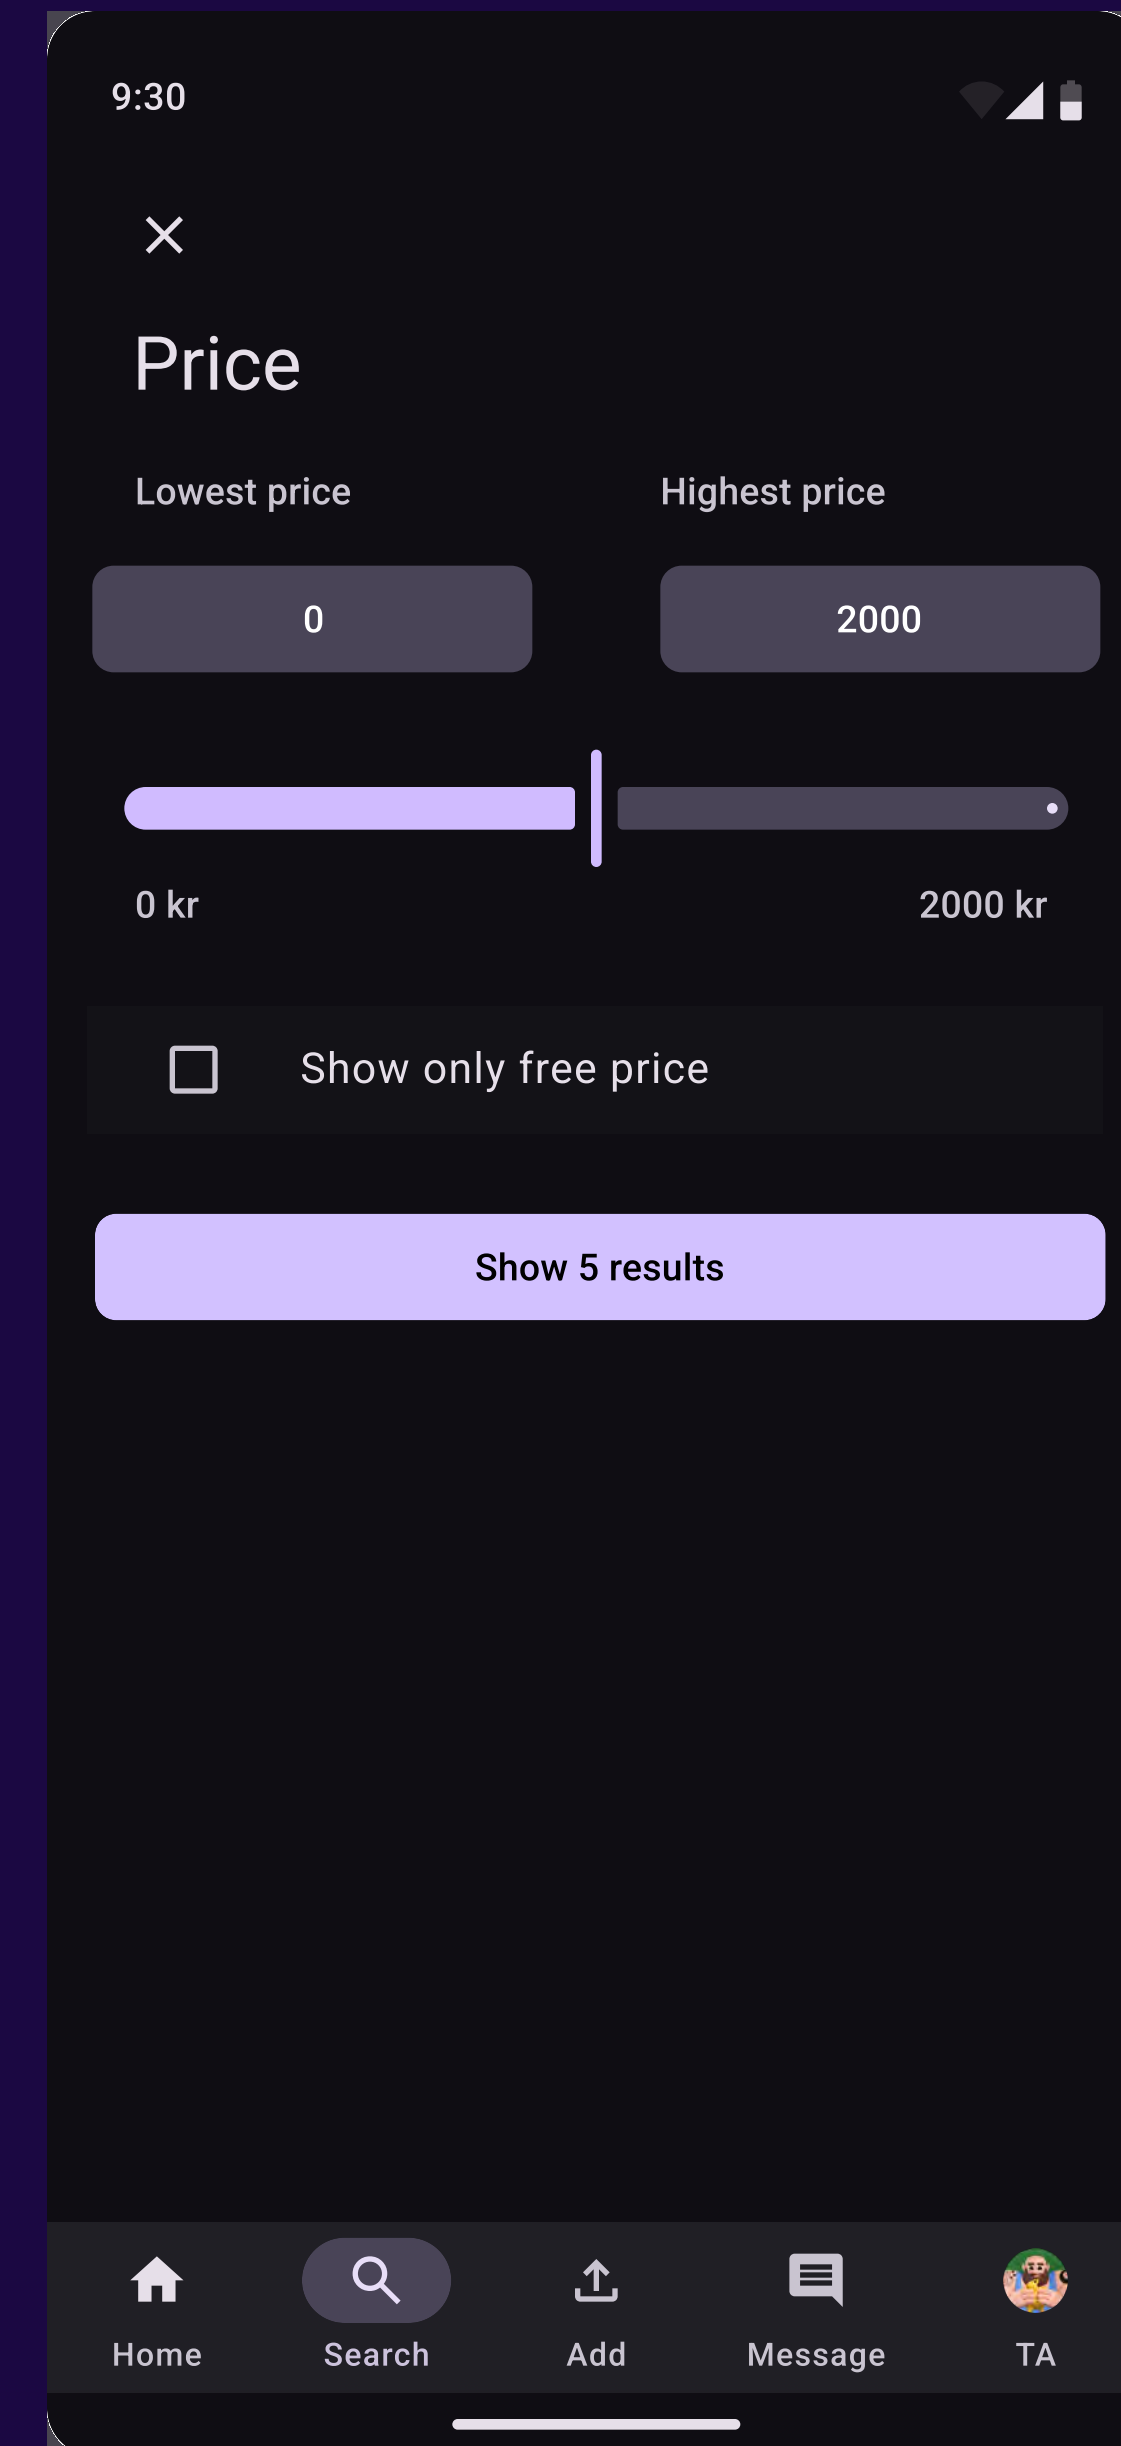

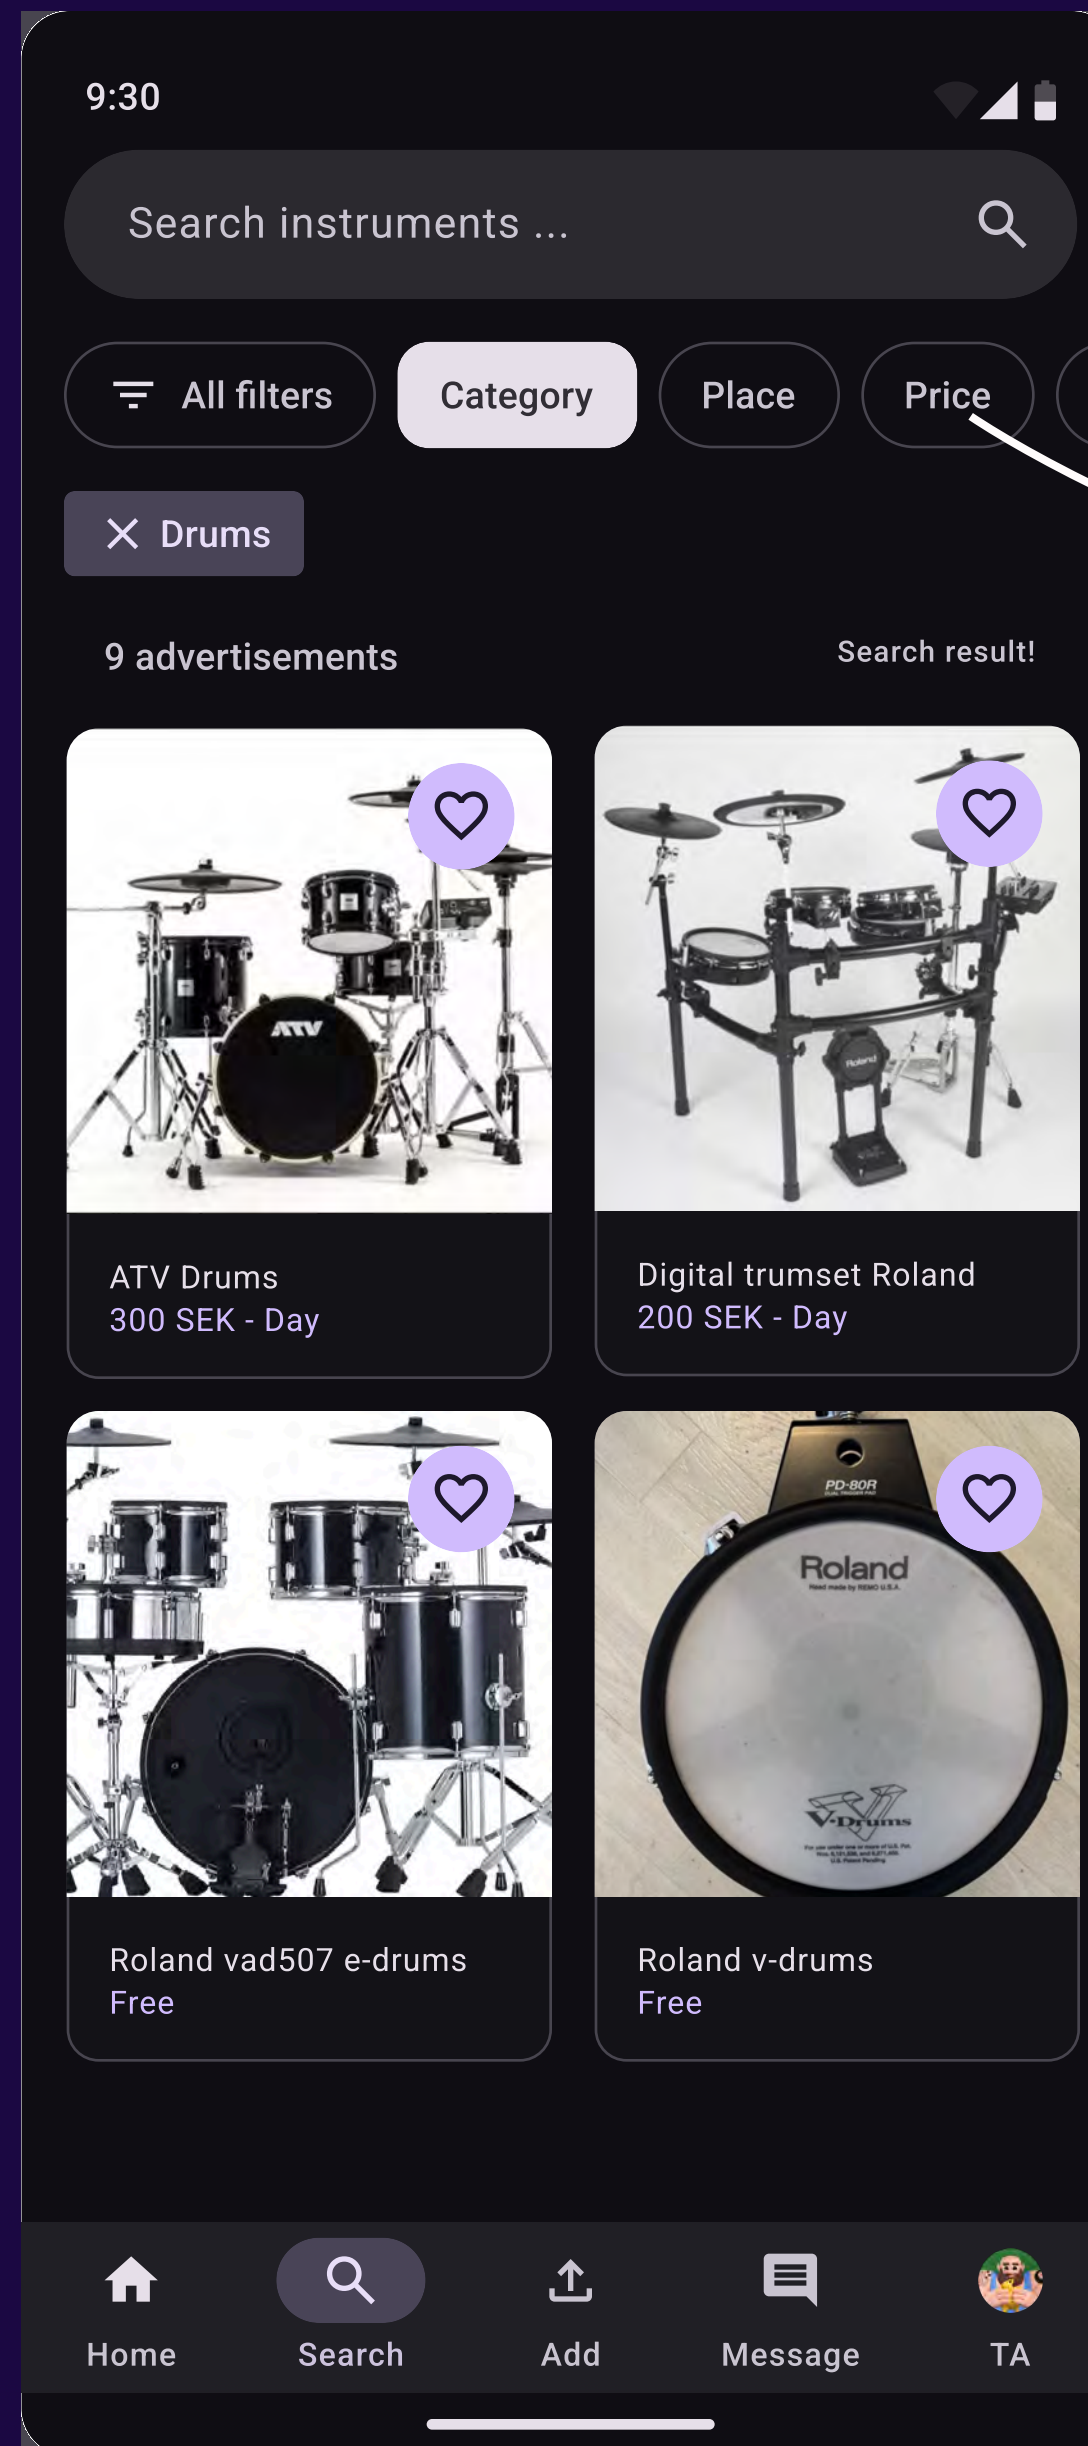

Purpose:

The user can filter ads by price using the Price option in the filter menu, sorting items from lowest to highest. In addition, the user can choose to view only free items to see all instruments available for trading or giveaway.

Composition:

From top to bottom:

- App Bar component in Small configuration, including a "Close" icon on the left side to close the page, and a headline text that reads "Price."
- Two section header in same horizontally raw.
- under there are two small buttons in same horizontally raw.
- Horizontal x-small Slider component.
- Two section header in same horizontally raw.
- List Item 2 Density component with check box on the left side.
- Small button Primary filled colour.
- Navigation Bar.

Free price from filter bar

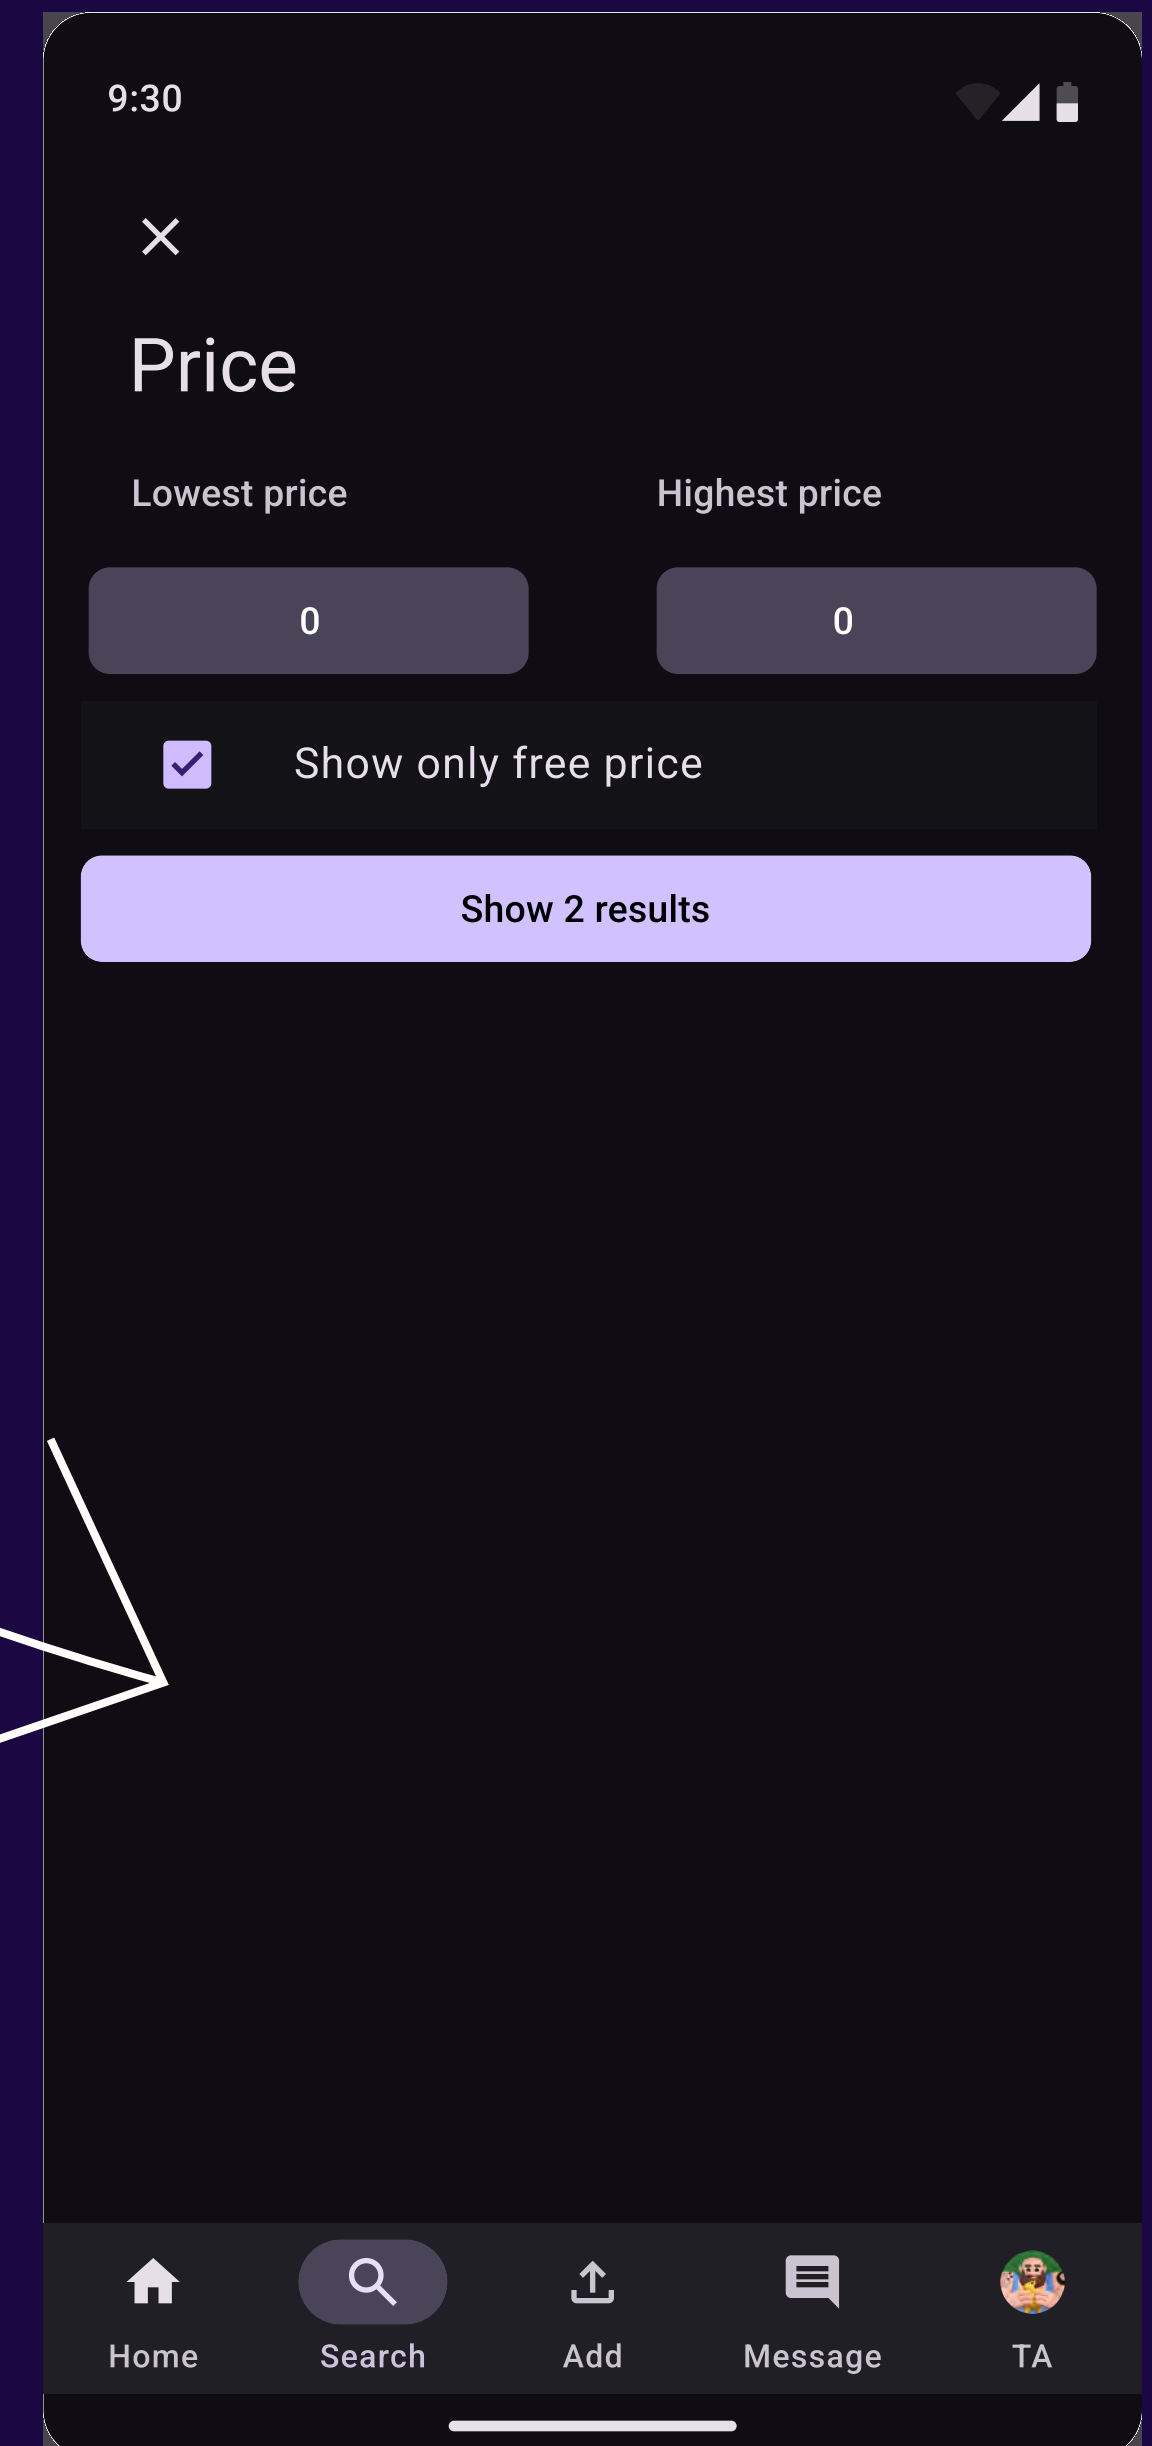

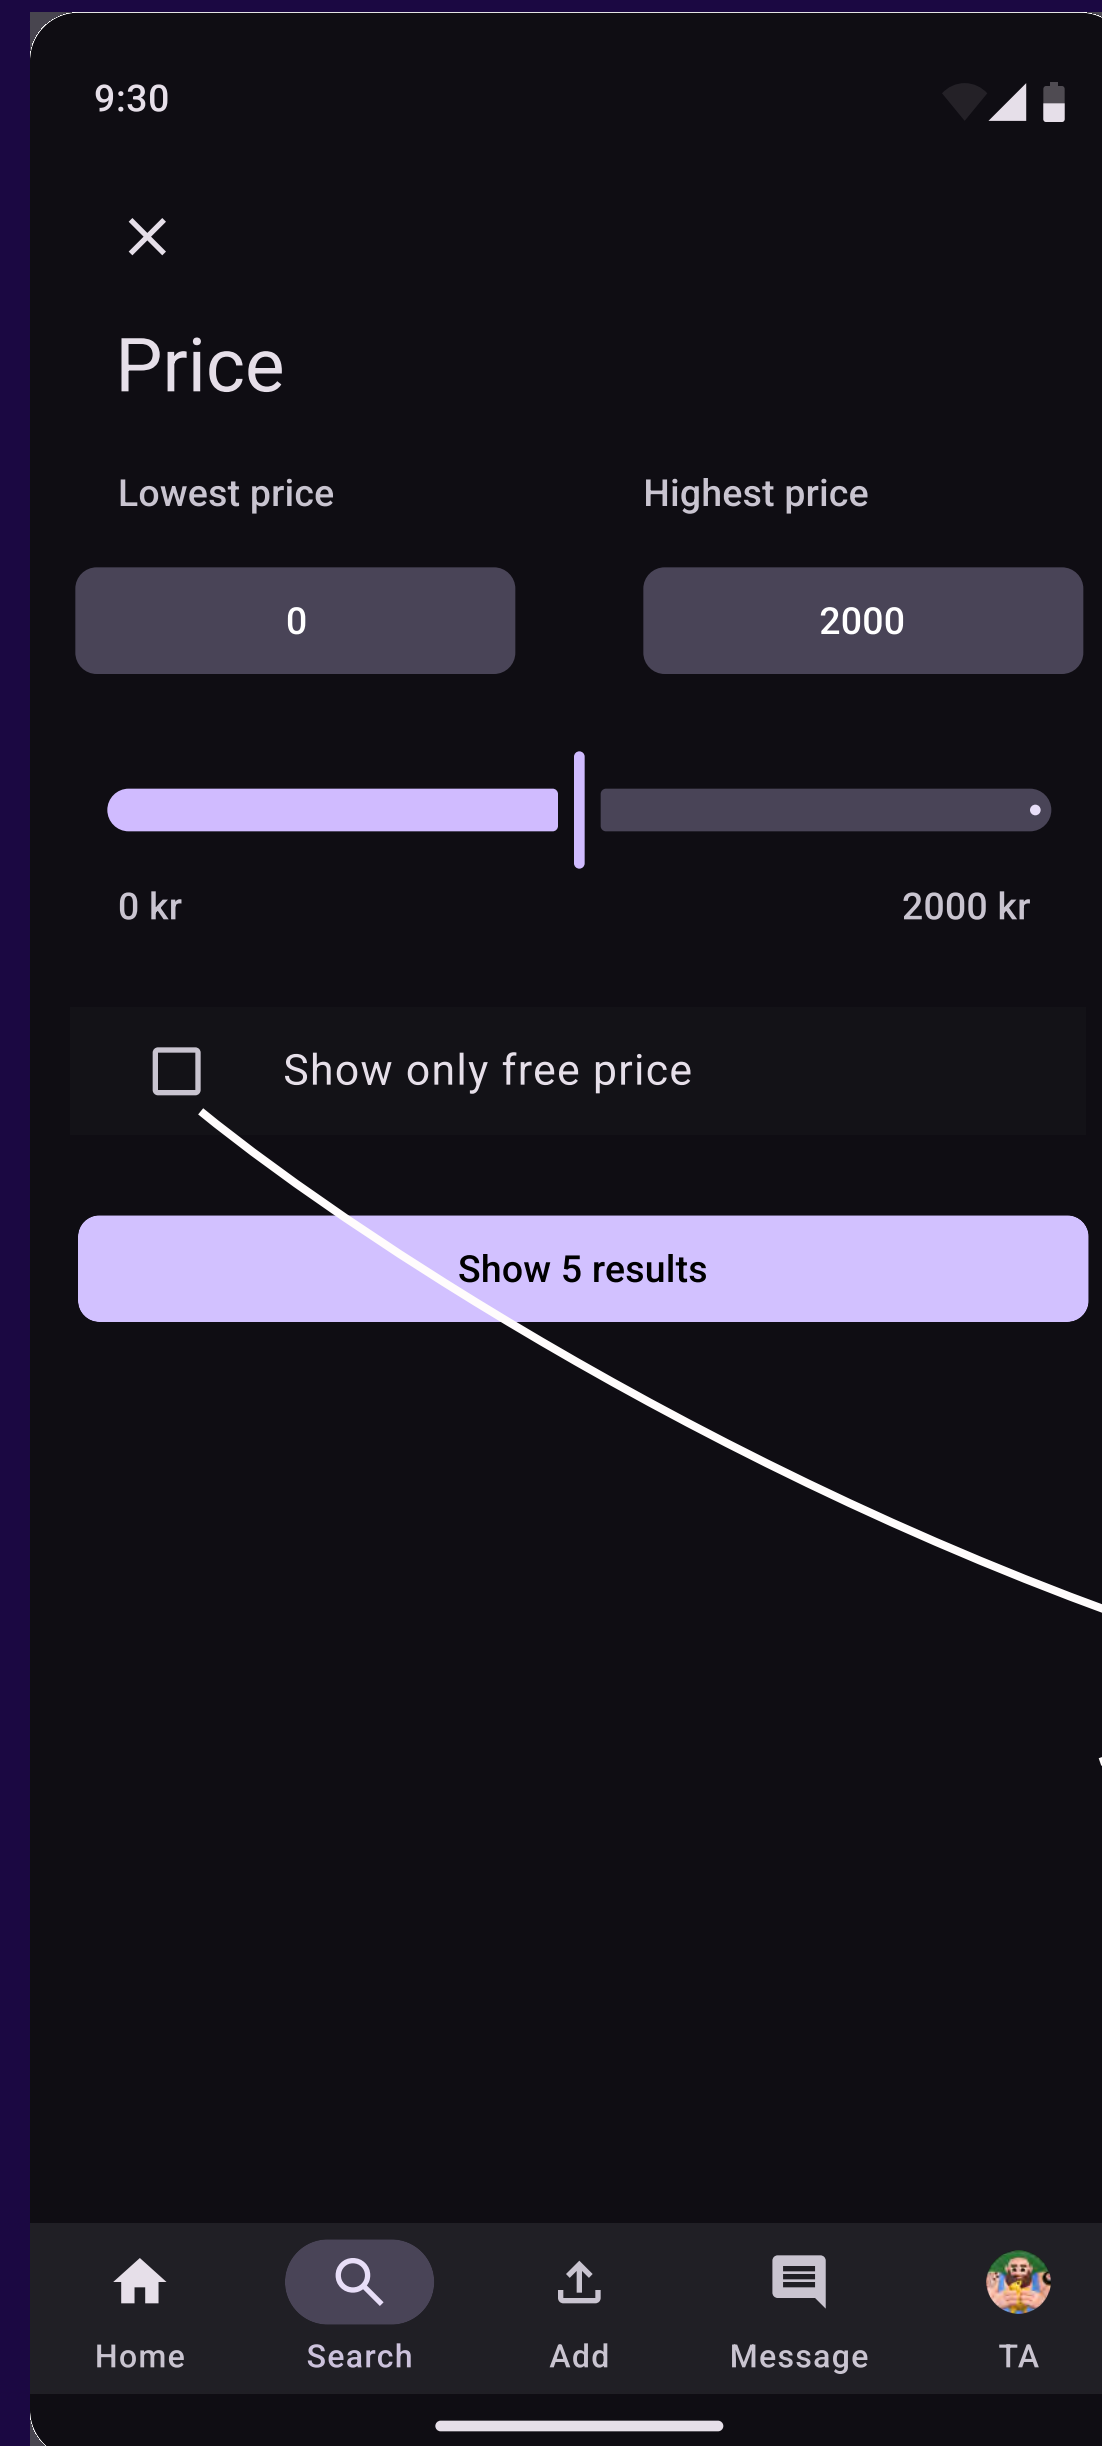

Purpose:

If user click the check box for “Show only free price”, the system will hide the Slider component as feedback that price is 0 or free.

Composition:

From top to bottom:

- App Bar component in Small configuration, including a “Close” icon on the left side to close the page, and a headline text that reads “Price.”
- Two section header in same horizontally raw.
- under there are two small buttons in same horizontally raw.
- Two section header in same horizontally raw.
- List Item 2 Density component with check box on the left side.
- Small button Primary filled colour.
- Navigation Bar

Date from filter bar

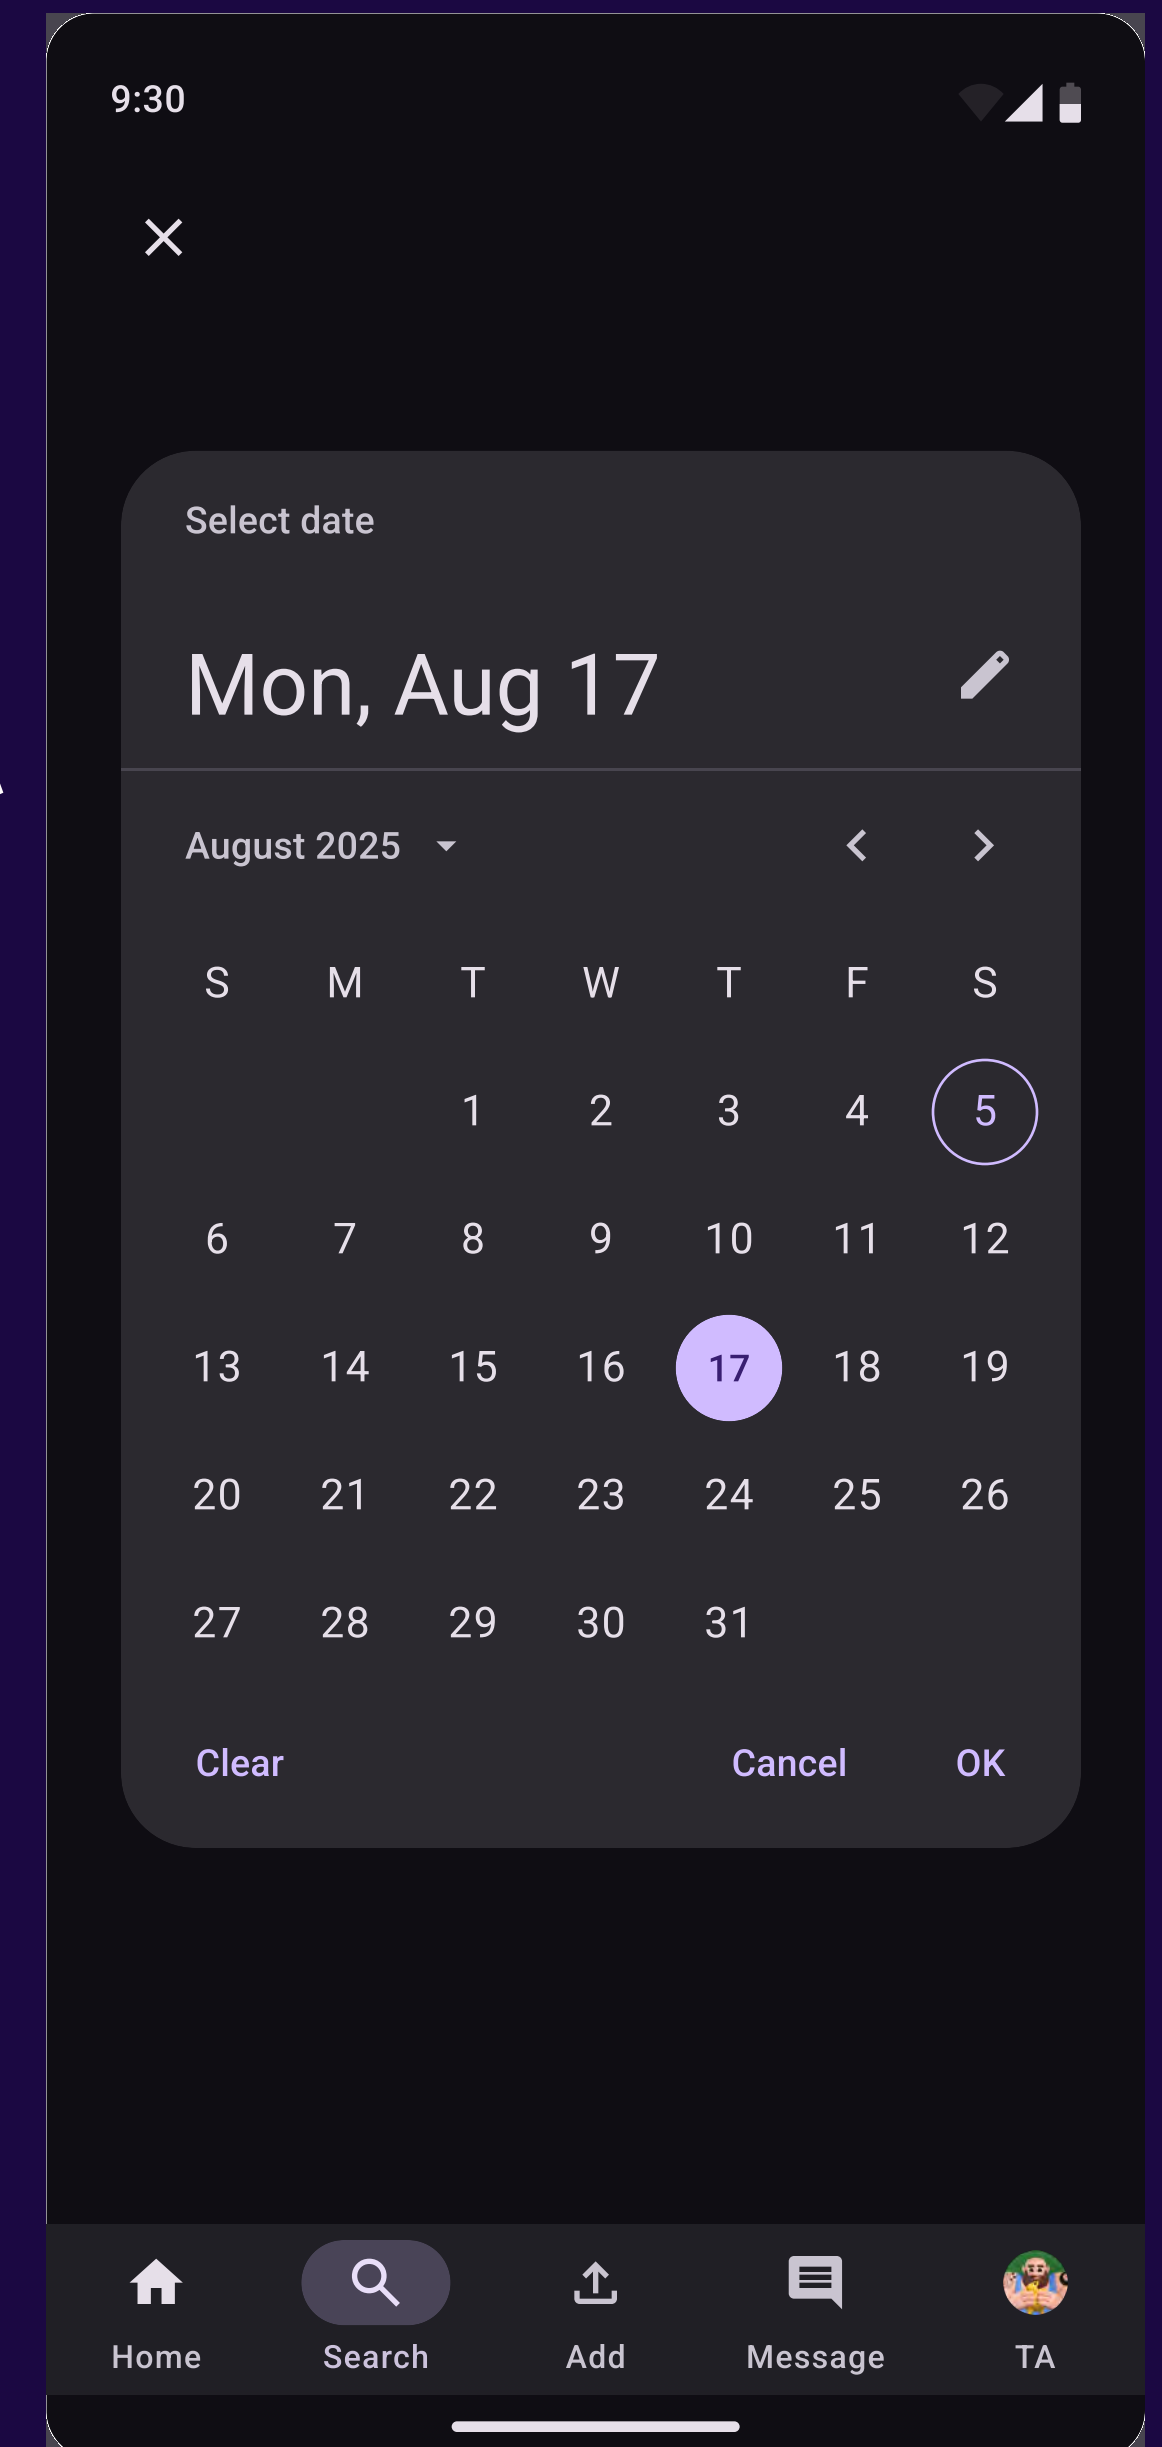

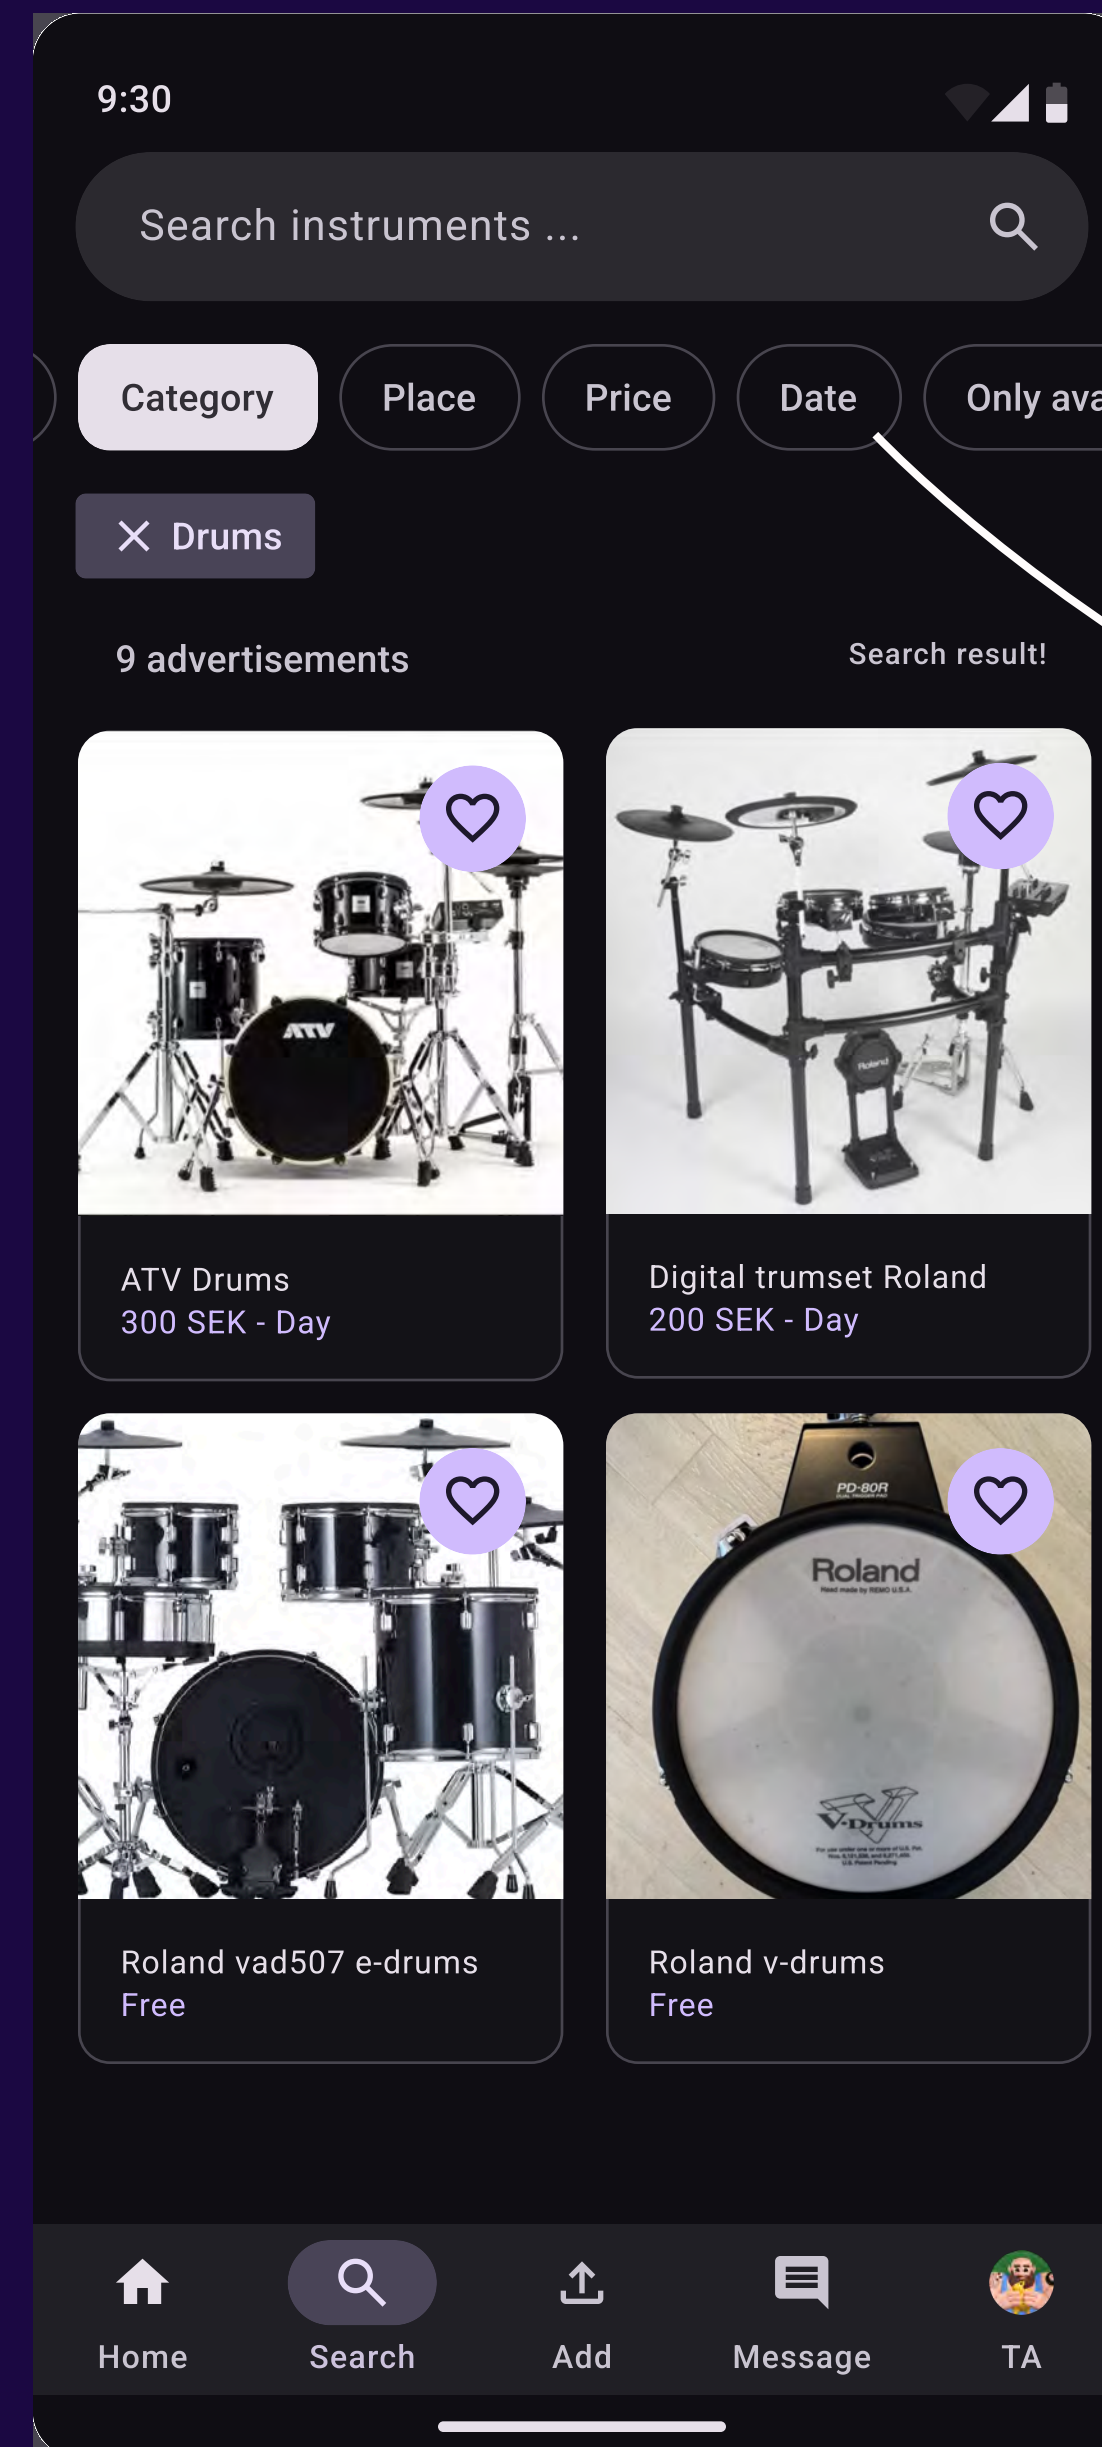

Purpose:

The user can filter ads by date using the Date option in the filter menu. By selecting a specific date range, the system displays only the instruments available during the chosen period.

Composition:

From top to bottom:

- App Bar component in Small configuration, including a “Close” icon on the left side to close the page.
- The Modal Date Picker DM3 component is modified to allow selection of dates up to 24 months ahead.
- Navigation bar.

All filter

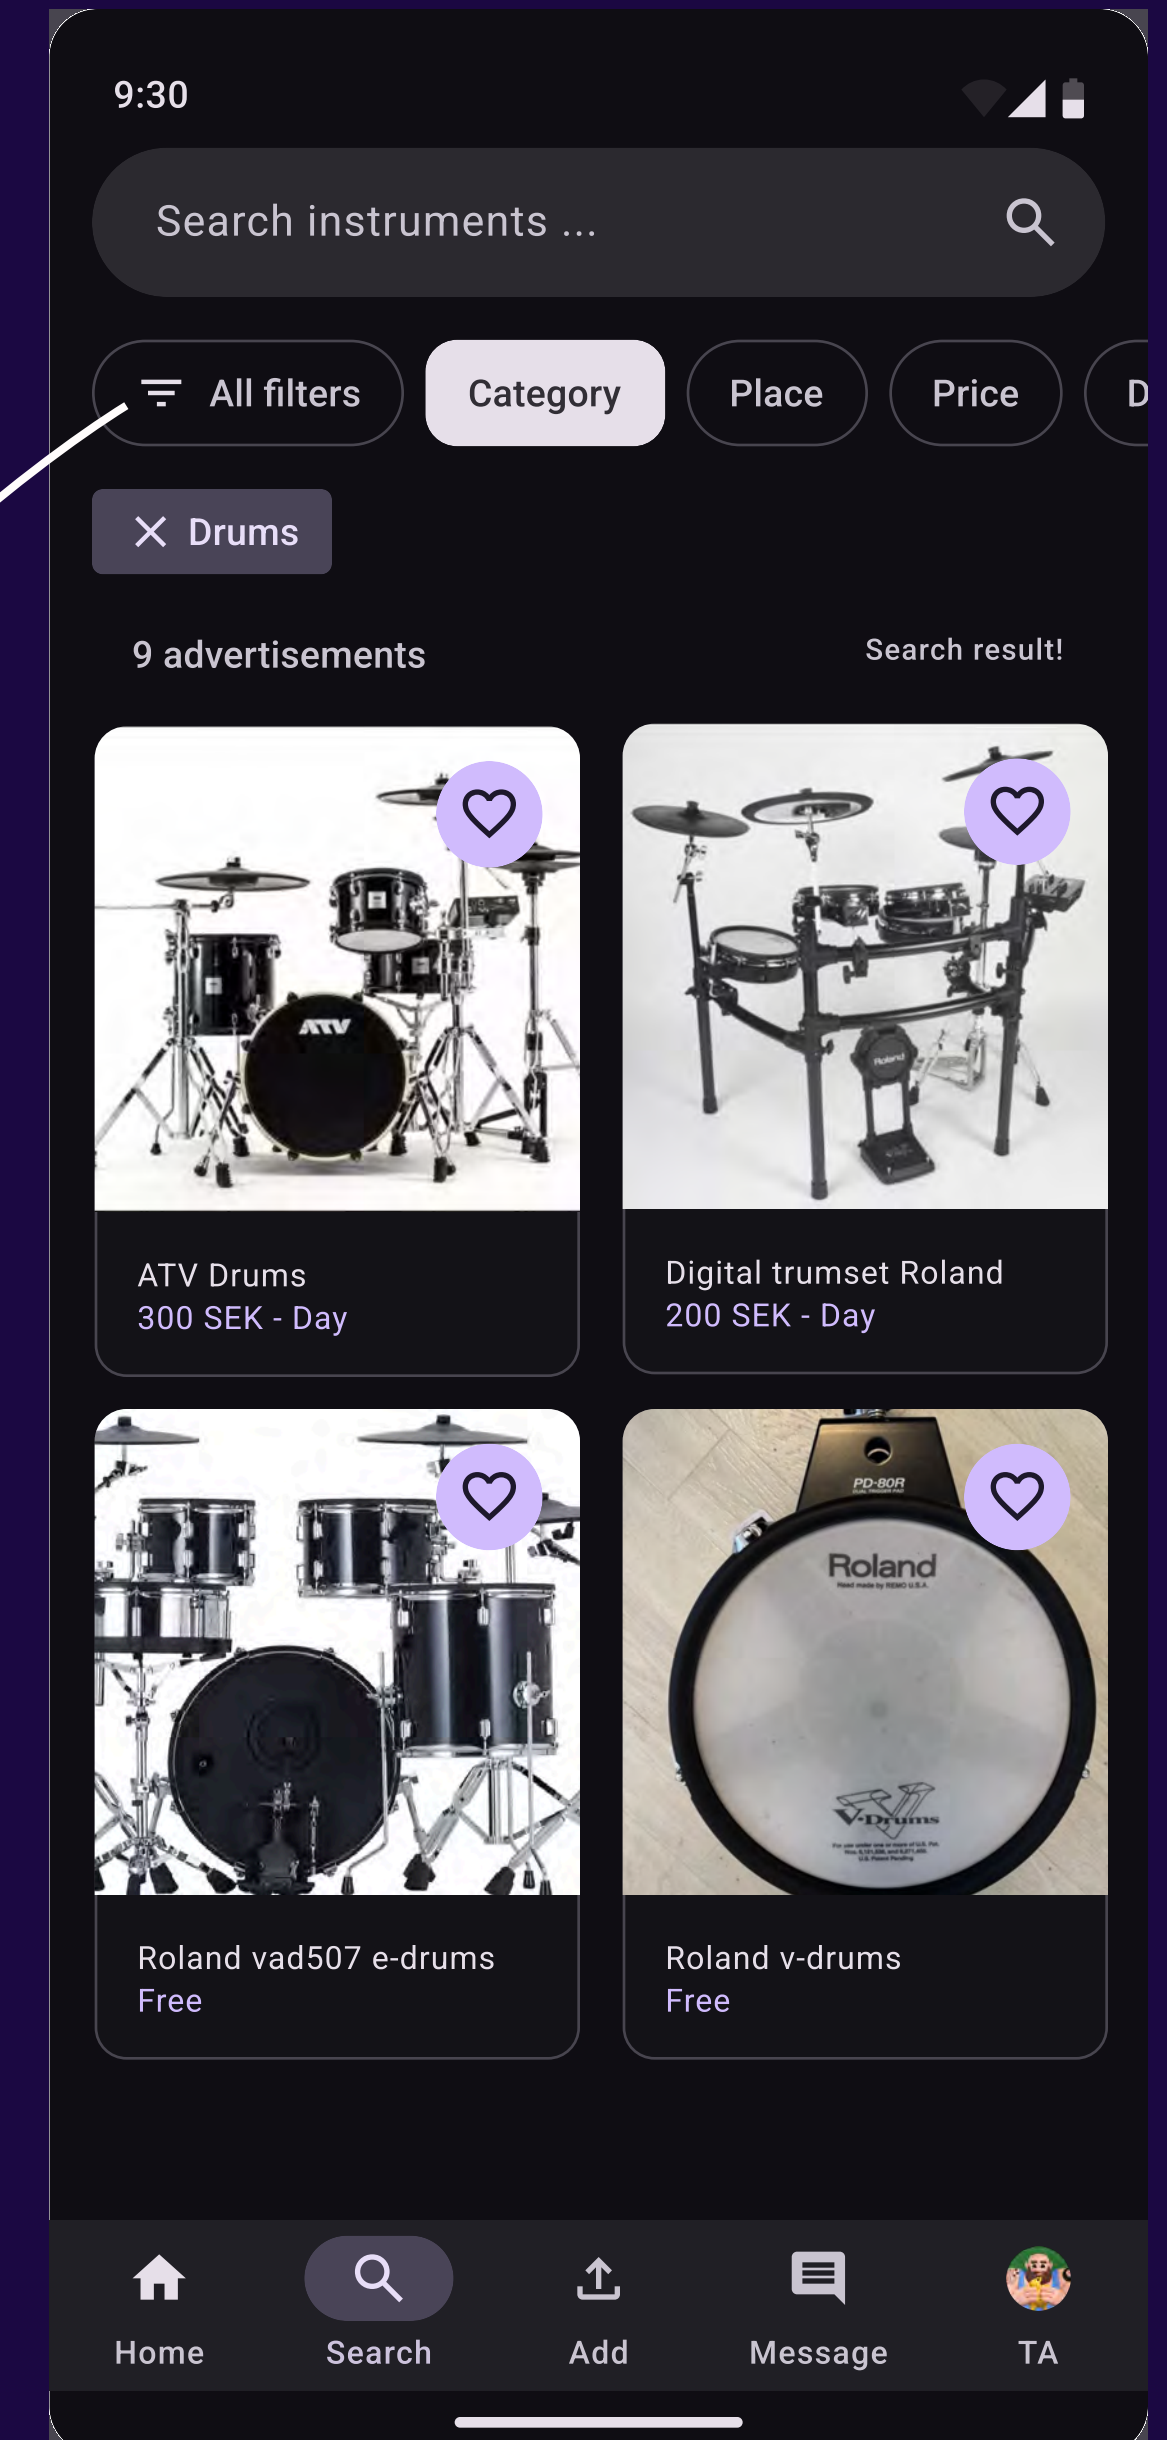

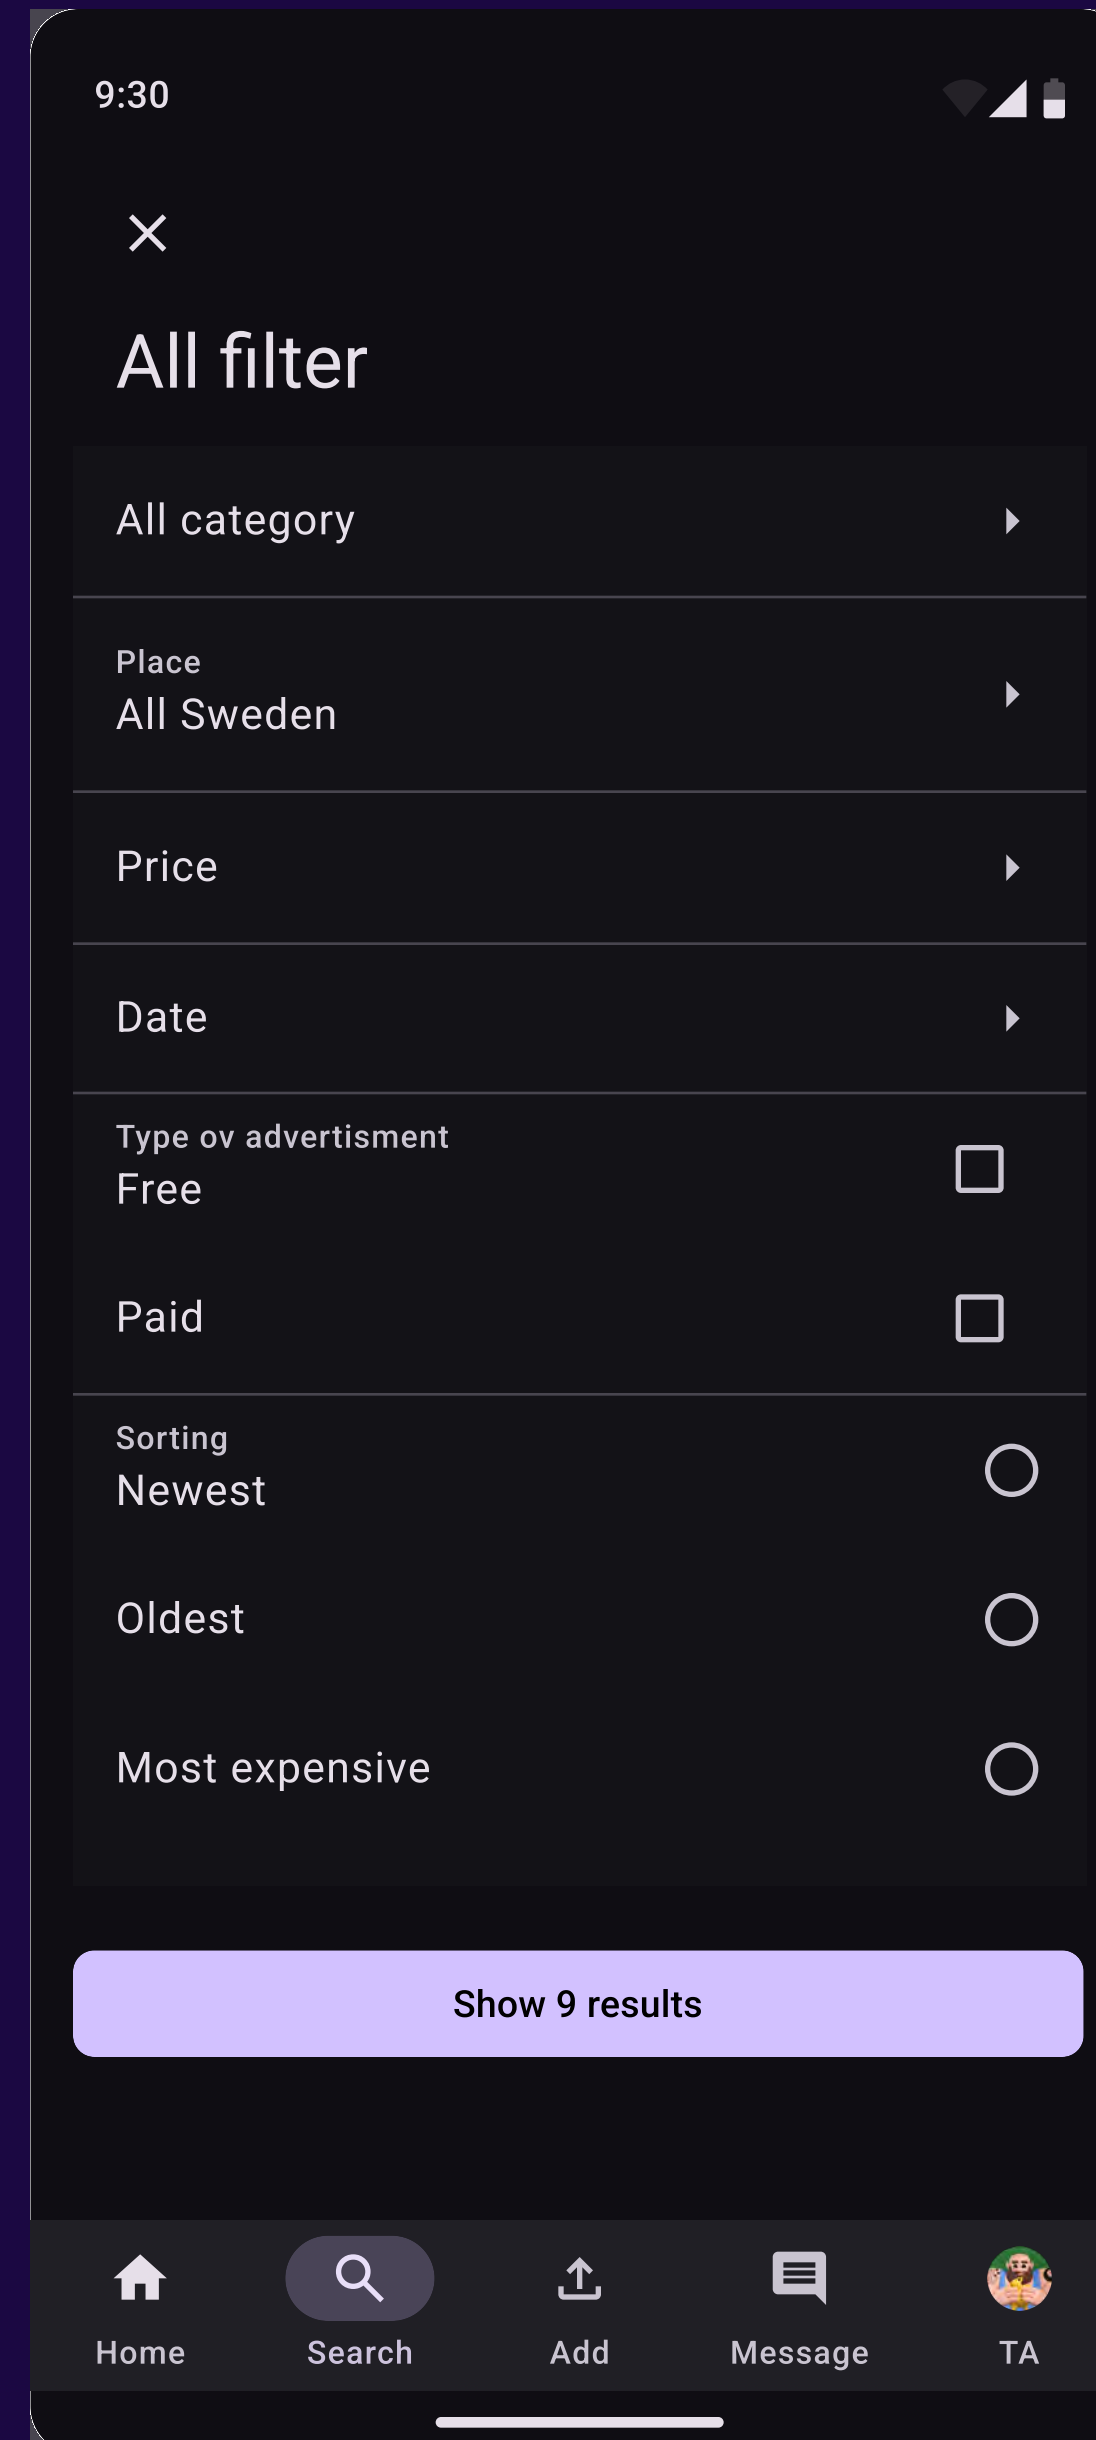

Purpose:

There is option to see all filter list in order to select multiple option at the same time. If the user satisfied with these filter can click show results button.

Composition:

From top to bottom:

- App Bar component in Small configuration, including a "Close" icon on the left side to close the page, and a headline text that reads "All filters."
- 9 List Item components:
 - a. One line with icon and visible divider
 - b. Two lines with icon and visible divider
 - c. One line with icon and visible divider
 - d. One line with icon and visible divider
 - e. Two lines with checkbox and hidden divider
 - f. Two lines with checkbox and visible divider
 - g. Two lines with radio button and hidden divider
 - h. One line with radio button and visible divider
 - i. One line with radio button and visible divider
- 24 dp space below
- Small Button in primary colour.
- Navigation bar.

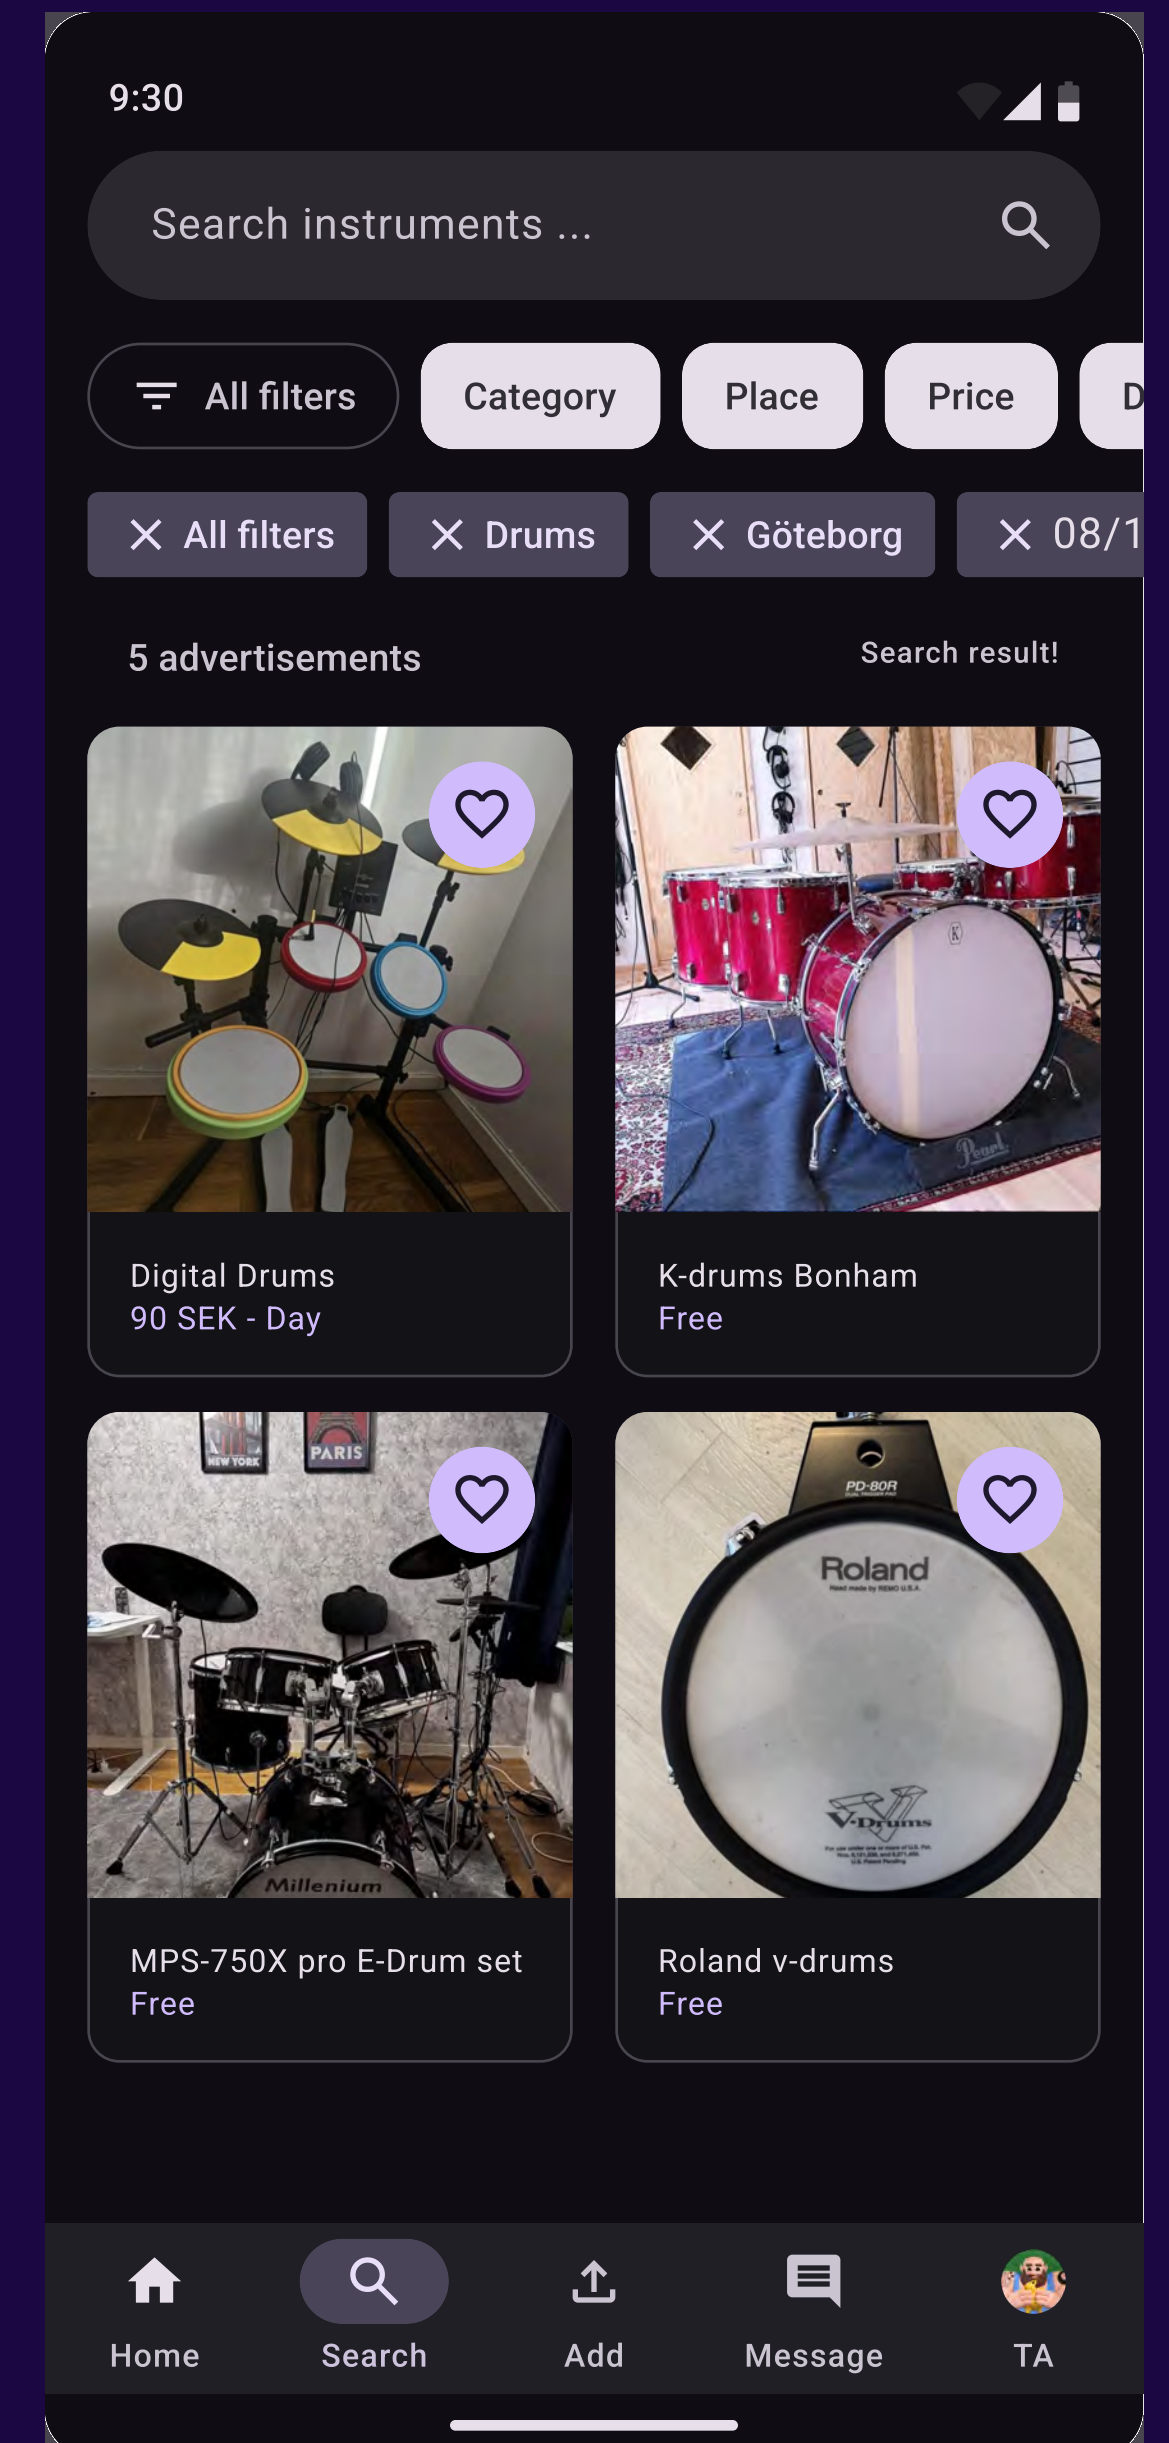

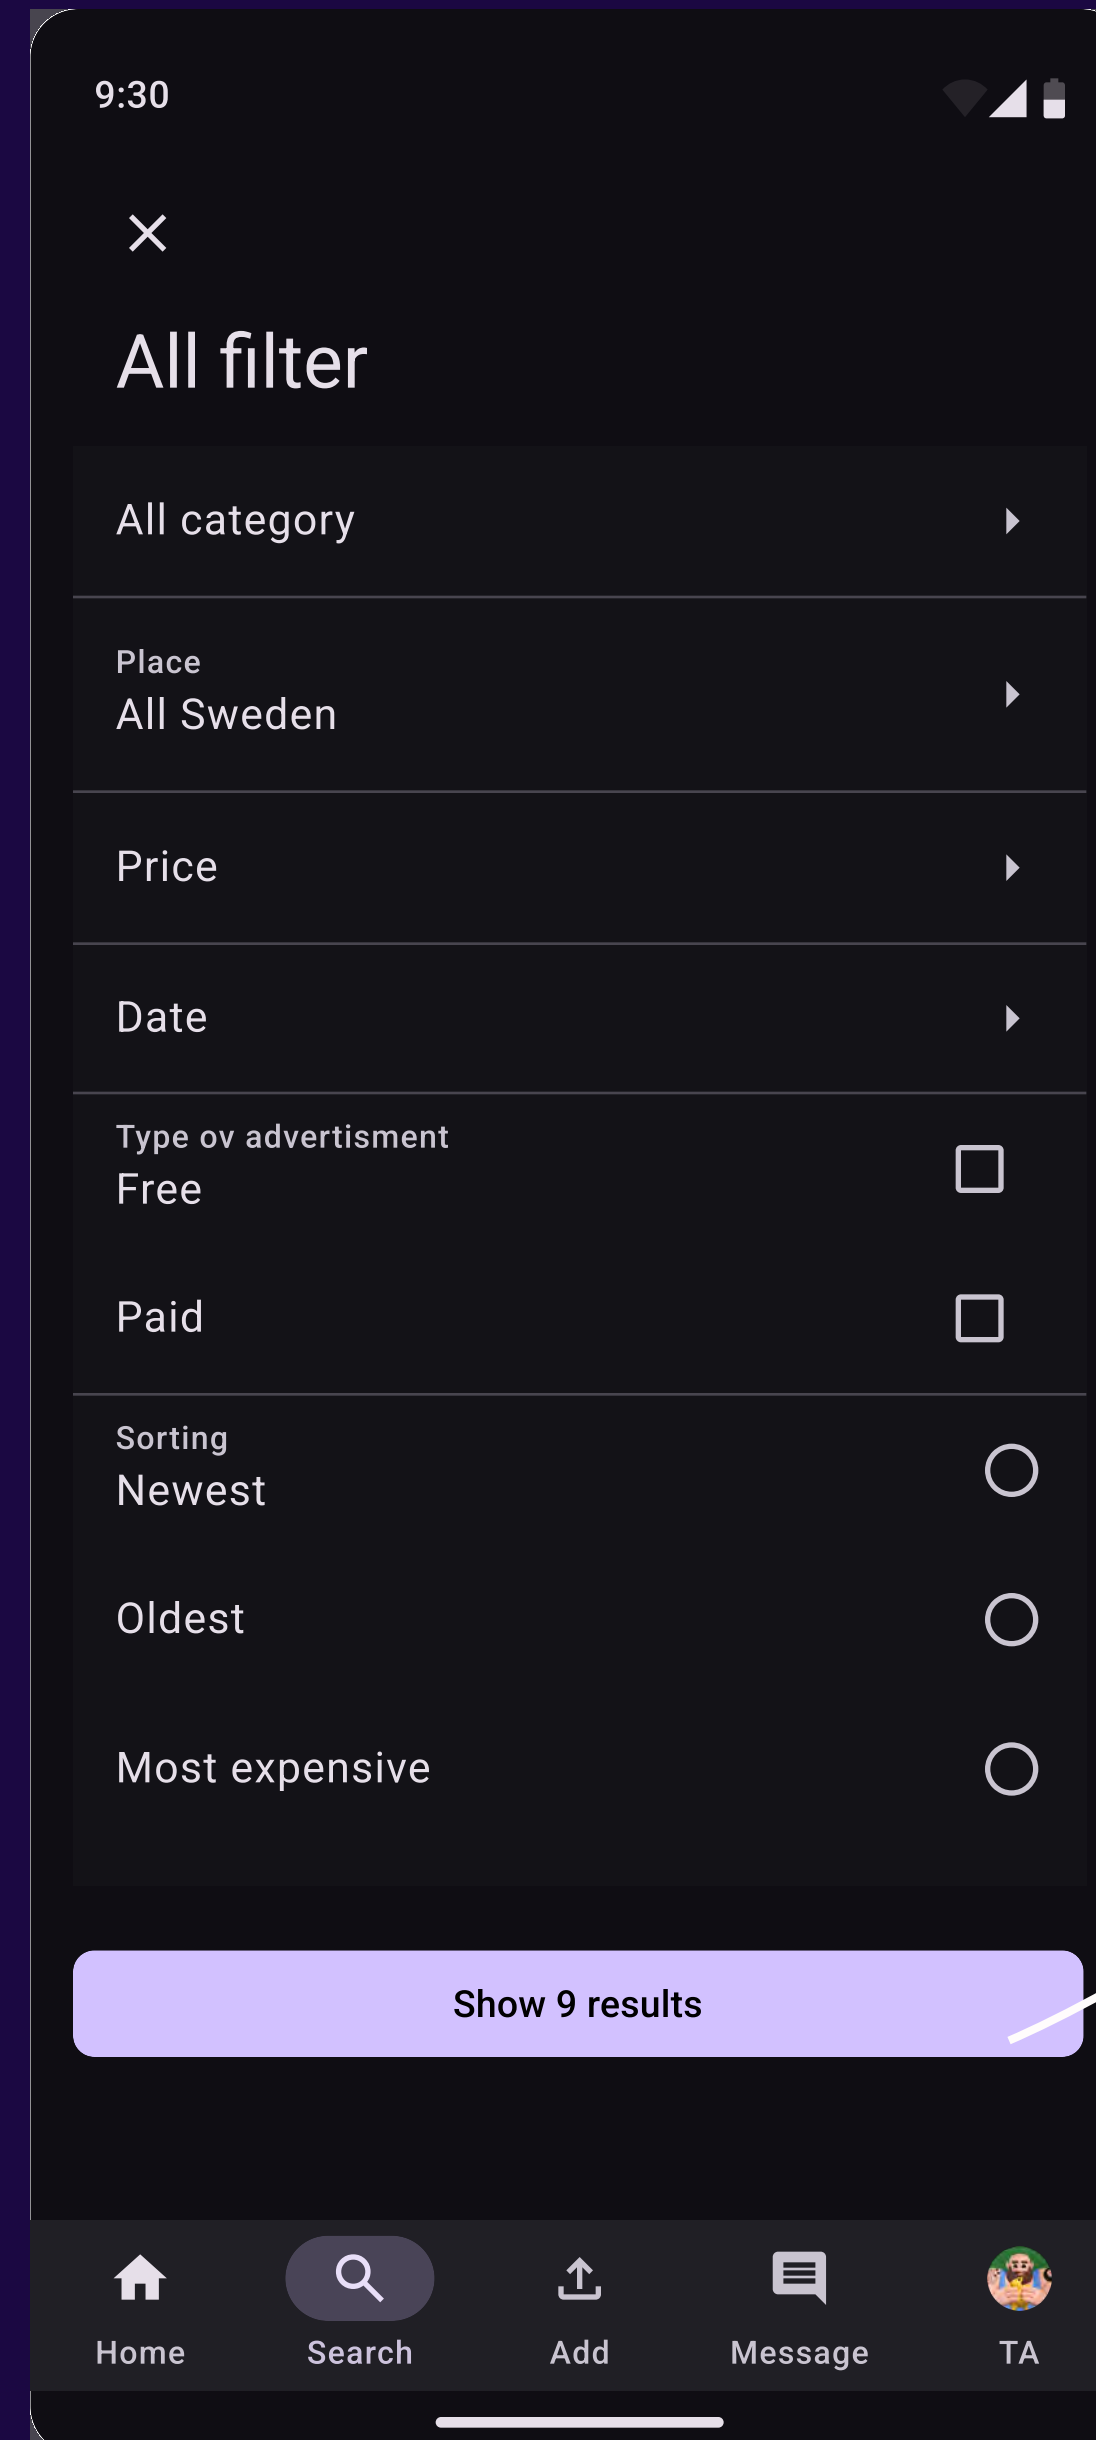

All filter

Purpose:

If any filter is active user will see feedback in form of Button under the filter bar to remember that you have select the unit and set this value. In the Figure 6, the user had chosen the category is Drums and The place is Göteborg and The available date is 08/17/2025.

There is an option to delete any of these filter by click x over the button or delete all filter button to go back to the category selection state.

Add advertisement

Purpose:

This unit allow users to list an instrument for renting or trading. By clicking the add button from the Navigation Bar, User will navigate to Create new advertisement page. There are information user need to fill it in order to list the ad which including. Choose category, Describe your instrument and adding max 8 pictures, selecting the prices, writing the pick up address and finally click Post advertisement.
